*1000 Multiple Response Questions in Paediatric Dentistry* Morenike Folayan.2016 This book contains one thousand fixed response questions. It is designed for students of paediatric dentistry who want to prepare for a certifying test or similar examination. Most of those tests use fixed response questions. This book can help students overcome some of the common problems candidates have with MRQ tests. Even as a well-prepared and successful medical student, you likely will not be able to show how good you are in your first, or even second try at a comprehensive fixed response test. There is a good reason for this. Fixed response questions are a blunt instrument. They deny collaboration, reward speed and punish nuance. Unlike what one has become accustomed to in medical school: mentorship, caution against haste, and reward for insight. Without a lot of experience in fixed response tests, you are like a seasoned footballer who is about to be dropped into a rugby scrum. This book will help you get through it. It can be used for quick revision of various topics namely caries epidemiology, prevention and management; pulp therapy; tooth restoration; dental materials; oral medicine; traumatic dental injury; pain and behaviour management; tooth anatomy and physiology; eruption and eruption disorders; and general dentistry for children. There are three basic kinds of fixed-response questions in the book: True/False Questions, Multiple Choice Questions and Multiple Response Questions. The introduction section of the book provides readers with 10 quick guides on how to make yourself familiar with the vast material in the book. At the end of the book are the answers to the questions as well as a blank answer sheet which you could use during your personal studies. The book shall be revised every three years to ensure it addresses contemporary issues in paediatric dentistry as well as ensure it contains information on current concepts in paediatric dentistry.

*Scenario Based MCQ in Dentistry* Mohammad Khursheed Alam, Kiran Kumar Ganji, Bader K. Alzarea, Santosh Patil, Mohammad Sghaireen. 2020-03-10 Dentistry has constantly evolved over the years to keep abreast of the latest trends, techniques, and diagnostic procedures. Dental Schools have undergone a number of changes in an effort to arrive upon the ideal format for testing clinical knowledge in examinations. Multiple-choice questions (MCQs) have been the most common modality by which dental students were examined. Although MCQs enable the testing of a broad range of topics, as well as being cost effective, they have largely been abandoned in favour of scenario-based questions (SBQs). Traditional MCQs often abstract and measure only whether people recall facts in their short-term memory. Converting these questions to scenario-based questions can increase the level of difficulty, measure higher level thought and providing relevant context. The authors of *Scenario Based MCQ in Dentistry* have endeavoured to keep these facts in mind and provide a significant number of high-quality SBQs that comprehensively examine the dental curriculum. Most of the questions are scenario based. Each question not only provides an opportunity to apply clinical knowledge and correctly identify the single best answer to a question, but also to learn why the other answers are wrong, greatly increasing the clinical acumen and learning opportunity of the reader. Selection tests and competitive exams are hurdles that a candidate seeks to clear with ease. It all depends on meticulous preparation and the quality of resource materials available to the student. Considering the quantity of subject matter that needs to be covered, it becomes a herculean task unless the candidate chooses the right training tool. Reference texts are often too advanced and undergraduate texts are insufficiently updated or lacking in depth and detail. In this context, a lack of good revision aids can be frustrating. This book has been compiled with the selection tests in mind as a tool for rapid revision and analytical learning. It is useful for doctors, dental students, graduates, dental nurses, technicians, as well as specialists seeking professional excellence, or for those studying for the various licensing exams conducted by SCFHS, Saudi Board, HAAD, OMSB, SCHQ, DHCC, DHA, and MOH. This book aims to provide dental students with a useful source for exam preparation, as well as for supplementing the readers' knowledge so that they feel fully prepared for the various postgraduate entrance examinations--
