*Asymmetric Crisis in Europe and Possible Futures* Johannes Jäger,Elisabeth Springler.2015-04-10 The crisis in Europe is often discussed as a crisis of European integration or a crisis of national economies within Europe. Both the 'methodological Europeanism' and 'methodological nationalism' miss out the important links between economic and political processes at different spatial scales within Europe, and therefore, asymmetries and phenomena of uneven development. In addition, a discussion of possible scenarios which systematically addresses the implications of anti-crisis policies is missing. This volume seeks to close this gap by systematically integrating the analysis of economic policy or 'technical' solutions to the crisis within a broader framework of political economy. It argues that combining critical political economy approaches and post-Keynesian perspectives allows for a systematic understanding of the economic and political dimensions of the crisis. Although both approaches have the capacity to deal with asymmetries and uneven development, the heterogeneity in Europe has been an often largely neglected dimension of analysis. However, this recent crisis has shown that this is an essential dimension which has to be addressed in order to better understand the dynamics of European development and integration. Hence, this book aims to deal with asymmetries in Europe and to bridge the gap between the two perspectives. This work will initiate an integrative debate that is crucial for a deeper understanding of the current crisis and is an important resource for all students and scholars of IPE, European political economy and European politics.

Unobserved Components and Time Series Econometrics Siem Jan Koopman,Neil Shephard.2015 This volume presents original and up-to-date studies in unobserved components (UC) time series models from both theoretical and methodological perspectives. It also presents empirical studies where the UC time series methodology is adopted. Drawing on the intellectual influence of Andrew Harvey, the work covers three main topics: the theory and methodology for unobserved components time series models; applications of unobserved components time series models; and time series econometrics and estimation and testing. These types of time series models have seen wide application in economics, statistics, finance, climate change, engineering, biostatistics, and sports statistics. The volume effectively provides a key review into relevant research directions for UC time series econometrics and will be of interest to econometricians, time series statisticians, and practitioners (government, central banks, business) in time series analysis and forecasting, as well to researchers and graduate students in statistics, econometrics, and engineering.

NBER Macroeconomics Annual 2014 Jonathan A. Parker,Michael Woodford.2015-06-02 The twenty-ninth edition of the NBER Macroeconomics Annual continues its tradition of featuring theoretical and empirical research on central issues in contemporary macroeconomics. Two papers in this year's issue deal with recent economic performance: one analyzes the evolution of aggregate productivity before, during, and after the Great Recession, and the other characterizes the factors that have contributed to slow economic growth following the Great Recession. Another pair of papers tackles the role of information in business cycles. Other contributions address how assumptions about sluggish nominal price adjustment affect the consequences of different monetary policy rules and the role of business cycles in the long-run decline in the share of employment in

middle-wage jobs. The final chapter discusses the advantages and disadvantages of the elimination of physical currency.
