Experiment and Exploration: Forms of World-Disclosure Sönke Ahrens.2014-03-18 This book deals with contemporary epistemological questions, connecting Educational Philosophy with the field of Science- and Technology Studies. It can be understood as a draft of a general theory of world-disclosure, which is in its core a distinction between two forms of world-disclosure: experiment and exploration. These two forms have never been clearly distinguished before. The focus lies on the experimental form of world-disclosure, which is described in detail and in contrast to the explorational form along the line of twenty-one characteristics, which are mainly derived from empirical studies of experimental work in the field of natural sciences. It can also be understood as an attempt to integrate elements of the Anglo-Saxon Philosophy of Science with elements of the German tradition of Educational Philosophy. This is also reflected in the style of writing. In accordance to the content-level of the book, the argument for experimental forms of world-disclosure is written in an essayistic, readable style, which can be understood as an experimental form of writing. This book is a translation of the doctoral thesis 'Experiment und Exploration. Bildung als experimentelle Form der Welterschließung' (summa cum laude). The thesis was published in German in 2010 by Transcript (Bielefeld) in the series called 'Theorie Bilden', edited by Prof. Dr. Hannelore Faulstich-Wieland, Prof. Dr. Hans-Christoph Koller, Prof. Dr. Karl-Josef Pazzini and Prof. Dr. Michael Wimmer.

Modeling Brain Function D. J. Amit, Daniel J. Amit.1989 One of the most exciting and potentially rewarding areas of scientific research is the study of the principles and mechanisms underlying brain function. It is also of great promise to future generations of computers. A growing group of researchers, adapting knowledge and techniques from a wide range of scientific disciplines, have made substantial progress understanding memory, the learning process, and self organization by studying the properties of models of neural networks - idealized systems containing very large numbers of connected neurons, whose interactions give rise to the special qualities of the brain. This book introduces and explains the techniques brought from physics to the study of neural networks and the insights they have stimulated. It is written at a level accessible to the wide range of researchers working on these problems - statistical physicists, biologists, computer scientists, computer technologists and cognitive psychologists. The author presents a coherent and clear nonmechanical presentation of all the basic ideas and results. More technical aspects are restricted, wherever possible, to special sections and appendices in each chapter. The book is suitable as a text for graduate courses in physics, electrical engineering, computer science and biology.

The Romani Women's Movement Angéla Kóczé, Violetta Zentai, Jelena Jovanović, Enikő Vincze.2018-07-17 The lack of recognition of Romani gender politics in the wider Romani movement and the women's movements is accompanied by a scarcity of academic literature on Romani women's mobilization in wider social justice struggles and debates. The Romani Women's Movement highlights the role that Romani women's politics plays in shaping equality related discourses, policies, and movements in Central, Eastern and South-Eastern Europe. Presenting the diverse experiences and voices of Romani women activists, this volume reveals how they translate experiences of structural inequalities into political struggles by defining their own spaces of action; participating in formalized or less formal activist practices, and challenging the agendas and mechanisms of the established Romani and women's movements. Moving discourses on and of Romani women from the periphery of scholarly exchanges to the mainstream, the volume invites scholars and activists from different disciplines and movements to critically reflect on their engagements with particular social justice agendas. It will appeal to students, researchers and practitioners interested in fields such as social movements, gender equality, and social and ethnic justice.

Patterns of Change Ladislav Kvasz.2008-10-28 Kvasz's book is a contribution to the history and philosophy of mathematics, or, as one might say, the historical approach to the philosophy of mathematics. This approach is for mathematics what the history and philosophy of science is for science. Yet the historical approach to the philosophy of science appeared much earlier than the historical approach to the philosophy of mathematics. The first significant work in the history and philosophy of science is perhaps William Whewell's Philosophy of the Inductive Sciences, founded upon their History. This was originally published in 1840, a second, enlarged edition appeared in 1847, and the third edition appeared as three separate works published between 1858 and 1860. Ernst Mach's The Science of Mechanics: A Critical and Historical Account of Its Development is certainly a work of history and philosophy of science. It first appeared in 1883, and had six further editions in Mach's lifetime (1888, 1897, 1901, 1904, 1908, and 1912). Duhem's Aim and Structure of Physical Theory appeared in 1906 and had a second enlarged edition in 1914. So we can say that history and philosophy of science was a well-established field by the end of the 19 and the beginning of the 20 century. By contrast the first significant work in the history and philosophy of mathematics is Lakatos's Proofs and Refutations, which was published as a series of papers in the years 1963 and 1964.

A Wittgenstein Dictionary Hans-Johann Glock.1996-02-05 This lucid and accessible dictionary presents technical terms that Wittgenstein introduced into philosophical debate or transformed substantially, and also topics to which he made a substantial contribution. Hans-Johann Glock places Wittgenstein's ideas in their relevance to current debates. The entries delineate Wittgenstein's lines of argument on particular issues,

assessing their strengths and weaknesses, and shed light on fundamental exegetical controversies. The dictionary entries are prefaced by a 'Sketch of an Intellectual Biography', which links the basic themes of the early and later philosophy and describes the general development of Wittgenstein's thinking. Extensive textual references, a detailed index and an annotated bibliography will facilitate further study. Authoritative, comprehensive and clear, the volume will be welcomed by anyone with an interest in Wittgenstein - his life, work or influence. Each Blackwell Philosopher Dictionary presents the life and work of an individual philosopher in a scholarly but accessible manner. Entries cover key ideas and thoughts, as well as the main themes of the philosopher's works. A comprehensive biographical sketch is also included.

Patterns of Commoning David Bollier, Silke Helfrich.2015-11-06 What accounts for the persistence and spread of commoning, the irrepressible desire of people to collaborate and share to meet everyday needs? How are the more successful projects governed? And why are so many people embracing the commons as a powerful strategy for building a fair, humane and Earth-respecting social order? In more than fifty original essays, *Patterns of Commoning* addresses these questions and probes the inner complexities of this timeless social paradigm. The book surveys some of the most notable, inspiring commons around the world, from alternative currencies and open design and manufacturing, to centuries-old community forests and co-learning commons - and dozens of others. David Bollier (www.bollier.org) is an American author, activist and independent scholar who has studied the commons for nearly twenty years. Silke Helfrich (commonsblog.wordpress.com) is a German author and independent activist of the commons who blogs at www.commonsblog.de, and cofounder of the Commons-Institut in Germany. With Michel Bauwens, Bollier and Helfrich are cofounders of the Common Strategies Group. For more information, go to the book's website, *Patterns of Commoning* (www.patternsofcommoning.org)

Gender, Science and Mathematics L. H. Parker, L. Rennie, B. Fraser.1995-12-31 Throughout the Western world, the relationship between gender, science and mathematics has emerged as critical in a variety of contexts. In tertiary institutions, the study of gender issues, frequently with reference to science and mathematics, is of central significance to many disciplines. Gender studies are being offered as separate courses or parts of existing courses in preservice and postgraduate teacher education, women's studies, technology studies and policy studies. In addition, in the broader context of education at all levels from primary/elementary through to higher, concerned policy-makers and practitioners frequently focus on the interaction of gender, science and mathematics in their attempts to reform and improve education for all students. In all of these contexts, there is an urgent need for suitable texts, both to provide resources for teachers and students and to inform policy-makers and practitioners. This book has been developed specifically to meet this need. It is designed to be used throughout the world in a variety of tertiary courses and by policy-makers concerned with activities which interface with the gender/science/mathematics relationship. It provides examples which illustrate vividly the rich field from which practitioners and policy-makers in this area now can draw. Its particular appeal will stem from its practical approach and creative future perspective, the international renown of the authors and the generalisability of the recent research and thinking presented in each of the chapters.

Cognitive Activation in the Mathematics Classroom and Professional Competence of Teachers Mareike Kunter, Jürgen Baumert, Werner Blum, Ute Klusmann, Stefan Krauss, Michael Neubrand.2013-03-29 This work reports the findings of the Professional Competence of Teachers, Cognitively Activating Instruction, and Development of Students' Mathematical Literacy project (COACTIV). COACTIV applies a broad, innovative conceptualization of teacher competence to examine how mathematics teachers' knowledge, beliefs, motivational orientations, and self-regulation skills influence their instructional practice and teaching outcomes. In this project data was collected on various aspects of teacher competence and classroom instruction from the perspective of both the teachers themselves and their students. Moreover, it gauges the effects of these teacher characteristics on student learning, as indexed by the progress students in each class. Questions addressed in the study which are reported in this volume include: What are the characteristics of successful teaching? What distinguishes teachers who succeed in their profession? How can the quality of instruction be improved?

Innovation in Organizations Michael West, Wieby M. Altink.1996 Two factors have focused the attention of policy-makers, researchers and senior managers upon the importance of innovation. First, the increasingly competitive global organizational environment requires that new and improved products, processes and procedures are constantly developed. Secondly, there is widespread recognition that we must use our limited resources in the most efficient and effective way possible.; This special issue focuses on innovation in organizations, in recognition of the primary strategic value of innovation in a rapidly-changing European and global market-place. Psychological perspectives on innovation are particularly important, since innovation ultimately is about human behaviour.; In this book, contributors discuss the factors which contribute to individual innovation at work - people introducing new and improved role objectives, work processes and strategies. They also examine factors influencing team-level innovation, an important area of research in the drive to understand how employees can become involved, committed and empowered within organizations. The contributors examine factors associated with organizational innovation, an area where there is still much prescription but little empirical evidence. Finally, there is an examination of the socio-cultural factors affecting innovation.; All the contributors adopt a psychological perspective, arguing that it is psychological factors which influence people to develop and introduce new and improved products, processes and procedures in their workplaces. The contributors, who are drawn from a number of European countries, exemplify the axiom that heterogeneity is associated with innovation. The contents of this book themselves reflect innovative orientations to understanding innovation in organizations. Of particular significance is that this book includes contributions from both researchers and practitioners and reveals both the overlaps in their conceptions of innovation at work as well as the areas of disagreement and discrepancy.

Geschichte erzählen. Strategien der Narrativierung von Vergangenheit im Mittelalter Sarah Bowden, Manfred Eikelmann, Stephen Mossman, Michael Stolz.2020-11-23 Die Beiträge dieses Bandes gehen auf eine internationale Tagung zurück, die 2017 in Manchester stattgefunden hat. Sie untersuchen die Darstellung von Geschichte in der mittelalterlichen deutschen Literatur auf der Basis von aktuellen erzähltheoretischen Forschungsansätzen. Dabei wird ein breites Spektrum an Texten, Gattungen und Diskursen in den Blick genommen; als Angelpunkt für zahlreiche relevante Fragestellungen erweist sich die im 12. Jahrhundert entstandene ›Kaiserchronik‹. Geleitet von der Erkenntnis, dass Vergangenheit erst im Erzählen zu Geschichte wird, analysieren die Beiträge einschlägige narrative Strategien.

Agile Software Engineering Orit Hazzan, Yael Dubinsky. 2009-02-28 Overview and Goals The agile approach for software development has been applied more and more extensively since the mid nineties of the 20th century. Though there are only about ten years of accumulated experience using the agile approach, it is currently conceived as one of the mainstream approaches for software development. This book presents a complete software engineering course from the agile angle. Our intention is to present the agile approach in a holistic and comprehensive learning environment that fits both industry and academia and inspires the spirit of agile software development. Agile software engineering is reviewed in this book through the following three perspectives: 1 The Human perspective, which includes cognitive and social aspects, and refers to learning and interpersonal processes between teammates, customers, and management. 1 The Organizational perspective, which includes managerial and cultural aspects, and refers to software project management and control. 1 The Technological perspective, which includes practical and technical aspects, and refers to design, testing, and coding, as well as to integration, delivery, and maintenance of software products. Specifically, we explain and analyze how the explicit attention that agile software development gives these perspectives and their interconnections, helps viii Preface it cope with the challenges of software projects. This multifaceted perspective on software development processes is reflected in this book, among other ways, by the chapter titles, which specify dimensions of software development projects such as quality, time, abstraction, and management, rather than specific project stages, phases, or practices.

International Handbook of Mathematics Education Alan J. Bishop. 1996 This Handbook presents an overview and analysis of the international 'state-of-the-field' of mathematics education at the end of the 20th century. The more than 150 authors, editors and chapter reviewers involved in its production come from a range of countries and cultures. They have created a book of 36 original chapters in four sections, surveying the variety of practices, and the range of disciplinary interconnections, which characterise the field today, and providing perspectives on the study of mathematics education for the 21st century. It is first and foremost a reference work, and will appeal to anyone seeking up-to-date knowledge about the main developments in mathematics education. These will include teachers, student teachers and student researchers starting out on a serious study of the subject, as well as experienced researchers, teacher educators, educational policy-makers and curriculum developers who need to be aware of the latest areas of knowledge development.

Inventing Europe G. Delanty. 1995-04-19 A critical analysis of the idea of Europe and the limits and possibilities of a European identity in the broader perspective of history. This book argues that the crucial issue is the articulation of a new identity that is based on post-national citizenship rather than ambivalent notions of unity.

The Math Gene Keith Devlin. 2001-05-17 Why is math so hard? And why, despite this difficulty, are some people so good at it? If there's some inborn capacity for mathematical thinking—which there must be, otherwise no one could do it—why can't we all do it well? Keith Devlin has answers to all these difficult questions, and in giving them shows us how mathematical ability evolved, why it's a part of language ability, and how we can make better use of this innate talent. He also offers a breathtakingly new theory of language development—that language evolved in two stages, and its main purpose was not communication—to show that the ability to think mathematically arose out of the same symbol-manipulating ability that was so crucial to the emergence of true language. Why, then, can't we do math as well as we can speak? The answer, says Devlin, is that we can and do—we just don't recognize when we're using mathematical reasoning.

Living Labs David V. Keyson, Olivia Guerra-Santin, Dan Lockton. 2016-09-28 This book presents the results of a multi-annual project with sustainable Living Labs in the United Kingdom, Sweden, Germany and the Netherlands. Living Labs - as initiated by the authors - have proved to be very promising research, design, co-creation and communication facilities for the development and implementation of sustainable innovations in the home. The book provides an inspiring introduction to both the methodology and business modelling for the Living Lab facilities. Understanding daily living at home is key to designing products and services that support households in their transition to more sustainable lifestyles. This book not only explores new ways of gaining insights into daily practices, but also discusses developing and testing design methods to create sustainable solutions for households. These new methods and tools are needed because those available are either ineffective or cause rebound-effects. Intended for researchers and designers with an interest in the transition to sustainable lifestyles, it also appeals to company leaders interested in new ways of developing sustainable innovations and offers suggestions for effectively applying Living Labs for sustainable urban development.

Agile and Lean Concepts for Teaching and Learning David Parsons, Kathryn MacCallum. 2018-10-24 This book explores the application of agile and lean techniques, originally from the field of software development and manufacturing, to various aspects of education. It covers a broad range of topics, including applying agile teaching and learning techniques in the classroom, incorporating lean thinking in educational workflows, and using team-based approaches to student-centred activities based on agile principles and processes. Demonstrating how agile and lean ideas can concretely be applied to education, the book offers practical guidance on how to apply these ideas in the classroom or lecture hall, as well as new concepts that could spark further research and development.

Insurgent Public Space Jeffrey Hou. 2010-04-21 Winner of the EDRA book prize for 2012. In cities around the world, individuals and groups are reclaiming and creating urban sites, temporary spaces and informal gathering places. These 'insurgent public spaces' challenge conventional views of how urban areas are defined and used, and how they can transform the city environment. No longer confined to traditional public areas like neighbourhood parks and public plazas, these guerrilla spaces express the alternative social and spatial relationships in our changing cities. With nearly twenty illustrated case studies, this volume shows how instances of insurgent public space occur across the world. Examples range from community gardening in Seattle and Los Angeles, street dancing in Beijing, to the transformation of parking spaces into temporary parks in San Francisco. Drawing on the experiences and knowledge of individuals extensively engaged in the actual implementation of these spaces, *Insurgent Public Space* is a unique cross-disciplinary approach to the study of public space use, and how it is utilized in the contemporary, urban world.

Appealing to professionals and students in both urban studies and more social courses, Hou has brought together valuable commentaries on an area of urbanism which has, up until now, been largely ignored.

New Directions in Assessing Historical Thinking Kadriye Ercikan, Peter Seixas. 2015-02-20 New technologies have radically transformed our relationship to information in general and to little bits of information in particular. The assessment of history learning, which for a century has valued those little bits as the centerpiece of its practice, now faces not only an unprecedented glut but a disconnect with what is valued in history education. More complex processes—historical thinking, historical consciousness or historical sense making—demand more complex assessments. At the same time, advances in scholarship on assessment open up new possibilities. For this volume, Kadriye Ercikan and Peter Seixas have assembled an international array of experts who have, collectively, moved the fields of history education and assessment forward. Their various approaches negotiate the sometimes-conflicting demands of theoretical sophistication, empirically demonstrated validity and practical efficiency. Key issues include articulating the cognitive goals of history education, the relationship between content and procedural knowledge, the impact of students' language literacy on history assessments, and methods of validation in both large scale and classroom assessments. *New Directions in Assessing Historical Thinking* is a critical, research-oriented resource that will advance the conceptualization, design and validation of the next generation of history assessments.

Building Intelligent Interactive Tutors Beverly Park Woolf. 2010-07-28 *Building Intelligent Interactive Tutors* discusses educational systems that assess a student's knowledge and are adaptive to a student's learning needs. The impact of computers has not been generally felt in education due to lack of hardware, teacher training, and sophisticated software. and because current instructional software is neither truly responsive to student needs nor flexible enough to emulate teaching. Dr. Woolf taps into 20 years of research on intelligent tutors to bring designers and developers a broad range of issues and methods that produce the best intelligent learning environments possible, whether for classroom or life-long learning. The book describes multidisciplinary approaches to using computers for teaching, reports on research, development, and real-world experiences, and discusses intelligent tutors, web-based learning systems, adaptive learning systems, intelligent agents and intelligent multimedia. It is recommended for professionals, graduate students, and others in computer science and educational technology who are developing online tutoring systems to support e-learning, and who want to build intelligence into the system. Combines both theory and practice to offer most in-depth and up-to-date treatment of intelligent tutoring systems available. Presents powerful drivers of virtual teaching systems, including cognitive science, artificial intelligence, and the Internet. Features algorithmic material that enables programmers and researchers to design building components and intelligent systems.

The Self-Directed Teacher David Nunan, Clarice Lamb. 1996-01-26 Advances in second language teaching methodology, including new emphases on communicative language teaching and learner-centeredness, have significantly changed the roles teachers play in the classroom, making ever greater demands upon their classroom management skills. For Nunan and Lamb, management refers to the planning and creation of a positive pedagogical environment which facilitates learning. They focus on the kinds of professional decisions teachers must make to ensure that learning takes place effectively. The ultimate aim of the book is to help teachers and teachers-in-preparation become self-directed by providing them with the knowledge and skills needed to take effective control of the teaching and learning processes in their classrooms. The *Self-directed Teacher* prepares teachers to make independent decisions in key areas such as lesson planning, teacher talk, group work, error correction, resource management, and evaluation. The text uses a task-based approach, and the material presented is well supported by theory and research.
