Martin Heidegger Karsten Harries, Christoph Jamme. 1994-01-01

This volume has its origins in the colloquium 'Art, Politics, Technology -- Martin Heidegger 1889-1989' held at Yale University in 1989. The centenary provided the obvious occasion: regardless of whether deplored or welcomed, the far-reaching influence of Heidegger today is beyond question, an influence underscored in that centenary year by the literally scores of conferences that took place all over the world.

The Economics of Ecosystems and Biodiversity: Ecological and

Economic Foundations Pushpam Kumar. 2012-12-20 Human well-being relies critically on ecosystem services provided by nature.

Examples include water and air quality regulation, nutrient cycling and decomposition, plant pollination and flood control, all of which are dependent on biodiversity. They are predominantly public goods with limited or no markets and do not command any price in the conventional economic system, so their loss is often not detected and continues unaddressed and unabated. This in turn not only impacts human well-being, but also seriously undermines the sustainability of the economic system. It is against this background that TEEB: The Economics of Ecosystems and Biodiversity project was set up in 2007 and led by the United Nations Environment Programme to provide a comprehensive global assessment of economic aspects of these issues. This book, written by a team of international experts, represents the scientific state of the art, providing a comprehensive assessment of the fundamental ecological and economic principles of measuring and valuing ecosystem services and biodiversity, and showing how these can be mainstreamed into public policies. This

volume and subsequent TEEB outputs will provide the authoritative knowledge and guidance to drive forward the biodiversity conservation agenda for the next decade.

German Military Abbreviations .1943 Perhaps to a greater extent than any other army, the German Armed Forces employ military abbreviations on their maps and charts, on task force tables of organization, on direction and location sign posts in combat zones, on field orders, and, in short, in every case where abbreviations may possibly be used. These abbreviations are often used in connection with military symbols (see *German Military Symbols*, January 1943, Military Intelligence Service). A thorough knowledge of both abbreviations and symbols is therefore essential to military personnel engaged in the interpretation of captured documents.--Page 1.

Canvases and Careers Harrison C. White, Cynthia A.

White. 1993-03 In the nineteenth century, the Académie des Beaux Arts, and institution of central importance to the artistic life of France for over two hundred years, yielded much of its

power to the present system of art distribution, which is dependent upon critics, dealers, and small exhibitions. In *Canvases and Careers*, Harrison and Cynthia White examine in scrupulous and fascinating detail how and why this shift occurred. Assimilating a wide range of historical and sociological data, the authors argue convincingly that the Academy, by neglecting to address the social and economic conditions of its time, undermined its own ability to maintain authority and control. Originally published in 1965, this ground-breaking work is a classic piece of empirical research in the sociology of art. In this edition, Harrison C. White's new Foreword compares the marketing approaches of two contemporary painters, while Cynthia A. White's new Afterword reviews recent scholarship in the field.

Smart Governance Helmut Willke.2007 Offers a different perspective on global governance from the vantage point of a global knowledge society. Employing a case study of the global financial system and an analysis of several governance regimes, this work contends that markets, legal systems, and morality must evolve to cope with uncertainty, build capacities, and achieve resilience.

Corporate Creativity Sam Stern.1997 A company's creativity is the source of new ideas that lead to everything from the tiniest improvements to dramatic innovations. Most companies are only too aware that their creative performance falls far short of potential. The problem is that they don't know what to do about it. Evidence shows that most creative acts are not planned for, and come from where they are least expected. It is impossible to predict what they will be, who will be involved, and when and how they will happen. This is the true nature of corporate creativity, and it is where a company's creative potential really.

Autonomous Driving Markus Maurer, J. Christian

Gerdes, Barbara Lenz, Hermann Winner. 2016-05-21 This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving."

Strategic Human Rights Litigation Helen Duffy. 2018-09-06

Strategic human rights litigation (SHRL) is a growing area of international practice yet one that remains relatively under-explored. Around the globe, advocates increasingly resort to national, regional and international courts and bodies

'strategically' to protect and advance human rights. This book provides a framework for understanding SHRL and its contribution to various forms of personal, legal, social, political and cultural change, as well as the many tensions and challenges it gives rise to. It suggests a reframing of how we view the impact of SHRL in its multiple dimensions, both positive and negative. Five detailed case studies, drawn predominantly from the author's own experience, explore litigation in a broad range of contexts (genocide in Guatemala; slavery in Niger; forced disappearance in Argentina; torture and detention in the 'war on terror'; and Palestinian land rights) to reveal the complexity of the role of SHRL in the real world. Ultimately, this book considers how impact analysis might influence the development of more effective litigation strategies in the future.

The book covers these front-end devices as well as their operating systems and the back-end infrastructure which integrate these pervasive components into a seamless IT world. A strong emphasis is placed on the underlying technologies and standards applied when building up pervasive solutions. These fundamental topics include commonly used terms such as XML, WAP, UMTS, GPRS, Bluetooth, Jini, transcoding, and cryptography, to mention just a few. Besides a comprehensive state-of-the-art description of the Pervasive Computing technology itself, this book gives an overview of today's real-life applications and accompanying service offerings.

M-Commerce, e-Business, networked home, travel, and finance are exciting examples of applied Pervasive Computing.

Model-Driven Software Development Markus Völter, Thomas Stahl, Jorn Bettin, Arno Haase, Simon Helsen. 2013-06-26 Model-Driven Software Development (MDSO) is currently a highly regarded development paradigm among developers and researchers. With the advent of OMG's MDA and Microsoft's Software Factories, the MDSO approach has moved to the centre of the programmer's attention, becoming the focus of conferences such as OOPSLA, JAOO and OOP. MDSO is about using domain-specific languages to create models that express application structure or behaviour in an efficient and domain-specific way. These models are subsequently transformed into executable code by a sequence of model transformations. This practical guide for software architects and developers is peppered with practical examples and extensive case studies. International experts deliver:

- * A comprehensive overview of MDSO and how it relates to industry standards such as MDA and Software Factories.
- * Technical details on meta modeling, DSL construction, model-to-model and model-to-code transformations, and software architecture.
- * Invaluable insight into the software development process, plus engineering issues such as versioning, testing and product line engineering.
- * Essential management knowledge covering economic and organizational topics, from a global perspective.

Factory Planning Manual Michael Schenk, Siegfried Wirth, Egon Müller. 2009-10-29 The central purpose of this book is to impart knowledge, skills and practical - plementation methods for the planning and operation of adaptable production - cilities and factories. It addresses planning methods and procedures for various types of production facility up to and including entire factories, and is aimed at practicing factory planners and students alike. The book provides facts and demonstrates

practical processes using case studies for the purposes of illustration, so that ultimately skills can be acquired that make independent practical implementation and application possible. It is based on up-to-the-minute practical experience and universally applicable knowledge of the planning and technological design of adaptable production facilities (manufacturing and assembly) and factories. In comparison to existing, thematically-similar reference books, what is innovative about this manual is that it provides the impulse for a more flexible planning approach for the efficient design of adaptable production facilities using responsive, unconventional planning and organizational solutions. The book aims to provide a way of integrating systematic and situation-driven planning methods in a meaningful way. Situation-driven planning is becoming increasingly important to production facilities in these fast-moving times of change, in particular in terms of resource and energy efficiency. Existing technical and organizational course of action in terms of resources (both human and technical) need to be selected for the specific case at hand, and changes (to workshops, products, processes and equipment) need to be managed.

Non-Visitor Research Martin Tröndle.2022-09-23 Although many studies are available on visitors to cultural institutions, the infrequent or non-visitors are largely unexplored. However, they make up the majority of the population. Their motivation for not visiting is therefore the focus of this volume. This volume provides an in-depth overview of the international state of

nonvisitor research. Building on this, extensive quantitative and qualitative analyses are conducted on reasons for non-visitation. This is followed by an empirically based, practice-oriented theory of visitor attraction. The authors thus present the first comprehensive work on non-visitor research in Germany. This book is a translation of the original German 1st edition Nicht-Besucherforschung by Martin Tröndle, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature in 2019. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

Art, Origins, Otherness William Desmond. 2012-02-01 Though our time is often said to be post-religious and post-metaphysical, many continue to seek some encounter with otherness and transcendence in art. This book deals diversely with the issues of art, origins, and otherness, both in themselves and in philosophical engagements with the works of Plato, Kant, Hegel, Schopenhauer, Nietzsche, and Heidegger. Addressing themes such as eros and mania, genius and the sublime, transcendence and the saving power of art, William Desmond tries to make sense of the paradox that too much has been asked of art that now almost nothing is asked of it. He argues that there is more to be said philosophically of art, and claims that art has the power to open up mindfulness beyond objectifying knowledge, as well as

beyond thinking that claims to be entirely self-determining.

The Just City Susan S. Fainstein.2011-05-16 For much of the twentieth century improvement in the situation of disadvantaged communities was a focus for urban planning and policy. Yet over the past three decades the ideological triumph of neoliberalism has caused the allocation of spatial, political, economic, and financial resources to favor economic growth at the expense of wider social benefits. Susan Fainstein's concept of the just city encourages planners and policymakers to embrace a different approach to urban development. Her objective is to combine progressive city planners' earlier focus on equity and material well-being with considerations of diversity and participation so as to foster a better quality of urban life within the context of a global capitalist political economy. Fainstein applies theoretical concepts about justice developed by contemporary philosophers to the concrete problems faced by urban planners and policymakers and argues that, despite structural obstacles, meaningful reform can be achieved at the local level. In the first half of *The Just City*, Fainstein draws on the work of John Rawls, Martha Nussbaum, Iris Marion Young, Nancy Fraser, and others to develop an approach to justice relevant to twenty-first-century cities, one that incorporates three central concepts: diversity, democracy, and equity. In the book's second half, Fainstein tests her ideas through case studies of New York, London, and Amsterdam by evaluating their postwar programs for housing and development in relation to the three norms. She concludes by identifying a set of specific criteria for urban planners and policymakers to consider when developing programs to assure greater justice in both the process of their formulation and their effects.
