A Framework for K-12 Science Education National Research Council,Division of Behavioral and Social Sciences and Education,Board on Science

Education,Committee on a Conceptual Framework for New K-12 Science Education Standards.2012-02-28 Science, engineering, and technology

permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical

issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12

science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12

Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the

development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional

development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering

education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common

application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences,

and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates

to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific

and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.
