IoT and Cloud Computing Advancements in Vehicular Ad-Hoc Networks Rao, Ram Shringar,Jain, Vishal,Kaiwartya, Omprakash,Singh, Nanhay.2020-03-20 The optimization of traffic management operations has become a considerable challenge in today's global scope due to the significant increase in the number of vehicles, traffic congestions, and automobile accidents. Fortunately, there has been substantial progress in the application of intelligent computing devices to transportation processes. Vehicular ad-hoc networks (VANETs) are a specific practice that merges the connectivity of wireless technologies with smart vehicles. Despite its relevance, empirical research is lacking on the developments being made in VANETs and how certain intelligent technologies are being applied within transportation systems. IoT and Cloud Computing Advancements in Vehicular Ad-Hoc Networks provides emerging research exploring the theoretical and practical aspects of intelligent transportation systems and analyzing the modern techniques that are being applied to smart vehicles through cloud technology. Featuring coverage on a broad range of topics such as health monitoring, node localization, and fault tolerance, this book is ideally designed for network designers, developers, analysts, IT specialists, computing professionals, researchers, academics, and post-graduate students seeking current research on emerging computing concepts and developments in vehicular ad-hoc networks.

Toxocara Celia Holland,H. V. Smith.2006 Toxocara is a parasitic helminth worm which continues to stimulate both public concern and scientific interest. Toxocara canis and T.cati, the most studied species, are gastrointestinal parasites of dogs and cats and their eggs can contaminate the environment, thus exposing humans and other mammals and birds to infection. Many questions remain unanswered about the host-parasite relationship, its epidemiology and public health significance. Veterinarians and clinicians are interested in its importance as a zoonosis. The parasite's capacity to cause ocular disease is of concern to ophthalmologists, while its propensity to stimulate allergic manifestations is of interest to allergologists, dermatologists and respiratory medicine specialists. Furthermore Toxocara provides a unique model system to explore questions in parasite biology.This book provides a comprehensive review of Toxocara and the disease it causes known as toxocariasis.

Signals and Systems Bernd Girod,Rudolf Rabenstein,Alexander Stenger.2001-06-08 This book provides a comprehensive, modern approach to signals and systems, concentrating on those aspects that are most relevant for applications such as communication systems and signal processing. Emphasis is placed on building the reader's intuition and problem-solving ability, rather than formal theorems and proofs. The coverage of the book is comprehensive, providing a broad overview, using a whole host of exercises. The wealth of the worked examples and problems complemented by solutions is particularly attractive. The level of mathematics is not too daunting for the good average student and the authors do their utmost to mitigate the difficulties, skilfully using worked examples. Condemned to Repeat? Fiona Terry.2013-04-12 Humanitarian groups have failed, Fiona Terry believes, to face up to the core paradox of their activity: humanitarian action aims to alleviate suffering, but by inadvertently sustaining conflict it potentially prolongs suffering. In *Condemned to Repeat?*, Terry examines the side-effects of intervention by aid organizations and points out the need to acknowledge the political consequences of the choice to give aid. The author makes the controversial claim that aid agencies act as though the initial decision to supply aid satisfies any need for ethical discussion and are often blind to the moral quandaries of aid. Terry focuses on four historically relevant cases: Rwandan camps in Zaire, Afghan camps in Pakistan, Salvadoran and Nicaraguan camps in Honduras, and Cambodian camps in Thailand. Terry was the head of the French section of *Medecins sans frontieres* (Doctors Without Borders) when it withdrew from the Rwandan refugee camps in Zaire because aid intended for refugees actually strengthened those responsible for perpetrating genocide. This book contains documents from the former Rwandan army and government that were found in the refugee camps after they were attacked in late 1996. This material illustrates how combatants manipulate humanitarian action to their benefit. *Condemned to Repeat?* makes clear that the paradox of aid demands immediate attention by organizations and governments around the world. The author stresses that, if international agencies are to meet the needs of populations in crisis, their organizational behavior must adjust to the wider political and socioeconomic contexts in which aid occurs.

Mobile Computing, Applications, and Services Petros Zerfos, Rebecca Montanari, Thomas Phan.2010-05-11 This proceedings volume includes the full research papers presented at the First International Conference on Mobile Computing, Applications, and Services (MobiCASE) held in San Diego, California, during October 26-29, 2009. It was sponsored by ICST and held in conjunction with the First Workshop on Innovative Mobile User Interactivity (WIMUI). MobiCASE highlights state-of-the-art academic and industry research work in - main topics above the OSI transport layer with an emphasis on complete end-to-end systems and their components. Its vision is largely influenced by what we see in the consumer space today: high-end mobile phones, high-bandwidth wireless networks, novel consumer and enterprise mobile applications, scalable software infrastructures, and of course an increasingly larger user base that is moving towards an almost a-mobile lifestyle. This year's program spanned a wide range of research that explored new features, algorithms, and infrastructure related to mobile platforms. We received submissions from many countries around the world with a high number from Europe and Asia in addition to the many from North America. Each paper received at least three independent reviews from our Technical Program Committee members during the Spring of 2009, with final results coming out in July. As a result of the review process, we selected 15 high-quality papers and complemented them with six invited submissions from leading researchers, reaching the final count of 21 papers in the program.
