Impact Evaluation in Practice, Second Edition Paul J. Gertler, Sebastian Martinez, Patrick Premand, Laura B. Rawlings, Christel M. J. Vermeersch. 2016-09-12 The second edition of the Impact Evaluation in Practice handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of

impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

The Philosophy and Practice of Science David B.

Teplow.2023-08-31 This book is a novel synthesis of the philosophy and practice of science, covering its diverse theoretical, metaphysical, logical, philosophical, and practical elements. The process of science is generally taught in its empirical form: what science is, how it works, what it has achieved, and what it might achieve in the future. What is often absent is how to think deeply about science and how to apply its lessons in the pursuit of truth, in other words, knowing how to know. In this volume, David Teplow presents illustrative examples of science practice, history and philosophy of science, and sociological aspects of the scientific community, to address commonalities among these disciplines. In doing so, he challenges cherished beliefs and suggests to students, philosophers, and practicing scientists new, epistemically superior, ways of thinking about and doing science.

Primary ICT: Extending Knowledge in Practice John

Duffy.2006-08-15 Still the biggest concern for many on initial teacher training courses is the acquisition of subject knowledge and the ability to translate that into effective teaching. This book addresses this - building on the core subject knowledge covered in the Achieving QTS series and relating it to classroom practice. It supports trainees in extending and deepening their knowledge of ICT and demonstrating how to apply it to planning and implementing lessons. Practical and up-to-date teaching examples are used to clearly contextualize subject knowledge. A clear focus on classroom practice helps trainees to build confidence and develop their own teaching strategies.

Practical SGML Eric van Herwijnen.2012-12-06 Many times there are subjects which demand further explanations and guidance written about them. Such is the case with SGML, the Standard Generalized Markup Language; and ISO Standard published in October, 1986 under the number 8879. There have been many conferences given on this topic, world-wide, as the interest in SGML exists in Europe, the US, Australia and Japan. This book is the first which contains information not only on ISO 8879 itself, but many helpful hints and ideas on developing SGML, applications and discussions of the current software written to be conforming to the ISO standard. 'This book is critical for any end-user and application developer to understand the many issues necessary to develop SGML implementations (software selection is one of the topics discussed) and SGML applications. A number of examples of the applications of SGML in various situations are discussed and one can expect that the book will stimulate further discussion of these. This book is a practical guide to various components of the language and the author's experience in development and working with SGML in his position as leader of the text processing section at CERN ensures that the guidance is based on practical first-hand experience at an installation with a large number of end-users of very varied experience.

From Lived Experience to the Written Word Pamela H.

Smith.2022-09-23 This book focuses on how literate artisans began to write about their discoveries starting around 1400: in other words, it explores the origins of technical writing. Artisans and artists began to publish handbooks, guides, treatises, tip sheets, graphs and recipe books rather than simply pass along their knowledge in the workshop. And they tried to articulate what the new knowledge meant. The popularity of these texts coincided with the founding of a new philosophy that sought to investigate nature in a new way. Smith shows how this moment began in the unceasing trials of the craft workshop, and ended in the experimentation of the natural scientific laboratory. These epistemological developments have continued to the present day and still inform how we think about scientific knowledge--

Language Policies and (Dis)Citizenship Vaidehi

Ramanathan.2013-08-07 This volume explores the concept of 'citizenship', and argues that it should be understood both as a process of becoming and the ability to participate fully, rather than as a status that can be inherited, acquired, or achieved. From a courtroom in Bulawayo to a nursery in Birmingham, the authors use local contexts to foreground how the vulnerable, particularly those from minority language backgrounds, continue to be excluded, whilst offering a powerful demonstration of the potential for change offered by individual agency, resistance and struggle. In addressing questions such as 'under what local conditions does dis-citizenship happen?'; 'what role do language policies and pedagogic practices play?' and 'what kinds of margins and borders keep humans from fully participating'? The chapters in this volume shift the debate away from visas and passports to more uncertain and contested spaces of interpretation.
