Fiscal Multipliers: Size, Determinants, and Use in Macroeconomic Projections Nicoletta Batini, Luc Eyraud, Lorenzo Forni, Anke Weber. 2014-10-02
Fiscal multipliers are important tools for macroeconomic projections and policy design. In many countries, little is known about the size of multipliers, as data availability limits the scope for empirical research. This note provides general guidance on the definition, measurement, and use of fiscal multipliers. It reviews the literature related to their size, persistence and determinants. For countries where no reliable estimate is available, the note proposes a simple method to come up with reasonable values. Finally, the note presents options to incorporate multipliers in macroeconomic forecasts.

Cathedrals of Science Susan Sheets-Pyenson. 1988 By examining the development of museums in the hinterlands of Australasia, Canada, and South America, the author shows how colonial museum directors managed to assemble large and significant collections which included prime materials obtained from abroad.

Resilient Cities Peter Newman, Timothy Beatley, Heather Boyer. 2009-01-09 Half of the world's inhabitants now live in cities. In the next twenty years, the number of urban dwellers will swell to an estimated five billion people. With their inefficient transportation systems and poorly designed buildings, many cities—especially in the United States—consume enormous quantities of fossil fuels and emit high levels of greenhouse gases. But our planet is rapidly running out of the carbon-based fuels that have powered urban growth for centuries and we seem to be unable to curb our greenhouse gas emissions. Are the world's cities headed for inevitable collapse? The authors of this spirited book don't believe that oblivion is necessarily the destiny of urban areas. Instead, they believe that intelligent planning and visionary leadership can help cities meet the impending crises, and look to existing initiatives in cities around the world. Rather than responding with fear (as a legion of doomsaying prognosticators have done), they choose hope. First, they confront the problems, describing where we stand today in our use of oil and our contribution to climate change. They then present four possible outcomes for cities: "collapse," "ruralized," "divided," and "resilient." In response to their scenarios, they articulate how a new "sustainable urbanism" could replace today's "carbon-consuming urbanism." They address in detail how new transportation systems and buildings can be feasibly developed to replace our present low efficiency systems. In conclusion, they offer ten "strategic steps" that any city can take toward greater sustainability and resilience. This is not a book filled with "blue sky" theory (although blue skies will be a welcome result of its recommendations). Rather, it is packed with practical ideas, some of which are already working in cities today. It frankly admits that our cities have problems that will worsen if they are not addressed, but it suggests that these problems are solvable. And the time to begin solving them is now.

Eco-city Planning Tai-Chee Wong, Belinda Yuen. 2011-05-02 Eco-city planning is a key element of urban land use planning in perspective and of ongoing debate of environmental urban sustainable development with a spatial and practical dimension. The conceptual basis of ecological planning is that we can no longer afford to be merely human-centred in approach. Instead, the interdependency of human and non-human species has forced us to appreciate the 'rights' and 'intrinsic values' of non-human species in our pursuit for a sustainable ecosystem. This volume has as approach an emphasis on environmental planning policies whereby, for example, energy saving, anti-pollution measures, use of non-car modes, construction of green buildings, safeguarding of nature and natural habitats in urban areas, and use of more renewable resources are promotional norms. Their aims and leading outcome serve to protect the Earth from adverse effects of global warming and different sources of pollution threatening the quality of life of human societies.

Psychopolitics Byung-Chul Han. 2017-12-05 Exploring how neoliberalism has discovered the productive force of the psyche Byung-Chul Han, a star of German philosophy, continues his passionate critique of neoliberalism, trenchantly describing a regime of technological domination that, in contrast to Foucault's biopower, has discovered the productive force of the psyche. In the course of discussing all the facets of neoliberal psychopolitics fueling our contemporary crisis of freedom, Han elaborates an analytical framework that provides an original theory of Big Data and a lucid phenomenology of emotion. But this provocative essay proposes counter models too, presenting a wealth of ideas and surprising alternatives at every turn.

Supermadre Elsa M. Chaney. 2014-07-03 The title of this book, Supermadre, is ironic. It means, not that women have begun to exercise real power in Latin American political life, but that their participation is mostly confined to roles that are extensions of their roles as mothers—health, education, welfare, for example—and then only on the lower levels of policy-making. Elsa Chaney begins her study with an examination of various attempts to explain women's virtual absence from decision-making councils not only in Latin America but also world-wide, concluding that their motherhood role has had the profoundest effect on the nature of their political activities. She then analyzes the images and realities of women in Latin American society from colonial times to the present. The remainder of the book is a detailed study of women in politics and government in Latin America, with emphasis on the contrasting cases of Peru and Chile. In conclusion, Chaney suggests that women will make only slow progress toward full participation in public life until they themselves stop seeing their role in politics as that of the supermadre.

Debt Nina G. Jones. 2014-12-24 I don't know what I was thinking when I hired someone to attack me. Maybe I was bored, or lonely, or there was a void so deep inside of me that I needed something explosive to fill it. It was supposed to be safe. A thrill. A way to break through the monotony of everyday life. It was an illusion of danger that I could walk away from as soon as it was over. Except that it wasn't. Because I had been in danger long before I ever invited it into my life. -- My mission is almost complete. The bubbling boil of vengeance that heats my blood might finally simmer. She is the last piece of the puzzle. Once I destroy her, everyone who ever hurt me will have paid their debt. It was supposed to be quick and easy, but as soon as I met her it got complicated. Very complicated.--Publisher's description.

Creating Low Carbon Cities Shobhakar Dhakal,Matthias Ruth.2017-03-10 This book addresses key topics in the current deliberations and debates on low carbon cities that are underway globally. Contributions by experts from around the world focus on the key factors required for creating low carbon cities. These include appropriate infrastructure, ensuring co-benefits of climate actions, making best use of knowledge and information, proper accounting of emissions, and social factors such as behavioral change. Readers will gain a better understanding of these drivers and explore potential transformation pathways for cities. Particular emphasis is given to the current situation of energy consumption and greenhouse gas (GHG) emissions at the urban level, stressing the complexity of measuring GHG emissions from cities. Chapters also shed new light on the long-term transformation pathways towards low carbon. This book discusses key challenges and opportunities in all these domains to aid in creating low carbon cities, making it of value to policy makers, researchers in academia and consultants working on climate change and energy issues. "The low carbon cities agenda is of bold ambition and demands rapid societal transformation. This book provides invaluable information and analysis on how the goals of this agenda can be achieved and what will be the significant obstacles in the way. The content in the book goes below the surface to reveal on-the-ground economic, engineering and equity issues that are at the heart of the Paris Climate Agreement and the ensuing policy debates. In this way, Creating Low Carbon Cities serves as a critical scholarly benchmark and as a toolkit for further action. William Solecki, Professor, Institute for Sustainable Cities, City University of New York Creating Low Carbon Cities provides a refreshingly critical approach to low-carbon urban development, what has been achieved so far and the challenges ahead. It will be an important data-driven resource for local leaders, sustainability practitioners and urban planners." Debtors' Prison Robert Kuttner.2013-04-30 One of our foremost economic thinkers challenges a cherished tenet of today's financial orthodoxy: that spending less, refusing to forgive debt, and shrinking government—"austerity"—is the solution to a persisting economic crisis like ours or Europe's, now in its fifth year. Since the collapse of September 2008, the conversation about economic recovery has centered on the question of debt: whether we have too much of it, whose debt to forgive, and how to cut the deficit. These questions dominated the sound bites of the 2012 U.S. presidential election, the fiscal-cliff debates, and the perverse policies of the European Union. Robert Kuttner makes the most powerful argument to date that these are the wrong questions and that austerity is the wrong answer. Blending economics with historical contrasts of effective debt relief and punitive debt enforcement, he makes clear that universal belt-tightening, as a prescription for recession, defies economic logic. And while the public debt gets most of the attention, it is private debts that crashed the economy and are sandbagging the recovery—mortgages, student loans, consumer borrowing to make up for lagging wages, speculative shortfalls incurred by banks. As Kuttner observes, corporations get to use bankruptcy to walk away from debts. Homeowners and small nations don't. Thus, we need more public borrowing and investment to revive a depressed economy, and more forgiveness and reform of the overhang of past debts. In making his case, Kuttner uncovers the double standards in the politics of debt, from Robinson Crusoe author Daniel Defoe's campaign for debt forgiveness in the seventeenth century to the two world wars and Bretton Woods. Just as debtors' prisons once prevented individuals from surmounting their debts and resuming productive life, austerity measures shackle, rather than restore, economic growth—as the weight of past debt crushes the economy's future potential. Above all, Kuttner shows how austerity serves only the interest of creditors—the very bankers and financial elites whose actions precipitated the collapse. Lucid, authoritative, provocative—a book that will shape the economic conversation and the search for new solutions.

Objects and Others George W. Stocking.1988-11-09 History of Anthropology is a series of annual volumes, inaugurated in 1983, each of which treats an important theme in the history of anthropological inquiry. Objects and Others, the third volume, focuses on a number of questions relating to the history of museums and material culture studies: the interaction of museum arrangement and anthropological theory; the tension between anthropological research and popular education; the contribution of museum ethnography to aesthetic practice; the relationship of humanistic and anthropological culture, and of ethnic artifact and fine art; and, more generally, the representation of culture in material objects. As the first work to cover the development of museum anthropology since the mid-nineteenth century, it will be of great interest and value not only to anthropologist, museologists, and historians of science and the social sciences, but also to those interested in primitive art and its reception in the Western world.
