Carriage of Goods by Sea John F. Wilson.2004 Carriage of Goods by Sea is the definitive textbook on this important area of international trade law and is suitable for both undergraduate and postgraduate students. Written by an expert in the field, it provides an authoritative, in-depth and critical survey of all aspects of the law relating to carriage of goods by sea. The book successfully combines a clear analysis of legal principles with sound practical considerations, allowing for a more complete treatment of the subject.--BOOK JACKET.

Global Supply Chain Management and International Logistics Alan E. Branch.2008-12-19 The development of international trade is driven by international logistics and management and the provision of the global supply chain. The ultimate objective of global supply chain management is to link the market place, distribution network, manufacturing/processing/assembly process, and procurement activity in such a way that customers are serviced at a higher level yet lower cost. Overall this has introduced a new breed of management in a computer literate environment operating in a global infrastructure. Addressing this complex topic, Alan Branch's new book fulfills two clear objectives: to provide a concise, standard work on the subject, written in lucid language that embraces all the ingredients of a notoriously complex subject with a strategic focus to extol best practices and focus on all areas of the industrial and consumer sectors and their interface with changing international market needs. Until now, no book dedicated to international logistics and supply chain management was available. Practically-oriented, this book features numerous case studies and diagrams from logistic operators. An ideal resource for management students, academics and managers who need a succinct treatment of global operations, Branch's book skillfully illustrates his ideas in practice. It is a book which should be on the shelf of every practitioner and student of the subject. Also available from Routledge: *Elements of Shipping*, Eighth Edition, Alan E. Branch. Agricultural Value Chains in India Ashok Gulati,Kavery Ganguly,Harsh Wardhan.2022-01-01 This open access book provides a clear holistic conceptual framework of CISS-F (competitiveness, inclusiveness, sustainability, scalability and access to finance) to analyse the efficiency of value chains of high value agricultural commodities in India. It is based on the understanding that agriculture is an integrated system that connects farming with logistics, processing and marketing. Farmer's welfare being central to any agricultural policy makes it very pertinent to study how a value chain works and can be strengthened further to realize this policy goal. This book adds value to the existing research by studying the value chains end-to-end across a wide spectrum of agricultural commodities with the holistic lens of CISS-F. It is not enough that a value chain is competitive but not inclusive or it is competitive and inclusive but not sustainable. The issue of scalability is very critical to achieve macro gains in terms of greater farmer outreach and sectoral growth. The research undertaken here brings out some very useful insights for policymaking in terms of what needs to be done better to steer the agricultural value chains towards being more competitive, inclusive, sustainable and scalable. The value chain specific research findings help draw very nuanced policy recommendations as well as present a big picture of the future direction of policy making in agriculture.

Computational Fluid Dynamics in Food Processing Da-Wen Sun.2018-10-26 Since many processes in the food industry involve fluid flow and heat and mass transfer, Computational Fluid Dynamics (CFD) provides a powerful early-stage simulation tool for gaining a qualitative and

quantitative assessment of the performance of food processing, allowing engineers to test concepts all the way through the development of a process or system. Published in 2007, the first edition was the first book to address the use of CFD in food processing applications, and its aims were to present a comprehensive review of CFD applications for the food industry and pinpoint the research and development trends in the development of the technology; to provide the engineer and technologist working in research, development, and operations in the food industry with critical, comprehensive, and readily accessible information on the art and science of CFD; and to serve as an essential reference source to undergraduate and postgraduate students and researchers in universities and research institutions. This will continue to be the purpose of this second edition. In the second edition, in order to reflect the most recent research and development trends in the technology, only a few original chapters are updated with the latest developments. Therefore, this new edition mostly contains new chapters covering the analysis and optimization of cold chain facilities, simulation of thermal processing and modeling of heat exchangers, and CFD applications in other food processes.

Multimodal Transport Law Marian Hoeks.2010-01-01 We only have to look around us on the road while we travel to work or home, or to use our eyes at a railway station to know that the transport of goods takes up a lot of the room our modern day infrastructures provide. Sometimes perhaps a little too much; nowadays congestion seems to be the rule rather than the exception. This is an uncomfortable side effect of the explosive growth freight transport has experienced the last few decades¹. Modern day transport offers a considerable array of possibilities; possibilities that are for the most part taken for granted by the general public that enjoys their benefits. The average European would not be surprised to learn that the fruit on offer in the local supermarket originates from another continent for instance. The idea that most of the things we use in our daily routine stem from a distant source, such as a cell phone from Japan, a trendy pair of designer jeans made in China or a glass of Australian wine, seems completely natural to us. Clearly the contemporary transport industry offers us a lot of benefits besides such discomforts as congestion and pollution. In earlier times, before machinery such as the steam engine had been invented it was hardly cost effective or even feasible when it came to perishables to carry goods halfway around the world if they were not at least valuable and extraordinary². The limitations set on trade by the transport structures available did more however than simply curtail the range of affordable products on offer for the public. They also had a negative effect on the location of the industry, limited transport possibilities and forced production to take place near or in heavily populated areas to secure the necessary workforce and market possibilities. After all, industrial decentralisation is only feasible if there is an infrastructure capable of supporting a cost effective movement of goods and employees³ ...

Refrigeration, Air Conditioning and Heat Pumps Fabio Polonara.2021-02-11 Refrigeration, air conditioning, and heat pumps (RACHP) have an

important impact on the final energy uses of many sectors of modern society, such as residential, commercial, industrial, transport, and automotive. Moreover, RACHP also have an important environmental impact due to the working fluids that deplete the stratospheric ozone layer, which are being phased out according to the Montreal Protocol (1989). Last, but not least, high global warming potential (GWP), working fluids (directly), and energy consumption (indirectly) are responsible for a non-negligible quota of greenhouse gas (GHG) emissions in the atmosphere, thus impacting climate change.

Food Fraud John M. Ryan.2015-10-19 Food Fraud provides an overview of the current state on the topic to help readers understand which products are being impacted, how pervasive food fraud is, and what laws are in effect across the developed world. As international food trade increases, food processors, distributors, and consumers are purchasing more and more food from foreign countries that, in many cases, have inadequate oversight or control over what is coming into our supermarkets, restaurants, and refrigerators. This book is an essential quick reference that will familiarize readers with the latest issues surrounding the food industry. Includes new FDA rules based on the Food Safety Modernization Act (FSMA) regarding “intentional adulteration and “economically motivated adulteration Presents a review of the latest food detection testing technologies Provides examples of import controls over illegal replacements

HACCP in Meat, Poultry, and Fish Processing A. M. Pearson, T. R. Dutson. 2012-12-06 The HACCP (hazard analysis critical control point) concept for food products was an outgrowth of the US space program with the demand for a safe food supply for manned space flights by the National Aeronautics and Space Administration (NASA). The original work was carried out by the Pillsbury Company under the direction of Roward E. Bauman, who as the author of chapter 1 describes the evolution of the HACCP system and its adaptation to foods. The second chapter discusses the adoption of HACCP principles and explains how they fit into the USDA and FDA meat, poultry and seafood inspection systems. The next chapter discusses how HACCP principles can be extended to production of meat, poultry and seafoods, a most important area involved in producing a safe food supply. Chapter 4 deals with the use of HACCP in controlling hazards encountered in slaughtering and distribution of fresh meat and poultry, while chapter 5 discusses the problem - both spoilage and hazards - involved in processing and distribution of meat, poultry and seafood products. Chapter 6 covers the entire area of fish and seafoods, including both fresh and processed products from the standpoints of spoilage and hazards.

Installation and Operation of a Modular Bivalve Hatchery Samia Sarkis. 2007 This publication contains guidance on establishing a bivalve hatchery, covering both the technicalities of setting up and operating a hatchery, as well as some basic scientific background issues. Information is given for each stage of rearing: broodstock conditioning, algal culture, hatchery, nursery and growout of juveniles; including the physical requirements and culture considerations and procedures for each rearing stage. The final chapter on economic considerations provides an insight into the labour involved for each stage of production, along with a list of equipment and supplies, which may be used as a template for a new installation. It includes a CD-ROM with the complete text of the complete publication.
