New Technologies and Environmental Innovation Joseph Huber.2004-01-01 'Joseph Huber's book contains a wealth of information on technological environmental innovations. The scrutiny of this material leads to powerful conclusions, with which scholars should concern themselves. Highly recommended.' - René Kemp, Maastricht University, The Netherlands 'This timely and impressive volume brings technology back into the centre of discussions and debates on environmental reform. In articulating an ecological modernisation perspective, Joseph Huber presents an inspiring, optimistic and at times provocative assessment of the potential and future role of radical technological innovations in greening production-consumption cycles.' - Arthur P.J. Mol, Wageningen University, The Netherlands In this insightful book, Joseph Huber investigates the life cycle analysis of technological and environmental innovations (TEIs). TEIs are new technologies, products and practices which have benign environmental effects and which can increase eco-efficiency. More

importantly, they can also improve 'metabolic consistency', thus laying the foundations for a sustainable industrial ecology.

Analytical Philosophy of Technology F. Rapp.2012-12-06 Friedrich Rapp, in this magisterial and critical essay on technology, the complex human phenomenon that demands philosophy of science, philosophy of culture, moral insight, and historical sensitivity for its understanding, writes modestly of the grave and tentative situation in the philosophy of technology. Despite the profound thinkers who have devoted time and imagination and rational penetration, despite the massive literature now available, the varied and comparative viewpoints of political, analytic, despite metaphysical, cultural, even esthetic commitments, indeed despite the honest joining of historical and systematic methods of investigation, we are far from a satisfactory understanding of the joys and sorrows, the

achievements and disappointments, of the technological saga of human societies. Professor Rapp has prepared this report on the philosophical understanding of technology for a troubled world; if ever philosophy were needed, it is in the practical attempt to find alternatives among technologies, to foresee dangers and opportunities, to choose with a sense of the possibility of fulfilling humane values. Emerson spoke of the scholar not as a specialist apart, but as 'Man thinking' and Rapp's essay so speaks to all of us, industrial world or third world, engineers or humanists, tired or energetic, fearful or optimistic.

Anachronism and Antiquity Tim Rood, Carol Atack, Tom Phillips. 2020-02-06 This book is a study both of anachronism in antiquity and of anachronism as a vehicle for understanding antiquity. It explores the post-classical origins and changing meanings of the term 'anachronism' as well as the presence of anachronism in all its forms in classical literature, criticism and material objects. Contrary to the position taken by many modern philosophers of history, this book argues that classical antiquity had a rich and varied understanding of historical difference, which is reflected in sophisticated notions of anachronism. This central hypothesis is tested by an examination of attitudes to temporal errors in ancient literary texts and chronological writings and by analysing notions of anachronistic survival and multitemporality. Rather than seeing a sense of anachronism as something that separates modernity from antiquity, the book suggests that in both ancient writings and their modern receptions chronological rupture can be used as a way of creating a dialogue between past and present. With a selection of case-studies and theoretical discussions presented in a manner suitable for scholars and students both of classical antiquity and of modern history, anthropology, and visual culture, the book's ambition is to offer a new conceptual map of antiquity through the notion of anachronism.

The Evolution of American Educational Technology Paul Saettler.2004-03-01 The primary purpose of this book is to trace the theoretical methodological foundations of American educational technology. It must be emphasized that this work is essentially as history of the process of educational technology rather than of products in the form of devices or media. Although media have played an important role in educational technology, the reader should not lose sight of the central process which characterizes and underlies the true historical meaning and function of educational technology. Moreover, the assumption is made that all current theory, methodology, and practice rests upon the heritage of the past. Indeed, a common problem in the field has been the failure, in many instances, to take adequate account of past history in planning for the present or the future. A related purpose of this book is to provide a selective survey of research in educational technology as it relates to the American public schools. Such research reviews are not intended to be comprehensive, but were included because of their historical importance and their relevance in understanding the process of educational technology.

Lotta's Christmas Surprise Astrid Lindgren.1980

Hidden Cities Fabrizio Nevola,David Rosenthal,Nicholas Terpstra.2022-03-02 This groundbreaking collection explores the convergence of the spatial and digital turns through a suite of smartphone apps (Hidden Cities) that present research-led itineraries in early modern cities as public history. The Hidden Cities apps have expanded from an initial case example of Renaissance Florence to a further five historic European cities. This collection considers how the medium structures new methodologies for site-based historical research, while also providing a platform for public history experiences that go beyond typical heritage priorities. It also presents guidelines for user experience design that reconciles the interests of researchers and end users. A central section of the volume presents the underpinning original scholarship that shapes the locative app trails, illustrating how historical research can be translated into public-facing work. The final section examines how history, delivered in the format of geolocated apps, offers new opportunities for collaboration and innovation: from the creation of museums without walls, connecting objects in collections to their original settings, to informing decision-making in city tourism management. Hidden Cities is a valuable resource for upper-level undergraduates, postgraduates, and scholars across a variety of

disciplines including urban history, public history, museum studies, art and architecture, and digital humanities. The Open Access version of this book, available at www.taylorfrancis.com, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license.
