Managing the Curriculum David Middlewood,Neil Burton.2001-04-28 `Each chapter in the book is firmly rooted in research and is well referenced as one would expect of such a book. It will be of particular use to people with an academic interest in this aspect of school management but will also be thought-provoking for those who are involved in the development of the curriculum within their institution´ - escalate This book explores many of the new aspects of the core business of schools and colleges, that is, the curriculum. Keeping the focus clearly on learning and teaching, the contributors explore the practical issues for managers at institutional level, within the context of their need to understand and analyze key educational values and principles. Part One presents overviews of theories and models of curriculum, while Part Two examines how these are applied through planning, monitoring and evaluating. Part Three explores in detail the various managerial roles within schools and colleges from leaders to those responsible for cross-curriculum work and special educational needs. The fourth part discusses the importance of effectively managing resources for the curriculum - the environment, support staff and finance. Contributors use empirical research evidence to analyze current curriculum trends whilst proposing various new models which are likely to emerge in the 21st century.

Asymmetries in Dialogue Ivana Marková,Klaus Foppa.1991 Although dialogues, face-to-face immediate interactions between two or more people, are always reciprocal, they are characterized by various kinds of asymmetrical dominance relationshipsrelationships which are embedded in a social context. At many local levels, asymmetries occur in turn-taking, initiatives and responses. At more global levels, patterns of dominance may result from culturally-established rules and inequalities of knowledge. The contributors to this book, all distinguished scholars of international repute, build upon the theoretical assumptions about dialogue established in their previous publication, The Dynamics of Dialogue. Using an interdisciplinary approach, they focus on both conceptual issues of dominance and on empirical research on inequalities in roles, status and knowledge. This book is certain to be of interest to all students and teachers of psychology. Contents: Preface; Asymmetries in Dialogue: Some Conceptual Preliminary, P. Linell and T. Luckmann; Asymmetries of Knowledge in Conversational Interactions, P. Drew; Facework and Control in Multi-Party Talk: A Paediatric Case Study, K. Aronsson; Suspect Stories: On Perspective-Setting in an Asymmetrical Situation, P. Linell and L. Gongs & Bamboo José Maceda.1998 This panorama is a pictorial view of music instruments starting with older bamboo and other instruments of undetermined age, going on two types of gongs-flat in Northern Luzon and bossed in the South. These two areas may be viewed as pocket cultures comparable to other pocket cultures in Borneo, Sumatra, other islands in Southeast Asia and the mountain regions south of and including Yunnan province of China, thus placing the music of Luzon and Mindanao in a larger geographical context. For example, mouth organs in Borneo and continental Southeast Asia are absent in the Philippines, where, however, separate pipes of panpipes are on occasion still being played by groups of boys among the Kalingga of Luzon. The musical elements of drone and melody identified in two lutes in Borneo or ensembles in Yunnan find examples in two players of the same tube zither in Mindanao and flat gongs in Luzon. The nearly 500 photographs in the book are almost all taken in the field, showing details of making and playing bamboo buzzers, jaw harps, zithers, percussion tubes, flutes and other instruments. Manners of tapping and sliding with the hands on flat gongs differ from beating them with sticks. Examples of big bossed gongs with wide rims (agung) struck with a mallet on the boss and a stick on the rim show affinities with a manner of playing bronze drums in Yunnan. In North Luzon, men and women dancing in circles with outstretched hands distinguish them from solo dancers with minimum body movements in the South.

Understanding by Design Grant P. Wiggins, Jay McTighe. 2005 What is understanding and how does it differ from knowledge? How can we determine the big ideas worth understanding? Why is understanding an important teaching goal, and how do we know when students have attained it? How can we create a rigorous and engaging curriculum that focuses on understanding and leads to improved student performance in today's high-stakes, standards-based environment? Authors Grant Wiggins and Jay McTighe answer these and many other questions in this second edition of *Understanding by Design*. Drawing on feedback from thousands of educators around the world who have used the UbD framework since its introduction in 1998, the authors have greatly revised and expanded their original work to guide educators across the K-16 spectrum in the design of curriculum, assessment, and instruction. With an improved UbD Template at its core, the book explains the rationale of backward design and explores in greater depth the meaning of such key ideas as essential questions and transfer tasks. Readers will learn why the familiar coverage- and activity-based approaches to curriculum design fall short, and how a focus on the six facets of understanding can enrich student learning. With an expanded array of practical strategies, tools, and examples from all subject areas, the book demonstrates how the research-based principles of *Understanding by Design* apply to district frameworks as well as to individual units of curriculum. Combining provocative ideas, thoughtful analysis, and tested approaches, this new edition of *Understanding by Design* offers teacher-designers a clear path to the creation of curriculum that ensures better learning and a more stimulating experience for students and teachers alike.

Physical Approach to Short-Term Wind Power Prediction Matthias Lange, Ulrich Focken. 2010-02-12 The effective integration of wind energy into the overall electricity supply is a technical and economical challenge because the availability of wind power is determined by fluctuating meteorological conditions. This book offers an approach to the ultimate goal of the short-term prediction of the power output of wind farms. Starting from basic aspects of atmospheric fluid dynamics, the authors discuss the structure of wind fields, the available forecast systems and the handling of the intrinsic, weather-dependent uncertainties in the regional prediction of the power generated by wind turbines. This book addresses scientists and engineers working in wind energy related R and D and industry, as well as graduate students and nonspecialist researchers in the fields of atmospheric physics and meteorology.
