Command Of The Air General Giulio Douhet.2014-08-15 In the pantheon of air power spokesmen, Giulio Douhet holds center stage. His writings, more often cited than perhaps actually read, appear as excerpts and aphorisms in the writings of numerous other air power spokesmen, advocates-and critics. Though a highly controversial figure, the very controversy that surrounds him offers to us a testimonial of the value and depth of his work, and the need for airmen today to become familiar with his thought. The progressive development of air power to the point where, today, it is more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest In fact, in many ways, the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision. Douhet, together with Hugh “Boom” Trenchard of Great Britain and William “Billy” Mitchell of the United States, is justly recognized as one of the three great spokesmen of the early air power era. This reprint is offered in the spirit of continuing the dialogue that Douhet himself so perceptively began with the first edition of this book, published in 1921. Readers may well find

much that they disagree with in this book, but also much that is of enduring value. The vital necessity of Douhet's central vision—that command of the air is all important in modern warfare—has been proven throughout the history of wars in this century, from the fighting over the Somme to the air war over Kuwait and Iraq.

Mankind Beyond Earth Claude A. Piantadosi. 2013-01-01 Seeking to reenergize Americans' passion for the space program, the value of further exploration of the Moon, and the importance of human beings on the final frontier, Claude A. Piantadosi presents a rich history of American space exploration and its major achievements. He emphasizes the importance of reclaiming national command of our manned program and continuing our unmanned space missions, and he stresses the many adventures that still await us in the unfolding universe. Acknowledging space exploration's practical and financial obstacles, Piantadosi challenges us to revitalize American leadership in space exploration in order to reap its scientific bounty. Piantadosi explains why space exploration, a captivating story of ambition, invention, and discovery, is also increasingly difficult and why space experts always seem to disagree. He argues that the future of the space program requires merging the practicalities of exploration with the constraints of human biology. Space science deals with the unknown, and the margin (and budget) for error is small. Lethal near-vacuum conditions, deadly cosmic radiation, microgravity, vast distances, and highly scattered resources remain immense physical problems. To forge ahead, America needs to develop affordable space transportation and flexible exploration strategies based in sound science. Piantadosi closes with suggestions for accomplishing these goals, combining his healthy skepticism as a scientist with an unshakable belief in space's untapped—and wholly worthwhile—potential.

treatment of astrology. It is a study in the use of Horoscope in every man's daily life. The work in two volumes is divided into twelve houses, containing six each in successive order. The twelve houses have reference to the material relation of soul (jeeva) in its journey from the cradle to the grave. The study of illustrations (charts) makes every point - even the omitted rudimentary principles and rules - very clear and graspable. Volume I deals with houses I to VI. First House deals with the beginning of life, childhood, health, physical body and character. Second House represents family, face, right eye, food, manners and source of death. Third House rules brothers and sisters, intelligence and other immediate relations. Fourth House indicates peace of mind, home life, land and ancestral properties, education, neck and shoulders. Fifth House indicates children, intelligence, emotion and fame, Sixth House rules over debts, enemies, miseries, sorrows, illness and disappointments. Volume II deals with houses VII to XII. The Seventh House represents wife, husband, marriage, sexual diseases, business partner, diplomacy, talent and general happiness. The Eight House indicates longevity, legacies, disgrace, degradation and details pertaining to death. The Ninth rules father, righteousness, religion, fame leadership, journeys and communications with spirits. The Tenth indicates occupations, profession, honors, foreign travels and means of livelihood. The Eleventh represents means of gains, elder brother and freedom from misery. The Twelfth rules losses, carefully, sympathy, divine knowledge, Strengthening Forensic Science in the United States National Research Council, Division on Engineering and Physical Sciences, Committee on Applied and Theoretical Statistics, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on Identifying the Needs of the Forensic Sciences Community. 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of

adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application.

Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration.

Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

outstanding chess books earn him a high rank among the world's top chess authors. In this well-annotated text, Mr. Chernev guides his readers to an understanding of the subtleties of combinative play. Step-by-step from the simplest combinations to the most complex, the book explains the intricacies of pins and counter-pins, Knight forks, smothered mates, and other elements of combination play. There is a discussion in chapter five of combinations lurking in roads not taken — alternate lines of play show up in Chernev's notes to the game, while the sixth chapter, Convincing the Kibitzers, shows the second-guessers what would have happened had the masters done the obvious. (Some disastrous combinations show up here.) A host of boomerangs follow — cases where the player didn't look far enough ahead and his combination, instead of bringing about the opponent's ruin, paved the way to his defeat. Chapters eight through twenty one take up combinations used by such great players as Tarrasch, Botvinnik, Nimzovich, Steinitz, Rubinstein, and Pillsbury; the sacrificial combinations of Anderssen and Spielmann; the dazzling brilliancies of Morphy, Keres, and Alekhine; the deadly attacks of Marshall; the almost unfathomable ideas of Lasker; and the matchless creations of Capablanca. Mr. Chernev's thoughtful annotations unravel the secrets of each of these plans. A diagram accompanies each combination; an index, by player, leads the reader to the combination he is looking for.

the last two decades. A work of predictive astrology, it amalgamates a plethora of principles enshrined in various classical texts and practical study of birth charts of those who have been unfortunate enough to suffer the immeasurable grief and plight of untimely widowhood. Untimely widowhood is the biggest tragedy that can befall a woman and is irreversible. In olden days, widowhood in general and untimely widowhood in particular was considered an unpardonable sin and a woman had to commit Sati, that is to mount the pyre of her late husband. Was not this inhuman? Women would be ever grateful to Raja Ram Mohan Rai whose untiring efforts led to rooting out of this obnoxious practice. A common belief among masses, as also amongst self-styled astrologers, is that mangati females or those females having kuja dosa in their birth charts are predisposed to suffer widowhood. We would like to humbly opine that this belief is only partially correct. It is not certain that females having kuja dosa will essentially undergo the miseries of marital disaster such as widowhood. Many females, who suffered untimely widowhood, were not mangati either from ascendant, or from Moon or from Venus. This is definitely a wrong concept that widowhood will curse only a mangati female. In fact, much is not known about the kuja dosa and its actual effect.
