Math for Clinical Practice - E-Book Denise Macklin, Cynthia C.

Chernecky, Mother Helena Infortuna. 2014-04-14 Covering the ratio and proportion and formula methods, this comprehensive textbook presents a straightforward, real-world approach to the mathematical calculations used in the clinical setting. It features a unique, step-by-step process that teaches you to identify the information needed to perform a calculation, determine if information is missing, set up and perform the calculation, and check the answer to ensure accuracy. This systematic approach is designed to reduce human calculation errors and ensure patient safety. Common medications and methods of administration are used throughout the textbook, with more than 1,200 practice problems to help you master the math needed for clinical practice. All content, examples, problems, and scenarios are clinically based and completely up to date. More than 500 full-color illustrations show drug labels, parenteral and oral syringes, medicine cups, pumps, IV equipment, and more that are used in current clinical practice. Promotes learning with more than 1,200 practice problems and comprehensive math review

problems. Safety Alert, Clinical Alert, and Human Error Alert boxes are incorporated throughout to promote safe practice. Clinical Connections begin each chapter and explain how that topic relates to clinical practice. Examples for each new topic are presented in a unique, step-by-step format: the prescription, what you HAVE, what you KNOW, what you WANT, critical thinking, answer for best care, human error check boxes, and does your answer fit the general guideline? Practice problems follow each set of examples to reinforce your understanding. Follows current TJC and ISMP safety recommendations. Answer key is new to this edition and provides immediate feedback for practice problems. Features the latest drug information in practice problems and photographs. Drug Calculations Student Companion, Version 4 will be available on Evolve. It offers practice and application with an interactive tutorial on various topic areas within drug calculations and features over an additional 600 practice problems.

**Malingering, Feigning, and Response Bias in Psychiatric/
Psychological Injury** Gerald Young. 2014-02-11 This book is a
comprehensive analysis of the definitions, concepts, and recent
research on malingering, feigning, and other response biases in
psychological injury/ forensic disability populations. It presents a
new model of malingering and related biases, and develops a
“diagnostic” system based on it that is applicable to PTSD,
chronic pain, and TBI. Included are suggestions for effective
practice and future research based on the literature reviews and
the new systems, which are useful also because they can be used
readily by psychiatrists as much as psychologists. In *Malingering,
Feigning, and Response Style Assessment in
Psychiatric/Psychological Injury*, Dr. Young ambitiously sets out to
articulate and synthesize the polarities involved in the assessment
of response styles in psychological disabilities, including PTSD,
pain, and TBI. He does so thoroughly and very even-handedly,
neither minimizing the degree that outright faking can be found
in substantial numbers of examinees, nor disregarding the
possibility that there can be causes for validity test failure other

than malingerer. He reviews the prior systems for classifying evidence of malingerer, and proposes his own criteria for feigned PTSD. These are conservative and well-grounded in the prior literature. Finally, the book contains dozens of very recent references, giving testament to Dr. Young's immersion in the personal injury literature, as might be expected from his experience as founder and Editor in Chief for Psychological Injury and the Law. European Traditions in Didactics of Mathematics Werner Blum, Michèle Artigue, Maria Alessandra Mariotti, Rudolf Sträßer, Marja Van den Heuvel-Panhuizen.2019-02-18 This open access book discusses several didactic traditions in mathematics education in countries across Europe, including France, the Netherlands, Italy, Germany, the Czech and Slovakian Republics, and the Scandinavian states. It shows that while they all share common features both in the practice of learning and teaching at school and in research and development, they each have special features due to specific historical and cultural developments. The book also presents interesting historical facts about these didactic traditions, the theories and examples developed in these countries.

Proof and Other Dilemmas Bonnie Gold, Roger A. Simons.2008 For the majority of the twentieth century, philosophers of mathematics focused their attention on foundational questions. However, in the last quarter of the century they began to return to basics, and two new schools of thought were created: social constructivism and structuralism. The advent of the computer also led to proofs and development of mathematics assisted by computer, and to questions concerning the role of the computer in mathematics. This book of sixteen original essays is the first to explore this range of new developments in the philosophy of

mathematics, in a language accessible to mathematicians. Approximately half the essays were written by mathematicians, and consider questions that philosophers have not yet discussed. The other half, written by philosophers of mathematics, summarise the discussion in that community during the last 35 years. A connection is made in each case to issues relevant to the teaching of mathematics.
