Chased by the Light Jim Brandenburg.2001 Award-winning nature photographer Jim Brandenburg gave himself a challenge: for ninety days between the autumnal equinox and the winter solstice, he would take only one photograph each day. This exquisite book, now in softcover, is the result of that bold and immensely personal project. Through the accompanying essay, Brandenburg shares his innermost thoughts and passions as he witnesses the cycle of nature near his home in the northwoods of Minnesota. Brandenburg also contributes new photos and an Epilog that illustrates and discusses the devastating summer wind storm that wreaked havoc on the locations photographed for the original project.

Night Vision Troy Paiva.2013-05-21 A booming subculture is on the rise: dubbed Urban Exploration, it involves sneaking into abandoned or off-limits factories, aviation boneyards, decommissioned bases, and other derelict features of the military/industrial landscape. Illuminated by histories of the sites documented, *Night Vision* reveals the remarkable discoveries of a new generation of explorers.

The Art, Science, and Craft of Great Landscape Photography, 2nd Edition Glenn Randall.2020-04-07

The Art, Science, and Craft of Great Landscape Photography, 2nd Edition teaches photographers how to convert their visual peak experiences—moments of extraordinary natural beauty that evoke a sense of wonder and awe—into stunning images that elicit the same awestruck emotion in their viewers. Author Glenn Randall is an experienced wilderness photographer, and whether you want to venture into the mountains for once-in-a-lifetime shots of raw nature, or simply hone your landscape photography skills from the safety of your back deck, Randall explains the art, science and craft behind creating stunning landscape photographs.

This fully updated edition of the best-selling first edition includes nearly all new imagery throughout the book, as well as a new first chapter, *Photographic Essentials*, to help beginners to landscape photography get up to speed quickly. Additionally, this second edition takes into account how Randall's techniques have changed and evolved since the first edition published—from photographic practices to how he uses smart phones and apps as important and powerful tools for landscape photography.

After discussing photographic essentials, Randall focuses on the art of landscape photography. He describes his three-step process for composing a photograph and shows how good composition is an organic process that begins with rules but ultimately transcends them. Randall then explores the science behind successful landscape photographs, which requires understanding key concepts from

geography, optics, vision, and psychology. These concepts include:

- How the position of the sun at sunrise and sunset varies throughout the year. This will help you plan when and where to shoot.
- Using optics to predict where rainbows will appear, how polarizers will interact with reflections, and where to find spectacular light.
- How to use topographic maps and computerized mapping tools to help you find promising shooting locations in the wilderness.
- Calculating exposures, achieving correct exposure in high-contrast lighting situations, and the best digital darkroom techniques.

With some practice and by applying the techniques that Randall teaches you, you will soon be ready to master the finer nuances of creating magnificent landscape photographs.

[Dusk to Dawn, 2nd Edition](#) Glenn Randall. 2024-01-02 Embrace the dark and conquer landscape photography at night! In the past, landscape photography largely ended when the last light of dusk faded from the sky. Today it's only beginning. The latest digital cameras have made it much easier to create images of the landscape at night that film and early digital photographers could only dream of. Equipped with off-the-shelf cameras, more and more photographers are venturing into the night, far beyond the comforting glow of city lights, and returning with spectacular images of places both familiar and unknown that are unlike anything seen before. *Dusk to Dawn: A Guide to Landscape Photography at Night, 2nd Edition*, is your guide to this new photographic world. In it, photographer Glenn Randall—author of the bestselling *The Art, Science, and Craft of Great Landscape Photography*—teaches you how to plan, shoot, and process professional-quality images of the Milky Way, the aurora, lunar eclipses, meteor showers, comets, star trails, and landscapes lit solely by moonlight. In this fully revised and updated second edition, Randall goes deeper into today's technology that allows for great landscape photography at night: from mirrorless cameras that now truly dominate the market (and require a different approach to focusing) to the apps photographers need to know to best prepare for a successful shoot (Photo Pills, Photo Ephemeris Web). This edition has also been updated with dozens of new photographs from the author, as well as new sections on

photographing comets, the zodiacal light, and noctilucent clouds. Throughout the book, Randall emphasizes ways to integrate beautiful depictions of the night sky with equally compelling renditions of the land below it to create complete landscape images that evoke a sense of place—and a sense of wonder. Equipped with the knowledge in this book, you will be able to create your own nocturnal masterpieces. George Shiras Jean-Christophe Bailly. 2015 Though sometimes dubbed the first wildlife photographer, George Shiras is not a prominent name in the history of photography. While his photos were shown at the Paris World Fair of 1900, Shiras—also a lawyer and politician—did not consider himself an artist; his goal was, above all, to document wildlife from the pre-environmental perspective to which he dedicated his life. In 1893, Shiras perfected the procedure of nocturnal flash photography in various regions of the US and Canada. It was in contact with hunters—and also with Native American guides or trappers—that he became initiated in the ways of wildlife, eventually exchanging the rifle for the camera, as he himself put it. Despite his aesthetic innocence, Shiras succeeded in capturing the first night-time wildlife photos ever created, thanks to both his use of flash photography and camera-trap equipment. This gorgeous hardcover compiles his prescient nocturnal photography. George Shiras III (1859-1942) was born in Allegheny, Pennsylvania. He served as a member of the Pennsylvania State House of Representatives in 1889 and 1890 and was elected to the 58th Congress. After his time in Congress, Shiras became engaged in biological research and wildlife photography; he was a member of the Boone and Crockett Club, a conservation organization founded by Theodore Roosevelt. In 1935, he published a two-volume set of over 960 of his wildlife photographs with the National Geographic Society.

Nocturne Traer Scott. 2014-09-02 Whether fierce, cuddly, startling, mysterious, or some indefinable combination of all of the above, nocturnal animals never fail to fascinate. In *Nocturne: Creatures of the Night*, celebrated animal photographer Traer Scott takes the viewer on a journey through nighttime in the animal kingdom, revealing some of nature's most elusive creatures. Bats, big cats, flying squirrels, tarantula, owls, kangaroo mice, giant moths, sloth, several species of snakes, and a Madagascar hissing cockroach are only a few of the animals illuminated in these lushly detailed portraits. Seventy-five full-color photographs of forty different species are accompanied by informed but accessible descriptions of each animal's habits and habitats, and an introduction provides personal insight into how Scott captures her astonishing images. *Nocturne* is a compelling view of the rarely seen darkness dwellers who populate the night.

Magic Light and the Dynamic Landscape Jeanine Leech. 2014-07-15 Moments of peak action are well-known in sports photography, but they also happen in nature photography. The light can change within seconds and the best light may occur only long enough for a single frame. To create dramatic images, landscape photographers must first recognize those moments of magic light that get the heart pumping and blood flowing. While the sunrise and sunset hours provide recognized opportunities, the keen photographer will soon see that magic light can also happen at other times of the day. (Have you ever noticed how dramatic the sky can be before or after storm? Or seen a shaft of light shimmering through a snow squall over the mountain ridge?) After identifying the light, capturing the moment requires fast action; often, you need to set up fast and shoot within seconds to get the shot. At every phase of the process, from finding magic light throughout the day to making best use of it when you do, this book arms you with the skills you need to succeed—and use magic light to transform everyday landscapes into ethereal visions.

If you're looking for some fun fiction to enjoy on an Android device, Google's bookshop is worth a look, but Play Books feel like something of an afterthought compared to the well developed Play Music. You can search Google Books for any book or topic. In this case, let's go with "Alice in Wonderland" since it's a well-known book, and there's probably a free eBook or two for this title. The original work is in the public domain, so most of the variations are just with formatting and the number of illustrations included in the work. However, you

might also run into several copies for sale, as reformatting the print copy into an eBook still took some work. Some of your search results may also be related works with the same title. Below are some of the most popular file types that will work with your device or apps. See this eBook file compatibility chart for more information.
