**Atlas of Postmortem Angiography** Silke Grabherr,Jochen M. Grimm,Axel Heinemann.2016-04-11 This atlas of postmortem angiography provides a summary of techniques that have been developed and used in order to visualize the human vascular system. The indications, advantages, limitations, and pitfalls of the different techniques are explained in detail through the use of examples from real cases and a wealth of informative images, as well as knowledge from the latest scientific works. Helpful recommendations are made concerning interpretation of the obtained radiological images, which will allow readers to start their own work in the field of post-mortem angiography or to ease and improve their practice. The atlas has been edited and written by members of an international working group created in 2012, "Technical Working Group Post-mortem Angiography Methods" (TWGPAM), who for the first time summarize their experiences concerning this new approach. Since findings explaining the reasons for both natural and traumatic death are often hidden within the vascular system, post-mortem angiography is of the highest importance in elucidating cause of death and may represent the key to minimally invasive autopsy.

**Intracellular Cholesterol Trafficking** T.Y. Chang,Dale A. Freeman.2012-12-06 INTRODUCTION AND RATIONALE FOR INTRACELLULAR CHOLESTEROL TRAFFICKING This volume is an elaboration of an earlier small meeting held in St. Louis, Missouri. In April 1997, many of the authors met for a two-day meeting devoted entirely to intracellular cholesterol trafficking. The rationale for this meeting was that investigators interested in this topic worked in a variety of fields, and rarely, if ever, all met together. Everybody knew each other's papers but mostly worked in isolation from one another. Understanding of cholesterol trafficking also appeared to have reached the point where it would start to rapidly expand beyond these few laboratories. Understanding of cholesterol trafficking was moving from a largely descriptive science into the molecular age. It seemed a good time to get together and see how much we agreed upon up to this point. More authors contributed to this volume than attended the St. Louis meeting. That meeting was generously funded by

grants from Bristol-Myers Squibb, Merck and Company and Parke-Davis, however, the total funding available limited the size of the meeting. For the book, we are not so limited and have tried to be as inclusive as possible and pretty much invited everyone who is presently active in this area. We were quite fortunate to successfully recruit the authors we sought for each of these chapters. The authors and their contributions can be organized by particular interests and particular areas of expertise.

**Transvenous Lead Extraction** Maria Grazia Bongiorno.2011-09-06 In the last years, indications for defibrillators and cardiac resynchronization therapy have expanded enormously; for this reason, and also due to the extension of human life length, the number of patients with implanted cardiac devices have steadily increased. The leads implanted for the functioning of these devices, however, have a limited duration in time and more and more their extraction will be a frequent issue in clinical practice, in order to treat short- and long-term complications, such as infections and failures. Aim of this book is to provide readers with a state-of-the-art on lead extraction techniques. The chapters deal with leads characteristics, indications to lead removal, patient preparation, tools and techniques for extraction, and prevention and management of complications. In addition, a series of tips and tricks on how to treat some particular conditions (tight cost-clavicular space, fractured leads, ICD leads, endangered leads...etc.), are given. A new extracting technique, according to which the extraction is performed through the internal jugular vein is described; several examples are included and many figures provide a thorough depiction of this innovative procedure. The volume will be an excellent resource for all those involved in the management of cardiac patients: cardiologists, arrhythmologists, cardiac surgeons, GPs, pediatricians, and post-graduate students in these disciplines.

Treatment of Metastatic Melanoma Rachael Morton.2011-10-05 Surgery continues to be the mainstay treatment for melanoma localized to the primary tumor and/or lymph nodes. Results from randomized controlled trials indicate that sentinel node biopsy for the treatment of cutaneous melanoma of intermediate thickness has a beneficial effect on recurrence rates, and adjuvant radiotherapy to regional lymph node fields following surgical resection reduces loco-regional recurrence in patients at high risk of relapse. Isolated limb perfusion, electrochemotherapy, and photodynamic therapy continue to be evaluated for treatment of stage IV disease. However, the greatest excitement in new treatment has been with targeted therapies for genetic mutations. In particular, the promising results of partial and complete tumor response in stage IV disease from early phase trials of the B-RAF kinase inhibitors. This book provides a contemporary insight into the therapeutic treatment options for patients with metastatic melanoma and is relevant to clinicians and researchers worldwide. In addition, an update on current clinical trials for melanoma treatment has been included, and two chapters have been reserved to discuss the treatment of oral and uveal melanoma.

**Nutraceuticals and Health** Somdat Mahabir,Yashwant V. Pathak.2016-04-19 Although health claims for nutraceuticals range from the fantastic to the sublime, most of these claims are based on cell culture studies and have not been validated in humans, making them inadequate for public health recommendations. Focusing on human population-based research (epidemiology studies), Nutraceuticals and Health: Review of Human Evidence explores the role of nutraceuticals in human health, disease prevention, health promotion, and as an adjunct to disease treatment. The editors and their team of recognized experts deliver a comprehensive scientific review of the latest research. The book opens with a general background of nutraceuticals and human health, then covers health and disease areas such as cancer, lipidemia and cardiovascular disease, metabolic syndrome with obesity, diabetes and hypertension, respiratory health, the gut microbiome, and cognitive decline. It then concludes by addressing the methodological issues that must be addressed in the conduct of epidemiological research on nutraceuticals in health and disease. Although nutraceuticals hold significant promise in alleviating the suffering from disease, for this potential to be fulfilled, much more research is needed to document safety and disease risks in humans. Addressing important knowledge gaps, the book includes cutting-edge summaries that highlight both the biological and epidemiological findings of relevant studies of nutraceuticals in health and disease. Taking an unusual, yet crucial epidemiological focus, it examines whether, and what kinds of, evidence exist to support a role for nutraceuticals in disease risk, prevention, and treatment.

Initially envisaged as a palliative technique for inoperable patients, it now offers high-risk patients a viable alternative to surgery. Several techniques are also available of transcatheter mitral valve repair, and initial cases of transcatheter mitral valve replacement have also been reported: the interest in these techniques is such that further significant technological advances are expected to be seen over the next few years. This highly informative, easy to read, and carefully structured guide provides interventional cardiologists with updated knowledge on the application of transcatheter techniques to cardiac valves.
