Hypermobility, Fibromyalgia and Chronic Pain E-Book Alan J Hakim, Rosemary J. Keer, Rodney Grahame. 2010-09-15 This groundbreaking new text explains and documents the scientific basis of chronic pain in Joint Hypermobility Syndrome (JHS) and other heritable disorders of connective tissue from the physiological, epidemiological, genetic and clinical viewpoints. It asks the reader to consider the possibility of JHS, identify it clinically, understand its co-morbidities, including interdependencies with Fibromyalgia and Chronic Fatigue Syndrome, while managing the condition appropriately. *Hypermobility, Fibromyalgia and Chronic Pain* takes a multi-specialty and multidisciplinary approach to understanding JHS and its management, drawing together expertise from a broad group of internationally-recognized authors. The book is split into two sections. Section 1 deals with the clinical manifestations of JHS and Fibromyalgia, their epidemiology and pathophysiology. Section 2 covers clinical management. Here the reader will find chapters covering pharmacotherapeutics, psychotherapy and physical therapies that address the needs of patients from childhood to adulthood. It is hoped that *Hypermobility, Fibromyalgia and Chronic Pain* will advance knowledge of therapies and provoke further research while stimulating interest and encouraging debate. Comprehensively relates practical therapy to the nature of the underlying

pathology Covers in one single text both the scientific and practical management aspect of Joint Hypermobility Syndrome and its allied pathologies Contributions from over 30 leading international experts Multidisciplinary approach will support all health professionals working in this field

Assessment of Fuel Economy Technologies for Light-Duty Vehicles National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on the Assessment of Technologies for Improving Light-Duty Vehicle Fuel Economy. 2011-06-03 Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption-the amount of fuel consumed in a given

driving distance-because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.
