Building with Paper Dario Donetti, Cara Rachele. 2021-05-15 The introduction of paper is one of the major innovations of Early Modern architecture, and it had profound effects on its design processes. Wider use of paper changed representational conventions, while communication networks were affected by the many implications of portability and reproducibility: circulation of models for study and design increased, and new possibilities of remote control of the building site emerged. The material dimensions of these practices are the subject of the present volume, which collects essays that engage with the manifold inter- and multi-medial complexities of Italian Renaissance architectural drawings on paper.

Single-Handedly Nalina Moses. 2019-05-07 Part of the generation of architects who were trained to draw both by hand and with digital tools, Nalina Moses recently returned to hand drawing. Finding it to be direct, pleasurable, and intuitive, she wondered whether other architects felt the same way. Single-Handedly is the result of this inquiry. An inspiring collection of 220 hand drawings by more than forty emerging architects and well-known practitioners from around the world, this book explores the reasons they draw by hand and gives testimony to the continued vitality of hand drawing in architecture. The powerful yet intimate drawings carry larger propositions about materials, space, and construction, and each one stands on its own as a work of art.

The Art of Architectural Modelling in Paper (Classic Reprint) T. A. Richardson. 2017-05-31 Excerpt from The Art of Architectural Modelling in Paper Improvement, and then let him continue to labour perseveringly and diligently until he gains a perfect command of his knife and materials, and few will be found but will admit that the result at last obtained fully repays him for his time and labour. There is no doubt that the art is of very great antiquity, and that in former times no building of importance was erected without one having been previously constructed. This not only aided the successful carrying out of the architect's drawings, but enabled him and his employer to judge better as to the general effect the work would have when completed. Shigeru Ban Shigeru Ban, Eugenia Bell.2001-05 Shigeru Ban may be best known for his evocative Curtain Wall House in Tokyo—a highlight of the Museum of Modern Art's 1999 Un-Private House exhibit—but few know the range of this Japanese architect's work. In this first English-language monograph on Ban, 30 built projects reveal his inventiveness and humanitarianism. Ban's primary objectives in his work are the use of low cost materials and the dissolution of the boundaries between interior and exterior spaces. His paper tube designs, which he first created as emergency housing for victims of Rwanda's civil war, were later reconfigured for earthquake victims in Kobe and are currently incorporated in Ban's Japanese Pavilion at Hannover Expo 2000. Influenced by the Japanese tradition of linking the home with the surrounding environment, Ban has created buildings such as Hanegi Forest and Walls—less House that invite nature to coexist with design.

Cut and Assemble Frank Lloyd Wright's Robie House Edmund V. Gillon, Jr..1987-01-01 Designed in 1908 as a suburban residence for a Chicago businessman, the Robie House embodied the full spirit of Frank Lloyd Wright's pioneering prairie school of design. Today, this masterpiece of modern architecture remains a classic example of the builder's ideas and ideals. Long, low, streamlined and exemplary of the prairie's spaciousness, the Robie House profoundly influenced the course of American architecture — so much so that a model of Wright's innovative structure has long been on display at the Museum of Modern Art in Manhattan. Now model builders as well as lovers of fine architecture can construct an accurate three-dimensional model of the Robie House, and thereby discover for themselves the harmonious interrelationships of parts and numerous other design details that make this home a world-famous architectural masterpiece. Printed in full color on sturdy card stock, the model comes complete with step-by-step instructions and exploded diagrams. A series of multi-level horizontal planes includes balconies, platforms, a porch and entrance court, while easy-to-follow directions clearly explain how to cut, fold and glue walls, doorways, windows, roof and other features. Students of architecture, miniaturists and paper engineers will delight in recreating an outstanding example of American residential architecture, which, in Wright's own words, has become a source of worldwide inspiration.

Building with Paper Ulrich Knaack, Rebecca Bach, Samuel Schabel.2022-12-19 Paper and cardboard as sustainable building materials are currently the subject of research and testing. They can be produced inexpensively, are made from renewable raw materials and are completely recyclable. The focus of their application is on temporary uses, such as for transitional schools, emergency shelters or microhomes. Properly protected from moisture and fire, the material proves to be durable. Design and aesthetic qualities are by no means neglected, as case studies by Pritzker Prize winner Shigeru Ban demonstrate: the Chengdu Elementary School, the Paper Concert Hall in Aquila or the Cardboard Cathedral in Christchurch all provided a sign of hope after devastating earthquakes. This introduction explains the technology of building with cardboard and paper and shows a wide range of examples.
