Simply Local Flaps Michael F. Klaassen, Earle Brown, Felix Behan.2018-12-23 This book provides a useful framework for categorizing local flaps on the basis of their composition, blood supply,

geometry and means of transfer. The initial chapters are dedicated to the fundamentals – the basic procedures, how to get started, and technical tips – as well as advice on wound care and scar management. These practical pointers are essential for students of plastic surgery, while also offering helpful refreshers for experienced practitioners. The subsequent chapters describe the types of flaps that are traditionally taught and the 10 most common flaps. There is also a practical guide to W-plasty, Z-plasty and their various modifications, which can be applied to both scar revision and the closure of the donor sites. The book also discusses the Keystone Perforator Island Flap (KPIF) and its application to various body sites, offering elegant solutions to some very tricky situations. In turn, the book's final chapters are focused on assessment, decision-making and lessons learned – essentially, how to decide if a skin graft is the better choice, matters relating to aesthetics, and dealing with complications. Rather than demonstrate exactly how to execute flaps, the book's primary goal is to inspire students and trainees to think about the reconstructive problem, consider all patient-related and anatomical factors, and accurately recognize what can feasibly be achieved.

Manual of Head and Neck Reconstruction Using Regional and Free Flaps Boban M

Erovic, Piero Lercher. 2014-12-10 Ablative tumor surgery of the head and neck region often results in severe cosmetic and functional deformities. In these cases, microvascular free-tissue transfer enables three-dimensional reconstruction of head and neck defects. The selection of adequate donor tissue and a profound knowledge of the human anatomy and the various harvesting techniques are paramount in ensuring successful reconstruction. Reflecting current surgical approaches, this book presents the most frequently used flaps in head and neck surgery, including detailed overviews as well as their respective pearls and pitfalls. Moreover, each section contains a synopsis and pre-operative checklist. The overlay-technique merges high-quality-photographs with drawings and precisely illustrates the step-to-step descriptions of the different flap harvesting techniques, making this manual in pocket size an unique and accessible reference for both doctors in training and specialists in the field of otolaryngology, head and neck, plastic, maxillofacial and skull base surgery.

Oral Board Review for Oral and Maxillofacial Surgery Robert Reti, Damian Findlay. 2020-12-05 The oral board exam for the American Board of Oral and Maxillofacial Surgery (ABOMS) can be intimidating to many surgeons due to the broad range of information one must know for the exam. However, while the examination guidelines provide a general outline of topics that may be covered, there is no true direction on how to prepare for it. Traditionally, candidates do so by using what are considered “underground” databanks, previous test questions, and power point presentations that run the gamut of commonly covered material. Until now, there have been no current comprehensive oral board review books available for the Oral and Maxillofacial Surgery boards. Oral Board Review

for Oral and Maxillofacial Surgery fills that gap as the go-to resource for those attempting to successfully challenge the oral boards and for residents to polish up on their training. Edited and authored by top physicians in the field, this book is concise and easy to read, yet thorough with high yield information. An outline of the pertinent material is reviewed, and a patient work up is presented. Important questions to ask, signs to look for, and labs/images to order are included. It also includes tables and keywords that are typically mentioned on the exam and also offers explanations to some key points. Next are cases, which are presented in a question and answer format. As the case progresses, more complicated scenarios requiring management are presented. Lastly, complications are covered, which is the final section of each board scenario. Included are basic topics the surgeon needs to know, followed by topics that are nice to know, and numerous highly debated/complex questions that are discussed among candidates preparing for the exam. It should be noted that the authors are not privy to any inside information about the exam. What is presented is material candidates that have successfully passed the exam feel is important to know. This book is not endorsed by American Association of Oral and Maxillofacial Surgeons or the American Board of Oral and Maxillofacial Surgery.

Local Flap Reconstruction Anthony Penington. 2010-06-29 400 color photos and a case study approach provide procedural skills for all aspects of flap surgery Endorsed by the Skin and Cancer Foundation of Victoria! Praise for the first edition: This book uses a case study approach that is comprehensive and easy to follow with lots of colour photographs. I enjoyed reading this book: it's logical, easy on the eye and mind and it's easy to tell the author is a very experienced facial surgeon. I think it is an extremely valuable book to have and to use regularly as it will help in managing a wide variety of patients.--High Commendation in the Surgery Category of the 2008 British Medical Association Medical Book Awards This new edition presents 78 photographic case studies that illustrate the techniques of local flap repair for the reconstruction of skin defects. From basic explanation of the principles of reconstructive surgery to some of the more advanced and cutting-edge procedural skills, like island flaps, the book covers all aspects of flap surgery in a concise and visual manner. More than 400 color illustrations take the reader through individual case studies in the pre, intra, and post operative stages of flap reconstructive surgery. This includes valuable 3 month followups that highlight realistic patient outcomes. Features: Maintains engaging writing style of the first edition Unlike competing titles, covers all regional anatomical parts for flap reconstruction, not just head and neck Flexible structure starts with simpler flaps and progresses to more advanced techniques for ease of use with practitioners with different levels of expertise

Jackson's Local Flaps in Head and Neck Reconstruction Peter C. Neligan, J. Brian Boyd, David Mathes. 2022-11-30 The essential, step-by-step surgical guide on reconstructive flaps for head and facial defects. Often referred to as the mirror of the soul, the face is indelibly entwined with a person's appearance and personality. This presents a particular challenge when reconstructive surgery is required. The goal of every reconstructive surgeon is to repair damage as inconspicuously as possible with minimal scarring while restoring prior function. Jackson's Local Flaps in Head and Neck Reconstruction, Third Edition by renowned plastic surgeons Peter C. Neligan, J. Brian Boyd, and David Mathes honors the two widely acclaimed prior editions of this landmark resource by the late master plastic surgeon, educator, and prolific author Ian T. Jackson. The new edition features updated and streamlined content, simplified references, colorized illustrations, and procedural videos. The book includes nine chapters, starting with two foundational chapters that discuss the advantages of local flaps, skin biomechanics, surgical planning, principles of skin and soft tissue movement, the utility of Burow's triangles, and use of diverse flaps, followed by patient management. Each of the procedural chapters focuses on a specific area, with step-by-step reconstruction techniques for the scalp, forehead, eyelids, nasal area, cheeks, ears, and lips. The reader-friendly book provides plastic surgeons of all levels with a simple yet elegant approach to managing reconstructive problems commonly encountered in practice. Key Highlights Firsthand pearls on recently introduced flaps including perforator and propeller. Each procedural chapter includes discussion of impacted anatomy and aesthetics, imaging, different types of flaps, challenges, surgical pearls, and summary tables for quick review. Abundant illustrations and operative photos depict step-by-step solutions for reconstructive challenges of the head and neck. Twenty-two high-quality surgical videos provide visual insights on how to treat specific defects using

a diverse spectrum of flap techniques All aesthetic and reconstructive surgeons will benefit from consulting this invaluable, reader-friendly resource for daily practice based on the beloved classic. Local Flaps in Facial Reconstruction Velupillai Ilankovan, Madan Ethunandan, Tian Ee Seah. 2015-02-27 Written by three experienced consultants with a large skin cancer practice and international reputations for excellence, this book provides comprehensive practical solutions to defects in the head and neck region that are confronted by the clinician in day-to-day practice. Essential information is first provided on anesthesia, defect assessment and individual flaps, while the core chapters focus on the reconstruction of specific defects at specific sites. The defects and reconstructive solutions are depicted by means of sequential, clinically relevant line drawings that are complemented by clear supporting text highlighting the intricacies and nuances of the procedure and the decision-making process. Helpful algorithms at the end of each chapter summarize the solutions. This book will be ideal for use in daily practice by clinicians and trainees and will assist in achieving excellent cosmetic outcomes in this aesthetically sensitive part of the body.
