State of the World 2010 Worldwatch Institute. 2013-07-04 Many of the environmental and social problems we face today are symptoms of a deeper systemic failing: a dominant cultural paradigm that encourages living in ways that are often directly counter to the realities of a finite planet. This paradigm, typically referred to as 'consumerism,' has already spread to cultures around the world and has led to consumption levels that are vastly unsustainable. If this pattern spreads further there will be little possibility of solving climate change or other environmental problems that are poised to dramatically disrupt human civilization. It will take a sustained, long-term effort to redirect the traditions, social movements and institutions that shape consumer cultures towards becoming cultures of sustainability. These institutions include schools, the media, businesses and governments. Bringing about a cultural shift that makes living sustainably as 'natural' as a consumer lifestyle is today will not only address urgent crises like climate change, it could also tackle other symptoms like extreme income inequity, obesity and social isolation that are not typically seen as environmental problems. State of the World 2010 paints a picture of what this sustainability culture could look like, and how we can - and already are - making the shift.

VERSUS: Heritage for Tomorrow Correia, Mariana, Dipasquale, Letizia, Mecca, Saverio. 2014 Vernacular architecture represents a great resource that has considerable potential to define principles for sustainable design and contemporary architecture. This publication is the result of an overall aim to produce a valuable tool for analysis regarding vernacular heritage through different assessments, in order to define principles to consider for sustainable development. This was possible through a comprehensive reflection on the principles established and the strategies to recognise in different world contexts. The present publication was the result of an in-depth approach by 46 authors from 12 countries, concerned with the analysis and critical assessment of vernacular heritage and its sustainable perspective. The book presents 8 chapters addressing operational definitions and synopses advances, regarding the main areas of vernacular heritage contribution to sustainable architecture. It also presents 15 chapters and 53 case studies of vernacular and contemporary approaches in all the 5 continents, regarding urban, architectural, technical and constructive strategies and solutions. **VERSUS, HERITAGE FOR TOMORROW: Vernacular Knowledge for Sustainable Architecture** is the result of a common effort undertaken by the partners ESG | Escola Superior Gallaecia, Portugal, as Project leader; CRAterre | École Nationale Supérieure d'Architecture de Grenoble, France; DIDA | Università degli Studi di Firenze, Italy; DICAAR | Università degli Studi di Cagliari, Italy; and UPV | Universitat Politècnica de València, Spain. Handbook of Ethics, Values, and Technological Design Jeroen van den Hoven, Pieter E. Vermaas, Ibo van de Poel. 2015-06-11 This handbook enumerates every aspect of incorporating moral and societal values into technology design, reflects the fact that the latter has moved on from strict functionality to become sensitive to moral and social values such as sustainability and accountability. Aimed at a broad readership that includes ethicists, policy makers and designers themselves, it proffers a detailed survey of how technological, and institutional, design must now reflect awareness of ethical factors such as sustainability, human well-being, privacy, democracy and justice, inclusivity, trust, accountability, and responsibility (both social and environmental). Edited by a trio of highly experienced academic philosophers with a specialized interest in the ethical dimensions of technology and human creativity, this syncretic handbook collates an array of published material and offers a studied, practical introduction to the field. The volume addresses myriad aspects at the intersection of technology design and ethics, enabling designers to adopt a constructive approach in anticipating, preventing, and resolving societal and ethical issues affecting their work. It covers underlying theory; discrete values such as democracy, human well-being, sustainability and justice; and application domains themselves, which include architecture, bio- and nanotechnology, and military hardware. As the first exhaustive survey of a field whose importance is characterized by almost exponential growth, it represents a compelling addition to a formerly atomized literature.

Urban Design and People Michael Dobbins.2011-08-24 This introduction to the field of urban design offers a comprehensive survey of the processes necessary to implement urban design work, explaining the vocabulary, the rules, the tools, the structures, and the resources in clear and accessible style. Providing a comprehensive framework for understanding urban design principles and strategies, the author argues that urban design is both a process and a collaboration in which the different forces involved are knit together. Moving from the regional scale down to the scale of places, the book examines the goals and strategies of the urban designer from the viewpoints of the private sector, public sector, and community. The text is illustrated throughout with photographs and drawings that make theory and practice relevant and alive.

Sustainable Supply Chains Tonya Boone,Vaidyanathan Jayaraman,Ram Ganeshan.2012-06-07 A sustainable enterprise is one that contributes to sustainable development by simultaneously delivering economic, social and environmental benefits or what has been termed the triple bottom line. While pursuing profit, socially responsible companies should be sensitive to the environment and uphold the rights of all the firm's stakeholders. This edited volume explores leading-edge ideas — both by academics and forward-thinking companies — to (re)design and market products, source, manufacture, and eventually distribute and recover or dispose of them in an environmentally, ecologically, and socially responsible way. This edited volume is made up of fifteen chapters loosely grouped into clusters. After an introduction, chapter 2 shows the greenhouse emissions at various levels, from countries all the way to individual products. Chapters 3-7 each focus on an industrial sector and address issues specific to that industry, with chapter 7 presenting a case study on LEED certification of Miller Hall, home of the Mason School of Business where two of the authors (Tonya and Ram) work. Chapters 8-10 address product take back in the supply chain. Chapter 8 introduces e-waste and surveys what firms are doing to combat it. Chapter 9 provides an overview of existing take-back legislation and academic papers that have studied various research questions associated

with them. Chapter 10 is a tutorial that addresses the problem of product disposition on a closed-loop supply chain: what should a firm do with a product return? Chapters 11-15 address measurement, monitoring, decision-making, and reporting regarding environmental issues in a firm. Chapter 11 provides an academic survey of eco-labeling and the consumer's willingness to pay for them. Chapter 12 discusses how firms can measure the total carbon footprint in their supply chains and some of the strategies they can use to mitigate carbon emissions. Using the price of call options, chapter 13 illustrates how managers can quantify the savings attributed to sustainability-related investment. Chapter 14 develops a non-linear optimization model that addresses the complex trade-offs involved in making joint operational and environmental decisions. Finally, chapter 15 develops a Data Envelopment Analysis-based method for supplier evaluation incorporating environmental and business factors.

Conversations With Form N. John Habraken, Andrés Mignucci, Jonathan Teicher. 2014-06-20 Through a progressive series of exercises - accompanied by observational studies, examples and applied theory - *Conversations with Form: A Workbook for Students of Architecture* improves designers' understanding, dexterity and resilience in making form. It specifically focuses on the skills needed to succeed in the everyday context in which the vast majority of architects will ultimately design and build, wherein no one designs in isolation and existing conditions never represent a tabula rasa. The text begins by familiarizing readers with utilizing step-by-step sequences of moves to steer the development of built form and rapidly moves to designs of increasing complexity. These design plays treat a wide-ranging series of topics including structures, patterns, types, systems and other kinds of shared form principles. *Conversations with Form* is a workbook for honing hands-on skills and tools of the architect's trade. Beautifully illustrated and focused on practical, usable information, the book provides architectural students with an accessible and useable handbook for their design practice.

Strategic Management of Marine Ecosystems Eugene Levner, Igor Linkov, Jean-Marie Proth. 2006-03-30 The demand for advanced management methods and tools for marine ecosystems is increasing worldwide. Today, many marine ecosystems are significantly affected by disastrous pollution from industrial, agricultural, municipal, transportational, and other anthropogenic sources. The issues of environmental integrity are especially acute in the Mediterranean and Red Sea basins, the cradle of modern civilization. The drying of the Dead Sea is one of the most vivid examples of environmental disintegration with severe negative consequences on the ecology, industry, and wildlife in the area. Strategic management and coordination of international remedial and restoration efforts is required to improve environmental conditions of marine ecosystems in the Middle East as well as in other areas. The NATO Advanced Study Institute (ASI) held in Nice in October 2003 was designed to: (1) provide a discussion forum for the latest developments in the field of environmentally-conscious strategic management of marine environments, and (2) integrate expertise of ecologists, biologists, economists, and managers from European, American, Canadian, Russian, and Israeli organizations in developing a framework for strategic management of marine ecosystems. The ASI addressed the following issues: Key environmental management problems in exploited marine ecosystems; Measuring and monitoring of municipal, industrial, and agricultural effluents; Global contamination of seawaters and required remedial efforts; Supply Chain Management approach for strategic coastal zones management and planning; Development of environmentally friendly technologies for coastal zone development; Modeling for sustainable aquaculture; and Social, political, and economic challenges in marine ecosystem management.

Eco-chic Sandy Black. 2008 In a comprehensive survey of this highly pertinent subject, leading academic Sandy Black examines the way the fashion industry is changing to accommodate the environmental concerns of the twenty first century. She exposes the naked truth behind the clothes we wear, exploring alternate practices and assessing their feasibility. Using case studies of designers from the catwalks and the high street, including Katharine Hamnett, Marks and Spencer and Linda Loudermilk, the book illustrates how these processes are finding their way into the industry, and shows how ethical fashion has moved on from its traditional connotations of hemp shirts and rope sandals. Fashion and environmental awareness are two concerns that do not

comfortably sit side by side. Over the past ten years, high street fashion, led by global chains, has become ever more affordable and disposable. The sourcing of materials, the manufacture and the distribution of clothes have become the dirty secrets of the beautiful industry. Eco-Chic continues Black Dog's commitment to the environment and to responsible design. Lavishly illustrated, it is a timely publication that will appeal equally to the fashion conscious and environmentally aware.

Pandora's Poison Joe Thornton.2000 The dangers of organochlorides and a proposed solution.

Globalizing Race Dorian Bell.2018-04-15 Globalizing Race explores how intersections between French antisemitism and imperialism shaped the development of European racial thought. Ranging from the African misadventures of the antisemitic Marquis de Morès to the Parisian novels and newspapers of late nineteenth-century professional antisemites, Dorian Bell argues that France's colonial expansion helped antisemitism take its modern, racializing form—and that, conversely, antisemitism influenced the elaboration of the imperial project itself. Globalizing Race radiates from France to place authors like Guy de Maupassant and Émile Zola into sustained relation with thinkers from across the ideological spectrum, including Hannah Arendt, Friedrich Nietzsche, Frantz Fanon, Karl Marx, Max Horkheimer, and Theodor Adorno. Engaging with what has been called the “spatial turn” in social theory, the book offers new tools for thinking about how racisms interact across space and time. Among these is what Bell calls racial scalarity. Race, Bell argues, did not just become globalized when European racism and antisemitism accompanied imperial penetration into the farthest reaches of the world. Rather, race became most thoroughly global as a method for constructing and negotiating the different scales (national, global, etc.) necessary for the development of imperial capitalism. As France, Europe, and the world confront a rising tide of Islamophobia, Globalizing Race also brings into fascinating focus how present-day French responses to Muslim antisemitism hark back to older, problematic modes of representing the European colonial periphery.

The Ecology of Freedom Murray Bookchin.1991 The Ecology of Freedom, his most exciting and far-reaching work yet. This engaging and extremely readable book's scope is downright breathtaking. Using an inspired synthesis of ecology, anthropology, philosophy and political theory, it traces our society's conflicting legacies of freedom and domination, from the first emergence of human culture to today's global capitalism. The theme of Bookchin's grand historical narrative is straightforward: environmental, economic and political devastation are born at the moment that human societies begin to organize themselves hierarchically. And, despite the nuance and detail of his arguments, the lesson to be learned is just as basic: our nightmare will continue until hierarchy is dissolved and human beings develop more sane, sustainable and egalitarian social structures. The Ecology of

Freedom is indispensable reading for anyone who's tired of living in a world where everything, and everyone, is an exploitable resource. It includes a brand new preface by the author. Book jacket.

Landscape as Infrastructure Pierre Belanger.2016-11-10 As ecology becomes the new engineering, the projection of landscape as infrastructure—the contemporary alignment of the disciplines of landscape architecture, civil engineering, and urban planning— has become pressing. Predominant challenges facing urban regions and territories today—including shifting climates, material flows, and population mobilities, are addressed and strategized here. Responding to the under-performance of master planning and over-exertion of technological systems at the end of twentieth century, this book argues for the strategic design of infrastructural ecologies, describing a synthetic landscape of living, biophysical systems that operate as urban infrastructures to shape and direct the future of urban economies and cultures into the 21st century. Pierre Bélanger is Associate Professor of Landscape Architecture and Co-Director of the Master in Design Studies Program at Harvard University's Graduate School of Design. As part of the Department of Landscape Architecture and the Advanced Studies Program, Bélanger teaches and coordinates graduate courses on the convergence of ecology, infrastructure and urbanism in the interrelated fields of design, planning and engineering. Dr. Bélanger is author of the 35th edition of the Pamphlet Architecture Series from Princeton Architectural Press, GOING LIVE: from States to Systems (pa35.net), co-editor with Jennifer Sigler of the 39th issue of Harvard Design Magazine, Wet Matter, and co-author of the forthcoming volume ECOLOGIES OF POWER: Mapping Military Geographies & Logistical Landscapes of the U.S. Department of Defense. As a landscape architect and urbanist, he is the recipient of the 2008 Canada Prix de Rome in Architecture and the Curator for the Canada Pavilion and Canadian Exhibition, EXTRACTION, at the 2016 Venice Architecture Biennale (extraction.ca).

Ecstatic Encounters Mattijs van de Port.2011 Reality does not comply with our narrations of it. And that is most certainly the case with the narrations produced in academia. An anthropologist in Bahia, Brazil, fears to become possessed by the spirits he had come to study; falls madly in love with an 'informant'; finds himself baffled by the sayings of a clairvoyant; and has to come to grips with the murder of one of his best friends. Unsettling events that do not belong to the orderly world of scientific research, yet leave their imprint on the way the anthropologist comes to understand the world. Reflecting on his long research experience with the spirit possession cult Candomblê, the author shows, in a probing manner, how definitions of reality always require the exclusion of certain perceptions, experiences and insights. And yet, this 'rest-of-what-is' turns out to be an inexhaustible

source of amazement, seduction and renewal. --P [4] of cover.

The May 1968 Events in France Keith A. Reader, Khursheed Wadia. 2016-07-27 The multiple impact of the May 1968 events in France is here reviewed and analysed, initially through a narrative account of the events themselves and then through a systematic survey of the various manners in which they have been interpreted and reproduced in France. This covers successively political, social/sociological, and cultural texts - first-hand accounts along with works by political activists and academic social scientists - before moving to a consideration of fictional works (novels and feature films) dealing with or set during the events.

A Thesaurus of English Word Roots Horace Gerald Danner. 2014-03-27 Horace G. Danner's *A Thesaurus of English Word Roots* is a compendium of the most-used word roots of the English language. As Timothy B. Noone notes in his foreword: "Dr. Danner's book allows you not only to build up your passive English vocabulary, resulting in word recognition knowledge, but also gives you the rudiments for developing your active English vocabulary, making it possible to infer the meaning of words with which you are not yet acquainted. Your knowledge can now expand and will do so exponentially as your awareness of the roots in English words and your corresponding ability to decode unfamiliar words grows apace. This is the beginning of a fine mental linguistic library: so enjoy!" In *A Thesaurus of English Word Roots*, all word roots are listed alphabetically, along with the Greek or Latin words from which they derive, together with the roots' original meanings. If the current meaning of an individual root differs from the original meaning, that is listed in a separate column. In the examples column, the words which contain the root are then listed, starting with their prefixes, for example, dysacusia, hyperacusia. These root-starting terms then are followed by terms where the root falls behind the word, e.g., acouesthesia and acoumeter. These words are followed by words where the root falls in the middle or the end, as in such terms as bradyacusia and odynacosis.. In this manner, *A Thesaurus of English Word Roots* places the word in as many word families as there are elements in the word. This work will interest linguists and philologists and anyone interested in the etymological aspects of English language.

Bioeconomy Iris Lewandowski. 2017-12-11 This book is open access under a CC BY 4.0 license. This book defines the new field of Bioeconomy as the sustainable and innovative use of biomass and biological knowledge to provide food, feed, industrial products, bioenergy and ecological services. The chapters highlight the importance of bioeconomy-related concepts in public, scientific, and political discourse. Using an interdisciplinary approach, the authors outline the dimensions of the bioeconomy as a means of achieving sustainability. The authors are ideally situated to elaborate on the diverse aspects of the bioeconomy. They have acquired in-depth experience of interdisciplinary research through the university's focus on "Bioeconomy", its contribution to the Bioeconomy Research Program of the federal state of Baden-Württemberg, and its participation in the German Bioeconomy Council. With the number of bioeconomy-related projects at European universities rising, this book will provide graduate students and researchers with background information on the bioeconomy. It will familiarize scientific readers with bioeconomy-related terms and give scientific background for economists, agronomists and natural scientists alike.

Holistic Sustainability Through Craft-Design Collaboration Rebecca Reubens. 2019-05-07 This book explores the intersection of craft, design and sustainability in the developing world. It argues that most sustainable design approaches and efforts fall short of implementing holistic sustainability, and in order to reach this goal, design must be underpinned by alternatives to the mainstream, technology-intensive, industrial design paradigm. Renewable materials such as bamboo, cork and hemp - which are abundantly available in the developing world - have the potential to be a viable resource base for sustainable development. Current sustainable design initiatives and approaches already recontextualize these materials using industrial techniques and technologies. However, these efforts fall short of impacting holistic sustainability and tend to focus on the ecological aspect.

This book offers the development of one alternative to design for holistic sustainability, called the Rhizome Approach, which draws on existing sustainability praxis and craft. Holistic Sustainability Through Craft-Design Collaboration includes customizable tools which aim to empower designers to guide and evaluate their own designs. Through these tools, and the Rhizome Approach in general, the book aims to enable designers, and students of design, to move beyond green and sustainable design, to holistic sustainability design.
