**Virtual Cities** Konstantinos Dimopoulos. 2020-11-12 Virtual cities are places of often-fractured geographies, impossible physics, outrageous assumptions and almost untamed imaginations given digital structure. This book, the first atlas of its kind, aims to explore, map, study and celebrate them. To imagine what they would be like in reality. To paint a lasting picture of their domes, arches and walls. From metropolitan sci-fi open worlds and medieval fantasy towns to contemporary cities and glimpses of gothic horror, author and urban planner Konstantinos Dimopoulos and visual artist Maria Kallikaki have brought to life over forty game cities. Together, they document the deep and exhilarating history of iconic gaming landscapes through richly illustrated commentary and analysis. Virtual Cities transports us into these imaginary worlds, through cities that span over four decades of digital history across literary and gaming genres. Travel to fantasy cities like World of Warcraft's Orgrimmar and Grim Fandango's Rubacava; envision what could be in the familiar cities of Assassin's Creed's London and Gabriel Knight's New Orleans; and steal a glimpse of cities of the future, in Final Fantasy VII's Midgar and Half-Life 2's City 17. Within, there are many more worlds to discover - each formed in the deepest corners of the imagination, their immense beauty and complexity astounding for artists, game designers, world builders and, above all, anyone who plays and cares about video games.

**Laser Radar** National Research Council, Division on Engineering and Physical Sciences, Committee on Review of Advancements in Active Electro-Optical Systems to Avoid Technological Surprise Adverse to U.S. National Security.2014-03-14 In today's world, the range of technologies with the potential to threaten the security of U.S. military forces is extremely broad. These include developments in explosive materials, sensors, control systems, robotics, satellite systems, and computing power, to name just a few. Such technologies have not only enhanced the capabilities of U.S. military forces, but also offer enhanced offensive capabilities to potential adversaries - either directly through the development of more sophisticated weapons, or more indirectly through opportunities for interrupting the function of defensive U.S. military systems. Passive and active electro-optical (EO) sensing technologies are prime examples. Laser Radar considers the potential of active EO technologies to create surprise; i.e., systems that use a source of visible or infrared light to interrogate a target in combination with sensitive detectors and processors to analyze the returned light. The addition of an interrogating light source to the system adds rich new phenomenologies that enable new capabilities to be explored. This report evaluates the fundamental, physical limits to active EO sensor technologies with potential military utility; identifies key technologies that may help overcome the impediments within a 5-10 year timeframe; considers the pros and cons of implementing each existing or emerging technology; and evaluates the potential uses of active EO sensing technologies, including 3D mapping and multi-discriminate laser radar technologies.
