Natural Language Generation Systems David D.

McDonald, Leonard Bolc.2012-12-06 Natural language generation is a field within artificial intelligence which looks ahead to the future when machines will communicate complex thoughts to their human users in a natural way. Generation systems supply the sophisticated knowledge about natural languages that must come into play when one needs to use wordings that will overpower techniques based only on symbolic string manipulation techniques. Topics covered in this volume include discourse theory, mechanical translation, deliberate writing, and revision. *Natural Language Generation Systems* contains contributions by leading researchers in the field. Chapters contain details of grammatical treatments and processing seldom reported on outside of full length monographs.

Applications of Stochastic Optimal Control to Economics and Finance Salvatore Federico, Giorgio Ferrari, Luca

Regis.2020-06-23 In a world dominated by uncertainty, modeling and understanding the optimal behavior of agents is of the utmost importance. Many problems in economics, finance, and actuarial science naturally require decision makers to undertake choices in stochastic environments. Examples include optimal individual consumption and retirement choices, optimal management of portfolios and risk, hedging, optimal timing issues in pricing American options, and investment decisions. Stochastic control theory provides the methods and results to tackle all such problems. This book is a collection of the papers published in the Special Issue *Applications of Stochastic Optimal Control to Economics and Finance*, which appeared in the open access

journal *Risks* in 2019. It contains seven peer-reviewed papers dealing with stochastic control models motivated by important questions in economics and finance. Each model is rigorously mathematically founded and treated, and the numerical methods are employed to derive the optimal solution. The topics of the book's chapters range from optimal public debt management to optimal reinsurance, real options in energy markets, and optimal portfolio choice in partial and complete information settings. From a mathematical point of view, techniques and arguments of dynamic programming theory, filtering theory, optimal stopping, one-dimensional diffusions and multi-dimensional jump processes are used.

Research on Teaching and Learning Probability Carmen Batanero, Egan J. Chernoff, Joachim Engel, Hollylynne S.

Lee, Ernesto Sánchez. 2016-07-12 This book summarizes the vast amount of research related to teaching and learning probability that has been conducted for more than 50 years in a variety of disciplines. It begins with a synthesis of the most important probability interpretations throughout history: intuitive, classical, frequentist, subjective, logical propensity and axiomatic views. It discusses their possible applications, philosophical problems, as well as their potential and the level of interest they enjoy at different educational levels. Next, the book describes the main features of probabilistic thinking and reasoning, including the contrast to classical logic, probability language features, the role of intuitions, as well as paradoxes and the relevance of modeling. It presents an analysis of the differences between conditioning and causation, the variability expression in data as a sum of random and causal variations, as well as those of probabilistic versus statistical thinking. This is followed by an analysis of probability's role and main presence in school curricula and an outline of the central expectations in recent curricular guidelines at the primary, secondary and high school level in several countries. This book classifies and discusses in detail the three

different research periods on students' and people's intuitions and difficulties concerning probability: early research focused on cognitive development, a period of heuristics and biases programs, and the current period marked by a multitude of foci, approaches and theoretical frameworks.

The Power to Arrest Robin S. Engel, Robert E. Worden, Nicholas Corsaro, Hannah D. McManus, Danielle Reynolds, Hannah Cochran, Gabrielle T. Isaza, Jennifer Calnon

Cherkauskas. 2019-07-06 This insightful volume examines key research questions concerning police decision to arrest as well as police-led diversion. The authors critically evaluate the tentative answers that empirical evidence provides to those questions, and suggest areas for future inquiry. Nearly seven decades of empirical study have provided extensive knowledge regarding police use of arrest. However, this research highlights important gaps in our understanding of factors that shape police decision-making and what is required to alter current police practice. Reviewing this research base, this brief takes stock of what is known empirically about all aspects related to the use of arrests, providing important insights on the knowledge needed to make evidence-based policy decisions moving forward. With the potential to better impact policy and programs for alternatives to arrest, this brief will appeal to researchers and practitioners in evidence-based policing and police decision-making, as well as those interested in alternatives to arrest and related fields such as public policy.

Evidence-based LSP Khurshid Ahmad, Margaret Rogers. 2007 This book presents a number of different perspectives on the central theme of 'evidence' and its interpretation in the study of specialist languages and their various uses. The principal topics include text corpora, citation patterns, some challenging dichotomies, terminology and knowledge management, and specialist translation. Each topic is presented in one of five parts, each with its own introduction. The volume includes contributions from

established and new researchers in the field, as well as well-known scholars from other disciplines who bring a fresh eye to LSP studies. The book presents selected papers from LSP2003, the 14th European Symposium on Language for Special Purposes held at the University of Surrey, Guildford, in co-operation with the AILA Scientific Commission on Language for Special Purposes.

Adaptive and Natural Computing Algorithms Andrej

Dobnikar, Uroš Lotric, Branko Šter. 2011-04-09 The two-volume set LNCS 6593 and 6594 constitutes the refereed proceedings of the 10th International Conference on Adaptive and Natural Computing Algorithms, ICANNGA 2010, held in Ljubljana, Slovenia, in April 2010. The 83 revised full papers presented were carefully reviewed and selected from a total of 144 submissions. The first volume includes 42 papers and a plenary lecture and is organized in topical sections on neural networks and evolutionary computation.

Radical Constructivism in Mathematics Education E.

Glaserfeld. 2006-04-11 Mathematics is the science of acts without things - and through this, of things one can define by acts. 1 Paul Valéry The essays collected in this volume form a mosaic of theory, research, and practice directed at the task of spreading mathematical knowledge. They address questions raised by the recurrent observation that, all too frequently, the present ways and means of teaching mathematics generate in the student a lasting aversion against numbers, rather than an understanding of the useful and sometimes enchanting things one can do with them. Parents, teachers, and researchers in the field of education are well aware of this dismal situation, but their views about what causes the wide-spread failure and what steps should be taken to correct it have so far not come anywhere near a practicable consensus. The authors of the chapters in this book have all had extensive experience in teaching as well as in educational research. They approach the problems they have isolated from

their own individual perspectives. Yet, they share both an overall goal and a specific fundamental conviction that characterized the efforts about which they write here. The common goal is to find a better way to teach mathematics. The common conviction is that knowledge cannot simply be transferred ready-made from parent to child or from teacher to student but has to be actively built up by each learner in his or her own mind.

A perfect introduction to the world of languages for children with or without their parents.

Molecules of Emotion Candace B. Pert.1997 Molecules of Emotion is a landmark work, full of insight and wisdom and possessing that rare power to change the way we see the world and ourselves.

Computational Materials Science June Gunn Lee.2016-11-25
This book covers the essentials of Computational Science and gives tools and techniques to solve materials science problems using molecular dynamics (MD) and first-principles methods. The new edition expands upon the density functional theory (DFT) and how the original DFT has advanced to a more accurate level by GGA+U and hybrid-functional methods. It offers 14 new worked examples in the LAMMPS, Quantum Espresso, VASP and MedeA-VASP programs, including computation of stress-strain behavior of Si-CNT composite, mean-squared displacement (MSD) of ZrO₂-Y₂O₃, band structure and phonon spectra of silicon, and Mo-S battery system. It discusses methods once considered too expensive but that are now cost-effective. New examples also include various post-processed results using VESTA, VMD, VTST,

and Medea.

Economic Perspectives on Incarceration and the Criminal Justice System Executive Office Executive Office of the

President. 2016-09-01 Calls for criminal justice reform have been mounting in recent years, in large part due to the extraordinarily high levels of incarceration in the United States. Today, the incarcerated population is 4.5 times larger than in 1980, with approximately 2.2 million people in the United States behind bars, including individuals in Federal and State prisons as well as local jails. The push for reform comes from many angles, from the high financial cost of maintaining current levels of incarceration to the humanitarian consequences of detaining more individuals than any other country. Economic analysis is a useful lens for understanding the costs, benefits, and consequences of incarceration and other criminal justice policies. In this report, we first examine historical growth in criminal justice enforcement and incarceration along with its causes. We then develop a general framework for evaluating criminal justice policy, weighing its crime-reducing benefits against its direct government costs and indirect costs for individuals, families, and communities. Finally, we describe the Administration's holistic approach to criminal justice reform through policies that impact the community, the cell block, and the courtroom.

Introduction to Computational Materials Science Richard LeSar. 2013-03-28 Emphasising essential methods and universal principles, this textbook provides everything students need to understand the basics of simulating materials behaviour. All the key topics are covered from electronic structure methods to microstructural evolution, appendices provide crucial background material, and a wealth of practical resources are available online to complete the teaching package. Modelling is examined at a broad range of scales, from the atomic to the mesoscale, providing students with a solid foundation for future study and research. Detailed, accessible explanations of the fundamental

equations underpinning materials modelling are presented, including a full chapter summarising essential mathematical background. Extensive appendices, including essential background on classical and quantum mechanics, electrostatics, statistical thermodynamics and linear elasticity, provide the background necessary to fully engage with the fundamentals of computational modelling. Exercises, worked examples, computer codes and discussions of practical implementations methods are all provided online giving students the hands-on experience they need.

Berry Phases in Electronic Structure Theory David

Vanderbilt.2018-10-31 Over the past twenty-five years, mathematical concepts associated with geometric phases have come to occupy a central place in our modern understanding of the physics of electrons in solids. These 'Berry phases' describe the global phase acquired by a quantum state as the Hamiltonian is changed. Beginning at an elementary level, this book provides a pedagogical introduction to the important role of Berry phases and curvatures, and outlines their great influence upon many key properties of electrons in solids, including electric polarization, anomalous Hall conductivity, and the nature of the topological insulating state. It focuses on drawing connections between physical concepts and provides a solid framework for their integration, enabling researchers and students to explore and develop links to related fields. Computational examples and exercises throughout provide an added dimension to the book, giving readers the opportunity to explore the central concepts in a practical and engaging way.

Metaphors and More Cottonwood Press.2009-09 This handy booklet for Grades 8-12 can perk up a poetry unit or help students truly understand certain figures of speech: alliteration, cliché, euphemism, hyperbole, idiom, metaphor, onomatopoeia, oxymoron, pun, and simile. Two interesting and student-friendly activities are provided for each literary term.

The System Of The World Neal Stephenson.2012-06-30 Neal Stephenson follows his highly-praised historical novels, Quicksilver and The Confusion, with the extraordinary third and final volume of the Baroque Cycle. The year is 1714. Daniel Waterhouse has returned to England, where he joins forces with his friend Isaac Newton to hunt down a shadowy group attempting to blow up Natural Philosophers with 'Infernal Devices' - time bombs. As Daniel and Newton conspire, an increasingly vicious struggle is waged for England's Crown: who will take control when the ailing queen dies? Tories and Whigs clash as one faction jockeys to replace Queen Anne with 'The Pretender' James Stuart, and the other promotes the Hanoverian dynasty of Princess Caroline. Meanwhile, a long-simmering dispute between Newton and Gottfried Wilhelm Leibniz comes to a head, with potentially cataclysmic consequences. Wildly inventive, brilliantly conceived, The System of the World is the final volume in Neal Stephenson's hugely ambitious and compelling saga. Filled with a remarkable cast of characters in a time of genius, discovery and change, the Baroque Cycle is a magnificent and unique achievement.

In Praise of Slow Carl Honore.2009-06-12 In the tradition of such trailblazing books as No Logo and The Tipping Point, In Praise of Slow heralds a growing international movement of people dedicated to slowing down the pace of our contemporary times and enjoying a richer, fuller life as a result. These days, almost everyone complains about the hectic pace of their lives. We live in a world where speed rules and everyone is under pressure to go faster. But when speed is king, anyone or anything that gets in our way, that slows us down, becomes an enemy. Thanks to speed, we are living in the age of rage. Carl Honore has discovered a movement that is quickly working its way into the mainstream. Groups of people are developing a recipe for living better in a fast-paced, modern environment by striving for a new balance between fast and slow. In an entertaining and hands-on

investigation of this new movement, Honore takes us from a Tantric sex workshop in a trendy neighbourhood in London, England to Bra, Italy, the home of the Slow Food, Slow Cities and Slow Sex movements. He examines how we can continue to live productive lives by embracing the tenets of the slow movement. A challenging take on the cult of speed, as well as a corrective look at how we can approach our lives with new understanding, *In Praise of Slow* uncovers a movement whose time has come.

Assignment Problems, Revised Reprint Rainer Burkard, Mauro Dell'Amico, Silvano Martello. 2012-10-31 *Assignment Problems* is a useful tool for researchers, practitioners and graduate students.

In 10 self-contained chapters, it provides a comprehensive treatment of assignment problems from their conceptual beginnings through present-day theoretical, algorithmic and practical developments. The topics covered include bipartite matching algorithms, linear assignment problems, quadratic assignment problems, multi-index assignment problems and many variations of these. Researchers will benefit from the detailed exposition of theory and algorithms related to assignment problems, including the basic linear sum assignment problem and its variations. Practitioners will learn about practical applications of the methods, the performance of exact and heuristic algorithms, and software options. This book also can serve as a text for advanced courses in areas related to discrete mathematics and combinatorial optimisation. The revised reprint provides details on a recent discovery related to one of Jacobi's results, new material on inverse assignment problems and quadratic assignment problems, and an updated bibliography.

15th Nordic-Baltic Conference on Biomedical Engineering and Medical Physics Kim Dremstrup, REES STEPHEN E., Morten Ølgaard Jensen. 2011-06-17 This volume presents the Proceedings of the 15th Nordic-Baltic Conference on Biomedical Engineering and Medical Physics. NBC 2011 brought together science, education and business under the motto "Cooperation for health".

The topics covered by the Conference Proceedings include: Imaging, Biomechanics, Neural engineering, Sport Science, Cardio-pulmonary engineering, Medical Informatics, Ultrasound, Assistive Technology, Telemedicine, and General Biomedical Engineering.

Automatic Text Simplification Horacio Saggion.2022-05-31
Thanks to the availability of texts on the Web in recent years, increased knowledge and information have been made available to broader audiences. However, the way in which a text is written—its vocabulary, its syntax—can be difficult to read and understand for many people, especially those with poor literacy, cognitive or linguistic impairment, or those with limited knowledge of the language of the text. Texts containing uncommon words or long and complicated sentences can be difficult to read and understand by people as well as difficult to analyze by machines. Automatic text simplification is the process of transforming a text into another text which, ideally conveying the same message, will be easier to read and understand by a broader audience. The process usually involves the replacement of difficult or unknown phrases with simpler equivalents and the transformation of long and syntactically complex sentences into shorter and less complex ones. Automatic text simplification, a research topic which started 20 years ago, now has taken on a central role in natural language processing research not only because of the interesting challenges it poses but also because of its social implications. This book presents past and current research in text simplification, exploring key issues including automatic readability assessment, lexical simplification, and syntactic simplification. It also provides a detailed account of machine learning techniques currently used in simplification, describes full systems designed for specific languages and target audiences, and offers available resources for research and development together with text simplification evaluation techniques.

Global Education Monitoring Report 2020

UNESCO.2020-07-07 This publication assesses progress towards Sustainable Development Goal 4 (SDG 4) on education and its ten targets, as well as other related education targets in the SDG agenda. It addresses inclusion in education, drawing attention to all those excluded from education, because of background or ability. The report is motivated by the explicit reference to inclusion in the 2015 Incheon Declaration, and the call to ensure an inclusive and equitable quality education in the formulation of SDG 4, the global goal for education. It reminds us that, no matter what argument may be built to the contrary, we have a moral imperative to ensure every child has a right to an appropriate education of high quality.

How to Use Problem-based Learning in the Classroom Robert Delisle, Association for Supervision and Curriculum

Development.1997 Engaging and motivating students--especially the least motivated learners--is a daily challenge. But with the process of problem-based learning (PBL), any teacher can create an exciting, active classroom where students themselves eagerly build problem-solving skills while learning the content necessary to apply them. With problem-based learning, students' work begins with an ill-defined problem. Key to this problem is how it explicitly links something important in students daily lives to the classroom. This motivational feature is vital as students define the what, where, and how of resolving the problem situation.

Problem-based learning may sound potentially chaotic and haphazard, but it rests on the firm foundation of a teacher's work behind the scenes. The teacher develops a problem long before students see it, specifically choosing the skills and content the

problem will emphasize and matching those to curriculum and standards. Though a PBL problem will have no right answer, the teacher structures the experience so that specific learning takes place as students generate the problem-solving steps, research issues, and produce a final product. The teacher guides without leading, assists without directing.

Applications of Combinatorial Optimization Vangelis Th.

Paschos.2014-09-15 Combinatorial optimization is a multidisciplinary scientific area, lying in the interface of three major scientific domains: mathematics, theoretical computer science and management. The three volumes of the Combinatorial Optimization series aim to cover a wide range of topics in this area. These topics also deal with fundamental notions and approaches as with several classical applications of combinatorial optimization. Concepts of Combinatorial Optimization, is divided into three parts: - On the complexity of combinatorial optimization problems, presenting basics about worst-case and randomized complexity; - Classical solution methods, presenting the two most-known methods for solving hard combinatorial optimization problems, that are Branch-and-Bound and Dynamic Programming; - Elements from mathematical programming, presenting fundamentals from mathematical programming based methods that are in the heart of Operations Research since the origins of this field.

Accountability in education: meeting our commitments

UNESCO.2017-10-30 The second edition of the Global Education Monitoring Report (GEM Report) presents the latest evidence on global progress towards the education targets of the UN Sustainable Development Goals. With hundreds of millions of people still not going to school, and many not achieving minimum skills at school, it is clear education systems are off track to achieve global goals. The marginalized currently bear the most

consequences but also stand to benefit the most if policy-makers pay sufficient attention to their needs. Faced with these challenges, along with tight budgets and increased emphasis on results-oriented value for money, countries are searching for solutions. Increased accountability often tops the list. The 2017/8 GEM Report shows the entire array of approaches to accountability in education. It ranges from countries unused to the concept, where violations of the right to education go unchallenged, to countries where accountability has become an end in itself instead of a means to inclusive, equitable and high-quality education and lifelong learning for all. The report emphasizes that education is a shared responsibility. While governments have primary responsibility, all actors - schools, teachers, parents, students, international organizations, private sector providers, civil society and the media ^{Ø3} have a role in improving education systems. The report emphasized the importance of transparency and availability of information but urges caution in how data are used. It makes the case for avoiding accountability systems with a disproportionate focus on narrowly defined results and punitive sanctions. In an era of multiple accountability tools, the report provides clear evidence on those that are working and those that are not.--Back cover.

Marianne Burkhalter + Christian Sumi Lynnette Widder.1999 Swiss architects Marianne Burkhalter and Christian Sumi are dedicated to an exploration of the nature of materials and construction. In the last fifteen years, they have built a series of remarkable buildings in wood and stone in Germany, Austria, and Switzerland. Their work is a thoughtful pursuit of the fundamentals of architectural construction-a style that, like that of Zumthor's buildings, might be called Alpine minimalism. Their interest in simple forms and shapes, in luminous color, in the natural grain patterns of wood, and in the opportunities afforded by joinery and other forms of craftsmanship are evident in every aspect of their built work. This comprehensive monograph

includes an in-depth look at 25 of Burkhalter and Sumi's projects, including their most famous built work, the Hotel Zurichberg. Essays by Eugene Asse, Detlef Mertins, Steven Spier, and Lynnette Widder, based respectively in Moscow, Toronto, London, and New York, explore their unique style and demonstrate the growing international acknowledgement of their practice. -- Publisher description.

Genotyping Stefan J. White, Stuart Cantsilieris. 2016-11-08 This volume explores a broad range of different genotyping techniques. Genotyping: Methods and Protocols consists of chapters that cover numerous topics such as: an overview of multiplexed microsatellite analysis; High Resolution Melt analysis and TaqMan-based assays; in situ analysis of variants in single RNA molecules; the MassARRAY system and Molecular Inversion Probes; Pulsed Field Gel Electrophoresis, Parologue Ratio Test, and Multiplex Ligation-Dependent Probe Amplification; long-

range PCR combined with PacBio sequencing; Targeted Locus Amplification; Multilocus Sequence Typing and rapid SNP detection with pyrosequencing; and genotyping-by-sequencing for plant analysis. Finally, the volume concludes with a summary of pertinent points to describe genetic variation. Written in the highly successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Thorough and practical, *Genotyping: Methods and Protocols* is a valuable resource for anyone interested in learning more about the diverse field of genotyping.

Chance Encounters: Probability in Education R. Kapadia, M. Borovcnik. 2012-12-06

This book has been written to fill a substantial gap in the current literature in mathematical education. Throughout the world, school mathematical curricula have incorporated probability and statistics as new topics. There have been many research papers written on specific aspects of teaching, presenting novel and unusual approaches to introducing ideas in the classroom; however, there has been no book giving an overview. Here we have decided to focus on probability, making reference to inferential statistics where appropriate; we have deliberately avoided descriptive statistics as it is a separate area and would have made ideas less coherent and the book excessively long. A general lead has been taken from the first book in this series written by the man who, probably more than everyone else, has established mathematical education as an academic discipline. However, in his exposition of didactical phenomenology, Freudenthal does not analyze probability. Thus, in this book, we show how probability is able to organize the world of chance and idealized chance phenomena based on its development and applications. In preparing these chapters we and our co-authors have reflected on our own acquisition of probabilistic ideas, analyzed textbooks, and observed and reflect

ed upon the learning processes involved when children and adults struggle to acquire the relevant concepts.

Theatre And (Im)migration Yana Meerzon.2019-06-18 Theatre and (Im)migration shines a bright light on the impact that immigrant artists have made and continue to make on the development of Canadian theatre, from themes, characters, and world issues to financial structures and artistic techniques. The collection of essays demonstrates how the increased presence of immigrant theatre artists actively contributing to English- and French-Canadian theatre prompt their audiences to rethink fundamental concepts of nationalism and multiculturalism. Contributors include Moira Day, Alan Filewood, Aida Jordão, Ric Knowles, Natasha Martina Koechl, Rebecca Margolis, Lisa Ndejuru, Nicole Nolette, Eleanor Ty, and many more.

Proceedings of the 13th International Congress on Mathematical Education Gabriele Kaiser.2017-10-31 This book is open access under a CC BY 4.0 license. The book presents the Proceedings of the 13th International Congress on Mathematical Education (ICME-13) and is based on the presentations given at the 13th International Congress on Mathematical Education (ICME-13). ICME-13 took place from 24th- 31st July 2016 at the University of Hamburg in Hamburg (Germany). The congress was hosted by the Society of Didactics of Mathematics (Gesellschaft für Didaktik der Mathematik - GDM) and took place under the auspices of the International Commission on Mathematical Instruction (ICMI). ICME-13 brought together about 3.500 mathematics educators from 105 countries, additionally 250 teachers from German speaking countries met for specific activities. Directly before the congress activities were offered for 450 Early Career Researchers. The proceedings give a comprehensive overview on the current state-of-the-art of the discussions on mathematics education and display the breadth and deepness of current research on mathematical teaching-and-learning processes. The book introduces the major activities of ICME-13, namely articles

from the four plenary lecturers and two plenary panels, articles from the five ICMI awardees, reports from six national presentations, three reports from the thematic afternoon devoted to specific features of ICME-13. Furthermore, the proceedings contain descriptions of the 54 Topic Study Groups, which formed the heart of the congress and reports from 29 Discussion Groups and 31 Workshops. The additional important activities of ICME-13, namely papers from the invited lecturers, will be presented in the second volume of the proceedings.

The Hidden Crisis .2011-01-01 When wars break out, international attention and media reporting invariably focus on the most immediate images of human suffering. Yet behind these images is a hidden crisis. Across many of the world's poorest countries, armed conflict is destroying not just school infrastructure, but the hopes and ambitions of generations of children. *The hidden crisis: Armed conflict and education* documents the devastating effects of armed conflict on education. It examines the widespread human rights abuses keeping children out of school. The Report challenges an international aid system that is failing conflict-affected states, with damaging consequences for education. It warns that schools are often used to transmit intolerance, prejudice and social injustice. This ninth edition of the *Education for All Global Monitoring Report* calls on governments to demonstrate greater resolve in combating the culture of impunity surrounding attacks on schoolchildren and

schools. It sets out an agenda for fixing the International aid architecture. And it identifies strategies for strengthening the role of education in peacebuilding. The Report includes statistical indicators on all levels of education in more than 200 countries and territories. It serves as an authoritative reference for education policy-makers, development specialists, researchers and the media

Financial Optimization Stavros A. Zenios.1993 The use of formal mathematical models and optimization in finance has become common practice in the 1980s and 1990s. This book clearly presents the exciting symbiosis between the fields of finance and management science/operations research. Prominent researchers present the state of the art in financial optimization, while analysts from industry discuss the latest business techniques practised by financial firms in New York, London and Tokyo. The book covers a wide range of topics: portfolio management of equities and fixed income investments, the pricing of complex insurance, mortgage and other asset-backed products, and models for risk-management and diversification.

Heartstream Tom Pollock.2019-07 I just wanted to see you. Before the end. A taut psychological thriller about obsession, fame and betrayal, for fans of Black Mirror. Cat is in love. Always the sensible one, she can't believe that she's actually dating, not to mention dating a star. But the fandom can't know. They would eat her alive. And first at the buffet would definitely be her best friend, Evie. Amy uses Heartstream, a social media app that allows others to feel your emotions. She broadcasted every moment of her mother's degenerative illness, and her grief

following her death. It's the realest, rawest reality TV imaginable. But on the day of Amy's mother's funeral, Amy finds a strange woman in her kitchen. She's rigged herself and the house with explosives - and she's been waiting to talk to Amy for a long time. Who is she? A crazed fan? What does she want? Amy and Cat are about to discover how far true obsession can go.
