Tax Compliance in Tanzania Kibuta Ongwamuhana.2011 This book examines the problem of low-level tax compliance in Tanzania. It proceeds from the premise that high-level taxpayer compliance is essential to the success of the tax system. The author argues that tax enforcement alone will not of itself lead to high level tax compliance, and posits that there is a strong link between good governance and compliance. He argues further that taxpayers' attitudes towards taxation and towards government in general are formed in a social context, including factors such as perceived fairness of the tax structure, the ability of government to deliver services to its people and the legitimacy of government.

Designing Performance Robert Taliencio.2004 During the past decade, diverse developing countries have introduced radical reforms in their collection of taxes. In more than 15 countries, traditional tax departments have been granted the status of semiautonomous revenue authorities (ARAs), which are designed with a number of autonomy-enhancing features, including self-

financing mechanisms, boards of directors with high-ranking public and private sector representatives, and sui generis personnel systems. Taliercio addresses gaps in the public management and tax administration literatures by closely examining ARA reforms in Kenya, Mexico, Peru, South Africa, Uganda, and Venezuela from their inception to the early 2000s. Using the comparative case study method, he tackles three questions. First, what has motivated the wave of ARA reforms over the past decade? The author argues that from a public management perspective, reformers intended to use autonomy to enhance bureaucratic performance in low-capacity public sectors. Second, is there a connection between autonomy and performance? Focusing on revenue collection, compliance management, taxpayer services, human resource management, and administrative costs, the author suggests that autonomy is associated with higher levels of performance. He also makes the case that higher levels of autonomy are associated with higher levels of performance. Third, if there is a connection between autonomy and performance, which specific design features matter most and why? In spite of the popularity of the ARA reform, there is no consensus on best practice in organizational design. The author offers hypotheses based on the cases about why certain designs work better than others, and makes specific recommendations for the next generation of ARA reforms. Kenya is shrinking. Indeed, the recent recession in developed countries was a wakeup call to many that the expected resources could one day dry up. This is happening when the need for support is increasing, hence, the need to become self sustainable and to increase the level of resources that can be raised domestically. Domestic resource mobilization (DRM) refers to the savings and investment generated by households, domestic firms, and government. The need for African countries to mobilize domestic resources as a medium-to long-term goal is now widely accepted. In the past, Africa has been rated poorly as relates to saving and investment. A sustained increase in growth rates require higher level of savings and investment, as well as increased investment productivity. Developing countries and those in transition are at present confronting unsustainable fiscal deficits; unabated debt service charges and declining external assistance, seriously affecting their development process. Domestic tax revenues are the most sustainable source of financing for public expenditures in developing countries. The experience with domestic resource mobilization of developing countries over the last 25 years has been mixed. In countries such as Botswana, Israel, Kuwait and Seychelles, the central government revenue's share in GDP has been more than 40 percent on average. The issue of tax compliance is extremely important both to those concerned with the key role increased tax yields can play in restoring macroeconomic balance and to those concerned with tax policy and its effects on the economy in general. However, the ability of developing countries' governments to raise direct tax revenues is constrained by a number of external and internal factors. [...]

The New Fiscal Sociology Isaac William Martin,Ajay K.

Mehrotra,Monica Prasad.2009-07-13 The New Fiscal Sociology: Taxation in Comparative and Historical Perspective demonstrates that the study of taxation can illuminate fundamental dynamics of modern societies. The sixteen essays in this collection offer a state-of-the-art survey of the new fiscal sociology that is emerging at the intersection of sociology, history, political science, and law. The contributors include some of the foremost comparative historical scholars in these disciplines and others. They approach the institution of taxation as a window onto the changing social contract. Their chapters address the social and historical sources of tax policy, the problem of how taxes persist, and the social and cultural consequences of taxation. They trace fundamental connections between tax institutions and macrohistorical phenomena - wars, shifting racial boundaries, religious traditions, gender regimes, labor systems, and more.

Electronic Fiscal Devices (EFDs) An Empirical Study of their Impact on Taxpayer Compliance and Administrative Efficiency

Peter Casey,Patricio Castro.2015-03-30 Several administrations have adopted electronic fiscal devices (EFDs) in their quest to combat noncompliance, particularly as regards sales and the value-added tax (VAT) payable on sales. The introduction of EFDs typically requires considerable effort and has costs both for the administration and for the taxpayers that are affected by the requirements of the new rules. Despite their widespread use, and their considerable cost, EFDs can only be effective if they are a part of a comprehensive compliance improvement strategy that clearly identifies risks for the different segments of taxpayers and envisages measures to mitigate these risks. EFDs should not be construed as the “silver bullet” for improving tax compliance: as with any other technological improvement the deployment of fiscal devices alone cannot achieve meaningful results, whether in terms of revenue gains or permanent compliance improvements.

Taxation in Developing Countries Roger Gordon.2010-07-05

Taxes are a crucial policy issue, especially in developing countries. Just recently, proposals to raise middle-class taxes toppled the Bolivian government, and plans to extend or increase the value-added tax caused political unrest in Ecuador and Mexico. Despite the impact of tax policy on developing countries, a comprehensive study has yet to be written. Treating Argentina, Brazil, India, Kenya, Korea, and Russia as key case studies, this volume outlines the major aspects of current tax codes and explores their economic and political implications. Examples of both the poorest and wealthiest developing countries, Argentina,

Brazil, India, Kenya, Korea, and Russia uniquely demonstrate the diverse fiscal problems of tax reform. Each economy relies heavily on indirect and corporate income taxes, though recently some have reduced their tariff rates and have switched from excise to value-added taxes. There is a large, informal economy in most of these countries, and tax evasion by firms is a significant concern. As a result, tax revenue remains low, even though rates are as high as those in developed economies. Also, unconventional methods to collect revenue have been implemented, including bank debit taxes, state ownership of firms, and implicit taxes on individuals in the informal sector. Exploring these and other concerns, as well as changes in tax law, administration, and fiscal pressures, this comprehensive anthology clarifies the current landscape of tax administration and the economic future of the world's poorer economies.

The specific objectives of this study are; to identify the effect of monthly rental income on rental revenue collection, to determine the effects of withholding rental income on rental revenue collection, to find out the effect of tax amnesty on rental revenue collection and to investigate the effect of block management systems sector on rental revenue collection The study is guided by the dynamic theory of public spending, taxation, and debt and the technological advancement theory.
