Programming for Electrical Engineers James Squire, Julie Phillips Brown. 2020-07-08 Programming for Electrical Engineers: MATLAB and Spice introduces beginning engineering students to programming in Matlab and Spice through engaged, problem-based learning and dedicated electrical and computer engineering content. The book draws its problems and examples specifically from electrical and computer engineering, covering such topics as circuit analysis, signal processing, and filter design. It teaches relevant computational techniques in the context of solving common problems in electrical and computer engineering, including mesh and nodal analysis, Fourier transforms, and phasor analysis. Programming for Electrical

Engineers: MATLAB and Spice is unique among MATLAB textbooks for its dual focus on introductory-level learning and discipline-specific content in electrical and computer engineering. No other textbook on the market currently targets this audience with the same attention to discipline-specific content and engaged learning practices. Although it is primarily an introduction to programming in MATLAB, the book also has a chapter on circuit simulation using Spice, and it includes materials required by ABET Accreditation reviews, such as information on ethics, professional development, and lifelong learning. Discipline-specific: Introduces Electrical and Computer Engineering-specific topics, such as phasor analysis and complex exponentials, that are not covered in generic engineering Matlab texts Accessible: Pedagogically appropriate for freshmen and sophomores with little or no prior programming experience Scaffolded content: Addresses both script and functions but emphasizes the use of functions since scripts with non-scoped variables are less-commonly encountered after introductory courses Problem-centric: Introduces MATLAB commands as needed to solve progressively more complex EE/ECE-specific problems, and includes over 100 embedded, in-chapter questions to check comprehension in stages and support active learning exercises in the classroom Enrichment callouts: Pro Tip callouts cover common ABET topics, such as ethics and professional development, and Digging Deeper callouts provide optional, more detailed material for interested students

Handbook of Best Practices in Sustainable Development at University Level Walter Leal Filho, Claudio Ruy Portela de Vasconcelos. 2022-07-05 This book gives a special emphasis to state-of-the-art descriptions of approaches, methods, initiatives, and projects from universities, stakeholders, organizations, and civil society across the world, regarding cross-cutting issues in sustainable development. There is a perceived need for mobilizing the various stakeholders when attempting to promote sustainability in higher education and to promote best practices, which may inspire further initiatives. But despite this need, there are a few publications handling this matter in a coherent way. In order to meet the pressing need for publications which may document and disseminate examples of best practice on sustainable development at university level, the “Handbook of Best Practices in Sustainable Development at University Level” is being published. This book is produced by the European School of Sustainability Science and Research (ESSSR), through the Inter-University Sustainable Development Research Programme (IUSDRP) and contains inputs from authors across all geographical regions. The book also discusses examples of initiatives coordinated by universities but involving civil society, the private sector, and public sector (including local, national, and intergovernmental bodies). In particular, it describes practical experiences, partnerships, networks, and training schemes for building capacity aimed at fostering the cause of sustainable development at institutions of higher education. Thanks to its design and the contributions by experts from various areas, it provides a welcome contribution to the literature on sustainable development, and it may inspire further works in this field.

New Developments in Engineering Education for Sustainable Development Walter Leal Filho, Susan Nesbit. 2016-06-23 This book discusses essential approaches and

methods in connection with engineering education for sustainable development. Prepared as a follow-up to the 2015 Engineering Education in Sustainable Development (EESD) Conference held in British Columbia, Canada, it offers the engineering community key information on the latest trends and developments in this important field. Reflecting the need to address the links between formal and informal education, the scholars and professionals who contribute to this book show by means of case studies and projects how the goal of fostering sustainable development in the context of engineering education can be achieved. In particular, they discuss the need for restructuring teaching at engineering-focused institutions of higher education and provide practical examples of how to do so. The book places special emphasis on state-of-the-art descriptions of approaches, methods, initiatives and projects from around the world, illustrating the contribution of engineering and affiliated sciences to sustainable development in various contexts, and at an international scale.

A Career in Statistics Gerald J. Hahn, Necip

Doganaksoy. 2012-08-29 A valuable guide to a successful career

as a statistician A Career in Statistics: Beyond the Numbers

prepares readers for careers in statistics by emphasizing essential

concepts and practices beyond the technical tools provided in standard courses and texts. This insider's guide from internationally recognized applied statisticians helps readers decide whether a career in statistics is right for them, provides hands-on guidance on how to prepare for such a career, and shows how to succeed on the job. The book provides non-technical guidance for a successful career. The authors' extensive industrial experience is supplemented by insights from contributing authors from government and academia, Carol Joyce Blumberg, Leonard M. Gaines, Lynne B. Hare, William Q. Meeker, and Josef Schmee. Following an introductory chapter that provides an overview of the field, the authors discuss the various dimensions of a career in applied statistics in three succinct parts: *The Work of a Statistician* describes the day-to-day activities of applied statisticians in business and industry, official government, and various other application areas, highlighting the work environment and major on-the-job challenges *Preparing for a Successful Career in Statistics* describes the personal traits that characterize successful statisticians, the education that they need to acquire, and approaches for securing the right job *Building a Successful Career as a Statistician* offers practical guidance for addressing key challenges that statisticians face on the job, such as project initiation and execution, effective communication, publicizing successes, ethical considerations, and gathering good data; alternative career paths are also described The book concludes with an in-depth examination of careers for statisticians in academia as well as tips to help them stay on top of their field throughout their careers. Each chapter includes thought-provoking discussion questions and a Major Takeaways section that outlines key concepts. Real-world examples illustrate key points, and an FTP site provides additional information on selected topics. *A Career in Statistics* is an invaluable guide for individuals who are considering or have decided on a career in statistics as well as for statisticians already on the job who want

to accelerate their path to success. It also serves as a suitable book for courses on statistical consulting, statistical practice, and statistics in the workplace at the undergraduate and graduate levels.

Technology, the University and the Community George Bugliarello, Harold A. Simon. 2013-09-03 Technology, the University and the Community: A Study of the Regional Role of Engineering Colleges focuses on the regional role of engineering colleges and suggests some mechanisms for increasing the interaction between the universities, or their colleges of engineering, and the local region. The study examines the problem of not effectively tapping the potential of state universities to bring applied science to the service of state governments. Comprised of four chapters, this book begins with an overview of the engineering college and its environments, together with its two main resources: human beings and information. Traditional views on the roles of engineering colleges are considered, and their impacts on regional development are examined. The next chapter deals with dimensions and models for the various roles of the engineering college and how the activities of the people of the college, including faculty and students, constitute the main areas of impact upon the region. The obstacles that must be overcome to increase the regional involvement of engineering colleges are then discussed by thinking of the university in terms of human and information resources. The final chapter describes some mechanisms for increasing the regional involvement of engineering colleges. This monograph will be of interest to university administrators, local government officials, and educational policymakers.

Best Practices for Credit-bearing Information Literacy Courses Christopher Vance Hollister. 2010 This work is a collection of previously unpublished papers in which contributing authors describe and recommend best practices for creating, developing and teaching credit-bearing information literacy (IL) courses at

the college and university level. Contributors include academic librarians from universities, four-year colleges and community colleges to demonstrate successful IL course endeavors at their respective institutions. It includes several case studies of both classroom and online IL courses; some are elective and some required, some are discipline-specific and others are integrated into academic programs or departments. Contributors discuss useful and effective methods for developing, teaching, assessing and marketing courses. Also included are chapters on theoretical approaches to credit bearing IL courses and their history in higher education. Organized around three themes, create, develop and teach, this book provides practitioners and administrators with a start-to-finish guide to best practices for credit-bearing IL courses.
