Educational Research and Schooling in Rural Europe Cath Gristy,Linda Hargreaves,Silvie R. Kuřerová.2020-07-01 This book provides authentic accounts of the effects of the revolutionary political reform experienced in the past half century on education in Europe's considerable rural hinterland. These reforms include the liberation of the Baltic and Eastern European states from Soviet communist domination, the 'eurozone' economic crises, and the current and future migration of people fleeing war and poverty from the Middle East and Africa. Overshadowing these events are so-called global forces which champion economies of scale and pressurize academic performance as keys to economic success. Trapped in this distal whirlwind of change are 1000s of small and/or rural elementary schools and the life chances of more 1000s of young children. The research presented here unveils the unseen and under-reported consequences of top-down, urban-oriented educational policies on children's and communities' experience of place and space. Exposure of these conditions in rural Europe is long overdue, but obscured for decades by political extremes of left and right. Yet, the lived reality of peremptory and swathing school closure programmes, and poverty inflicted on rural populations in parts of Eastern Europe is relatively unreported in the western educational literature - a situation exacerbated by the virtual invisibility of rural educational research generally. The chapters in this book reveal the insights of social science scholars from 11 European countries including those from low GDP, formerly soviet bloc countries, recently enabled to present their research at western European conferences such as the European Educational Research Association. Their research will inform and alert education academics, researchers and professionals to these rural European educational contexts. The research methodologies reported are diverse and innovative. The national context chapters are complemented by overview chapters which survey and synthesise (i) definitions and conceptualisations of rural, (ii) pan-European appraisal of educational, structural and geospatial statistics on small and rural schools, and (iii) identify key messages for better understanding of the rural situation in European research, policy and practice. Crucially, despite the gloom, the authors report positive strategies for rural school survival at governmental and/or school and community levels, that include community involvement, rural educational tourism, and deliberative inter-community school network planning.

**Preparing Teachers** National Research Council,Division of Behavioral and Social Sciences and Education,Center for Education,Committee on the Study of Teacher Preparation Programs in the United States.2010-07-25 Teachers make a difference. The success of any plan for improving educational outcomes depends on the teachers who carry it out and thus on the abilities of those attracted to the field and their preparation. Yet there are many questions about how teachers are being prepared and how they ought to be prepared. Yet, teacher preparation is often treated as an afterthought in discussions of improving the public education system. Preparing Teachers addresses the issue of teacher preparation with specific attention to reading, mathematics, and science. The book evaluates the characteristics of the candidates who enter teacher preparation programs, the sorts of instruction and experiences teacher candidates receive in preparation programs, and the extent that the required instruction and experiences are consistent with converging scientific evidence. Preparing Teachers also identifies a need for a data collection model to provide valid and reliable information about the content knowledge, pedagogical competence, and effectiveness of graduates from the various kinds of teacher preparation programs. Federal and state policy makers need reliable, outcomes-based information to make sound decisions, and teacher educators need to know how best to contribute to the development of effective teachers. Clearer understanding of the content and character of effective teacher preparation is critical to improving it and to ensuring that the same critiques and questions are not being repeated 10 years from now.

Foster Care and Best Interests of the Child Sarah A. Font,Elizabeth T. Gershoff.2020-03-09 This brief examines the U.S. foster care system and seeks to explain why the foster care system functions as it does and how it can be improved to serve the best interest of children. It defines and evaluates key challenges that undermine child safety and well-being in the current foster care system. Chapters highlight the competing values and priorities of the system as well as the pros and cons for the use of foster care. In addition, chapters assess whether the performance objectives in which states are evaluated by the federal government are sufficient to achieve positive health and well-being outcomes for children who experience foster care. Finally, it offers recommendations for improving the system and maximizing positive outcomes. Topics featured in this brief include: Legal aspects of removal and placement of children in foster care. The effectiveness of prior efforts to reform foster care. The regulation and quality of foster homes. Support for youth aging out of the foster care system. Racial and ethnic disparities in the foster care system. Foster Care and the Best Interests of the Child is a must-have resource for policy makers and related professionals, graduate students, and researchers in child and school psychology, family studies, public health, social work, law/criminal justice, and sociology.

**Student Voice in School Reform** Dana L. Mitra.2014-03-14 High schools continue to be places that isolate, alienate, and disengage students. But what would happen if students were viewed as part of the solution in schools rather than part of the problem? This book examines the emergence of student voice at one high school in the San Francisco Bay area where educators went straight to the source and asked the students to help. Struggling, like many high schools, with how to improve student outcomes, educators at Whitman High School decided to invite students to participate in the reform process. Dana L. Mitra describes the evolution of student voice at Whitman, showing that the students enthusiastically created partnerships with teachers and administrators, engaged in meaningful discussion about why so many failed or dropped out, and partnered with teachers and principals to improve learning for themselves and their peers. In documenting the difference that student voice made, this book helps expand ideas of distributed leadership, professional learning communities, and collaboration. The book also contributes much needed research on what student voice initiatives look like in practice and provides powerful evidence of ways in which young people can increase their sense of agency and their sense of belonging in school.

**Web Style Guide** Patrick J. Lynch,Sarah Horton.2002 This book demonstrates the step-by-step process involved in designing a Web site. Readers are assumed to be familiar with whatever Web publishing tool they are using. The guide gives few technical details but instead focuses on the usability, layout, and attractiveness of a Web site, with the goal being to make it as popular with the intended audience as possible. Considerations such as graphics, typography, and multimedia enhancements are discussed.

*Science of Science and Innovation Policy* National Research Council,Division of Behavioral and Social Sciences and Education,Committee on National Statistics,Steering Committee on the Science of Science and Innovation Policy Principal Investigator's Conference.2014-04-02 The National Science Foundation developed the Science of Science and Innovation Policy program (SciSIP) in 2006 to fund basic and applied research that bears on and can help guide public- and private-sector policy making for science and innovation. By design, SciSIP has engaged researchers from many domains in the development of a community of practice who work together to continually develop frameworks, tools, and datasets for implementing science and innovation policy. Since its inception, the SciSIP program has funded more than 150 researchers and their graduate students. The program also contributed to the initiation of the STAR METRICS (Science and Technology for America's Reinvestment: Measuring the Effect of Research on Innovation, Competitiveness and Science) program, a collaborative effort between the National Science Foundation and the National Institutes of Health. The STAR METRICS program develops tools and mechanisms for measuring federal expenditures on scientific activities, with particular focus on quantifying productivity and employment outcomes. Science of Science and Innovation Policy summarizes a public conference convened by the Committee on National Statistics of the National Academy of Sciences/National Research Council to present research funded by SciSIP and foster intellectual exchange among funded researchers, science, technology, and innovation policy practitioners, and other members of the science community. The conference highlighted advances in the emerging field of the science of science and innovation policy, in particular, models, frameworks, tools, and datasets comprising the evidentiary basis for science and innovation policy. This report focuses on return on investment models; organizational structures that foster accelerated scientific productivity; linkages between commercialized scientific knowledge and job creation; the roles of universities and government in technology transfer and innovation; technology diffusion and economic growth; non-economic impacts of science and innovation expenditures; regional and global networks of knowledge generation and innovation; mechanisms for encouraging creativity and measuring outputs and outcomes from transformative research; and development, manipulation and visualization of data representing scientific activities.

*Core Entrustable Professional Activities for Entering Residency* Association of American Medical Colleges.2014-05-28 This landmark publication published by the AAMC identifies a list of integrated activities to be expected of all M.D. graduates making the transition from medical school to residency. This guide delineates 13 Entrustable Professional Activities (EPAs) that all entering residents should be expected to perform on day 1 of residency without direct supervision regardless of specialty choice.The Core EPAs for Entering Residency are designed to be a subset of all of the graduation requirements of a medical school. Individual schools may have additional mission-specific graduation requirements, and specialties may have specific EPAs that would be required after the student has made the specialty decision but before residency matriculation. The Core EPAs may also be foundational to an EPA for any practicing physician or for specialty-specific EPAs.Update: In August 2014, the AAMC selected ten institutions to join a five-year pilot to test the implementation of the Core Entrustable Professional Activities (EPAs) for Entering Residency. More than 70 institutions, representing over half of the medical schools accredited by the U.S. Liaison Committee on Medical Education (LCME), applied to join the pilot, demonstrating the significant energy and enthusiasm towards closing the gap between expectations and performance for residents on day one. The cohort reflects the breadth and diversity of the applicant pool, and the institutions selected are intended to complement each other through the unique qualities and skills that each team and institution brings to the pilot.Faculty and Learners' Guide (69 pages) - Developing faculty: The EPA descriptions, the expected behaviors, and the vignettes are expected to serve as the foundation for faculty development. Faculty can use this guide as a reference for both feedback and assessment in pre-clinical and clinical settings.- Developing learners: Learners can also use this document to understand the core of what is expected of them by the time they graduate. The EPA descriptions themselves delineate the expectations, while the developmental progression laid out from pre-entrustable to entrustable behaviors can serve as the roadmap for achieving them.

**ALA Glossary of Library and Information Science, Fourth Edition** Michael Levine-Clark,Toni M. Carter.2013 The only things librarians seem to encounter more often than acronyms are strings of jargon and arcane technical phrases—and there are so many floating around that even just reading an article in a professional journal can bewilder experienced librarians, to say nothing of those new to the profession! Featuring thousands of revised and brand new entries, the fourth edition of ALA Glossary of Library and Information Science presents a thorough yet concise guide to the specific words that describe the materials, processes and systems relevant to the field of librarianship. A panel of experts from across the LIS world have thoroughly updated the glossary to include the latest technology- and internet-related terms, covering metadata, licensing, electronic resources, instruction, assessment, readers' advisory, and electronic workflow. This book will become an essential part of every library's and librarian's reference collection and will also be a blessing for LIS students and recent graduates.

**Scientific Research in Education** National Research Council,Division of Behavioral and Social Sciences and Education,Center for Education,Committee on Scientific Principles for Education Research.2002-03-28 Researchers, historians, and philosophers of science have debated the nature of scientific research in education for more than 100 years. Recent enthusiasm for evidence-based policy and practice in education—now codified in the federal law that authorizes the bulk of elementary and secondary education programs—have brought a new sense of urgency to understanding the ways in which the basic tenets of science manifest in the study of teaching, learning, and schooling. Scientific Research in Education describes the similarities and differences between scientific inquiry in education and scientific inquiry in other fields and disciplines and provides a number of examples to illustrate these ideas. Its main argument is that all scientific endeavors share a common set of principles, and that each field—including education research—develops a specialization that accounts for the particulars of what is being studied. The book also provides suggestions for how the federal government can best support high-quality scientific research in education.

Child Maltreatment Research, Policy, and Practice for the Next Decade National Research Council,Division of Behavioral and Social Sciences and

Education, Institute of Medicine, Board on Children, Youth, and Families. 2012-07-15 In 1993 the National Research Council released its landmark report *Understanding Child Abuse and Neglect* (NRC, 1993). That report identified child maltreatment as a devastating social problem in American society. Nearly 20 years later, on January 30-31, 2012, the Institute of Medicine (IOM) and NRC's Board on Children, Youth and Families help a workshop, *Child Maltreatment Research, Policy, and Practice for the Next Generation*, to review the accomplishments of the past two decades of research related to child maltreatment and the remaining gaps. There have been many exciting research discoveries since the '93 report, but we also want people to be thinking about what is missing, said Anne Petersen, research professor at the Center for Human Growth and Development at the University of Michigan and chair of the panel that produced the report. *Child Maltreatment Research, Policy, and Practice for the Next Decade: Workshop Summary* covers the workshop that brought together many leading U.S. child maltreatment researchers for a day and a half of presentations and discussions. Presenters reviewed research accomplishments, identified gaps that remain in knowledge, and consider potential research priorities. *Child Maltreatment Research, Policy, and Practice for the Next Decade: Workshop Summary* also covers participant suggestions for future research priorities, policy actions, and practices that would enhance understanding of child maltreatment and efforts to reduce and respond to it. A background paper highlighting major research advances since the publication of the 1993 NRC report was prepared by an independent consultant to inform the workshop discussions. This summary is an essential resource for any workshop attendees, policy makers, researchers, educators, healthcare providers, parents, and advocacy groups.

Silbereisen, Jeanne Brooks-Gunn. 2013-08-15 *The Developmental Science of Adolescence: History Through Autobiography* is the most authoritative account of the leading developmental scientists from around the world. Written by the scholars who shaped the history they are recounting, each chapter is an engaging and personal account of the past, present, and future direction of the field. No other reference work has this degree of authenticity in presenting the best developmental science of adolescence. The book includes a Foreword by Saths Cooper, President of the International Union of Psychological Science and autobiographical chapters by the following leading developmental scientists: Jeffrey Jensen Arnett, Robert Wm. Blum, Jeanne Brooks-Gunn, B. Bradford Brown, Marlis Buchmann, John Bynner, John Coleman, Rand D. Conger, James E. Côté, William Damon, Sanford M. Dornbusch, Nancy Eisenberg, Glen H. **International Higher Education's Scholar-Practitioners** Bernhard Streitwieser, Anthony C. Ogden. 2016-03-01 The idea of the professional who bridges both research and practice has been largely overlooked and at times even disregarded by the academic and administrative structures that govern activity in higher education today. In international higher education, the number of students who now engage in mobility and exchange has expanded globally, along with the administrative cadre that manages all facets of internationalization, and the quickly growing scholarly attention to understanding the phenomenon. In this process, two distinct professional categories have emerged: those who 'study it' and those who 'do it' - the scholars and the practitioners. Practitioners are seen as those who manage the daily logistical flow of students and personnel around the globe, while scholars are seen as those who conduct research, collect and analyze data, and publish findings to inform, improve, and justify the activity. Yet this dichotomy is overly simplistic, outdated, and excludes the large and growing class of hybrid scholar-practitioners who now engage regularly in both kinds of activity. It is this rapidly growing population of bridge builders that are profiled and discussed in this book through critical essays on the notion of the scholar-practitioner and its implication for the further development of international higher education. The chapters include detailed analyses from university faculty, senior international officers and other high-level administrators, directors of research centers, key leaders from influential professional associations and private organizations, managers of study abroad and exchange, and graduate students. This book launches a much-needed dialogue about the perception and reality, potential and promise, of the scholar-practitioner in higher education today. It will be of relevance to a wide variety of readers, from those within universities and organizations to those who are outside observers of higher education.

**The Changing Frontier** Adam B. Jaffe, Benjamin F. Jones. 2015-08-14 In 1945, Vannevar Bush, founder of Raytheon and one-time engineering dean at MIT, delivered a report to the president of the United States that argued for the importance of public support for science, and the importance of science for the future of the nation. The report, *Science: The Endless Frontier*, set America on a path toward strong and well-funded institutions of science, creating an intellectual architecture that still defines scientific endeavor today. In *The Changing Frontier*, Adam B. Jaffe and Benjamin Jones bring together a group of prominent scholars to consider the changes in science and innovation in the ensuing decades. The contributors take on such topics as changes in the organization of scientific research, the geography of innovation, modes of entrepreneurship, and the structure of research institutions and linkages between science and innovation. An important analysis of where science stands today, *The Changing Frontier* will be invaluable to practitioners and policy makers alike.

**Science Communication** Annette Leßmöllmann, Marcelo Dascal, Thomas Gloning. 2019-12-16 Science is an essentially cooperative, critical, and dynamic enterprise. Were it not for the continuous creation and improvement of special forms of communication, argumentation, and innovation, all of them suitable for its three key features, scientific knowledge and progress could hardly be achieved. The aim of this volume is to explore the nature of science communication in its several functions, modalities, combinations, and evolution - past, present, and future. One of our objectives is to provide an overview of the richness and variety of elements that take part in performing the complex tasks and fulfilling the functions of science communication. The overall structure and criteria for the choice of topics: 1. The origin and target of a communication episode - its source(s) and addressee(s). 2. The media of communication employed. 3. The thematic field and content types. 4. The distinction between aspects of science communication (e.g., media, texttypes, domains, communicative maxims) and aspects of research on science communication (e.g., the contribution of different research traditions to the understanding of science communication). 5. The history and dynamics of science communication (past, present, and future), both in an empirical perspective (e.g., the development of the research article) and a systematic perspective (e.g., what are basic types and mechanisms of change in science communication).

**Digital Lifeline?** Carleen Maitland. 2018-05-04 Interdisciplinary perspectives on the role of new information technologies, including mobile phones, wireless networks, and biometric identification, in the global refugee crisis. Today's global refugee crisis has mobilized humanitarian efforts to help those fleeing persecution and armed conflict at all stages of their journey. Aid organizations are increasingly employing new information technologies

in their mission, taking advantage of proliferating mobile phones, remote sensors, wireless networks, and biometric identification systems. *Digital Lifeline?* examines the use of these technological innovations by the humanitarian community, exploring operations and systems that range from forecasting refugee flows to providing cellular and Internet connectivity to displaced persons. The contributors, from disciplines as diverse as international law and computer science, offer a variety of perspectives on forced migration, technical development, and user behavior, drawing on field work in countries including Jordan, Lebanon, Rwanda, Germany, Greece, the United States, and Canada. The chapters consider such topics as the use of information technology in refugee status determination; ethical and legal issues surrounding biometric technologies; information technology within organizational hierarchies; the use of technology by refugees; access issues in refugee camps; the scalability and sustainability of information technology innovations in humanitarian work; geographic information systems and spatial thinking; and the use of “big data” analytic techniques. Finally, the book identifies policy research directions, develops a unified research agenda, and offers practical suggestions for conducting displacement research. *Oer* Andrew Wesolek, Anne Langley, Jonathan Lashley. 2018-10 For many of us, the drive to affect positive change—however vague or idiosyncratic our sense of this might be—has guided our work in higher education. We champion the pursuit of a college degree because few endeavors can match it in terms of advancing a person's economic mobility (Chetty, Friedman, Saez, Turner, and Yagan; 2017). Despite recent debates about the value of a college degree (Pew Research Center, 2017), the opportunities and financial stability awarded to those with college degrees remain apparent when they are compared to peers who have only graduated high school (Pew Research Center, 2014). And while more Americans have a college degree than ever before (Ryan and Bauman, 2016), access to a formal, post-secondary education continues to be elusive for some. Indeed, over the last ten years, analysts have projected that the cost of attending college would keep 2.4 million low-to-moderate income, college-qualified high school graduates from completing a college degree (Advisory Committee on Student Financial Assistance, 2006). During that same period, college students in the United States saw expenses related to tuition and fees increase by 63 percent, school housing costs (excluding board) increase by 51 percent, textbook prices increase by 88 percent (Bureau of Labor, 2016). Because few students can afford a college education by salary alone, 44.2 million Americans have sought financial aid via student loans. As a result, total student loan debt is now topping \$1.45 trillion in the United States (Board of Governors of the Federal Reserve System, 2017), and student loan delinquency rates are averaging 11.2 percent (Federal Reserve Bank of New York, 2017). The burden of a student's financial decisions extends beyond the mere individual: society will inevitably carry the weight of this debt for years to come.

**Wounded Lions** Ronald A. Smith. 2016-04-15 The Jerry Sandusky child molestation case stunned the nation. As subsequent revelations uncovered an athletic program operating free of oversight, university officials faced criminal charges while unprecedented NCAA sanctions hammered Penn State football and blackened the reputation of coach Joe Paterno. In *Wounded Lions*, acclaimed sport historian and longtime Penn State professor Ronald A. Smith draws from university archives to answer the How? and Why? at the heart of the scandal. The Sandusky case was far from the first example of illegal behavior related to the football program—or the university's attempts to suppress news of it. As Smith shows, decades of infighting among administrators, alumni, trustees, faculty, and coaches established policies intended to protect the university, and the football team considered synonymous with its name, at all costs. If the habits predated Paterno, they also became sanctified during his tenure. Smith names names to show how abuses of power warped the Penn State Way even with hires like women's basketball coach Rene Portland, who allegedly practiced sexual bias against players for decades. Smith also details a system that concealed Sandusky's horrific acts just as deftly as it whitewashed years of rules violations, coaching malfeasance, and player crime while Paterno set records and raised hundreds of millions of dollars for the university.

**Black Love Matters** Armon R. Perry. 2020-10-30 *Black Love Matters* is an in-depth qualitative analysis that focuses on a diverse group of adult black men and their attitudes towards behavior in marriage and romantic relationships. To give voice to the men's narratives, *Black Love Matters* follows the men for four years, chronicling the experiences and the circumstances shaping their relationship trajectories. Highlights include discussions related to the roles that sex, infidelity, intimacy, trauma, family of origin, masculinity, and environmental factors play in the men's attitudes and behaviors. Given the dearth of literature on black men featuring first-hand accounts from them, *Black Love Matters* makes a significant contribution to the existing literature that seems to be disproportionately focused on implicating black men in discussions of what ill their families and communities.

**Early Childhood and Development Work** Anne-Trine Kjørholt, Helen Penn. 2018-08-29 This edited volume provides a critical account of the theories and policies that have informed work in the field of early childhood and explores how they have operated in practice. Underpinning the theoretical debates are the familiar tensions between global norms and local contexts; increasing inequality alongside economic progress, and the increasing prominence of business and the private sector in delivering aid programs. The authors offer a profound critique on an increasingly important topic and discuss alternative models of policy and practice.
