Reality: A Very Short Introduction Jan Westerhoff.2011-11-24 'What is real?' has been one of the key questions of philosophy since its beginning in antiquity. But it is not just a question that philosophers ask. This Very Short Introduction discusses what reality is by looking at a variety of arguments, theories, and thought-experiments from philosophy, physics, and cognitive science.

Metaphysics: A Very Short Introduction Stephen Mumford.2012-08-30 Metaphysics is one of the traditional four main branches of philosophy, alongside ethics, logic and epistemology. It is also an area that continues to attract and hold a fascination for many people yet it is associated with being complex and abstract. For some it is associated with the mystical or religious. For others it is known through the metaphysical poets who talk of love and spirituality. This Very Short Introduction goes right to the heart of the matter, getting to the basic and most important questions of metaphysical thought in order to understand the theory: What are objects? Do colours and shapes have some form of existence? What is it for one thing to cause another rather than just being associated with it? What is possible? Does time pass? By using these questions to initiate thought about the basic issues around substance, properties, changes, causes, possibilities, time, personal identity, nothingness and emergentism, Stephen Mumford provides a clear and simple path through this analytical tradition at the core of philosophical thought. Particle Physics: a Very Short Introduction Frank Close.2023-11-23 Following the discovery of the Higgs boson, Frank Close has produced this major revision to his classic and compelling introduction to the fundamental particles that make up the universe.

Continental Philosophy: A Very Short Introduction Simon Critchley.2001-02-22 Simon Critchley's Very Short Introduction shows that Continental philosophy encompasses a distinct set of philosophical traditions and practices, with a compelling range of problems all too often ignored by the analytic tradition. He discusses the ideas and approaches of philosophers such as Kant, Hegel, Nietzsche, Husserl, Heidegger, Sartre, Habermas, Foucault, and Derrida, and introduces key concepts such as existentialism, nihilism, and phenomenology by explaining their place in the Continental tradition. Ritual: A Very Short Introduction Barry Stephenson.2015-01-28 Ritual is part of what it means to be human. Like sports, music, and drama, ritual defines and enriches culture, putting those who practice it in touch with sources of value and meaning larger than themselves. Ritual is unavoidable, yet it holds a place in modern life that is decidedly ambiguous. What is ritual? What does it do? Is it useful? What are the various kinds of ritual? Is ritual tradition bound and conservative or innovative and transformational? Alongside description of a number of specific rites, this Very Short Introduction explores ritual from both theoretical and historical perspectives. Barry Stephenson focuses on the places where ritual touches everyday life: in politics and power; moments of transformation in the life cycle; as performance and embodiment. He also discusses the boundaries of ritual, and how and why certain behaviors have been studied as ritual while others have not. Stephenson shows how ritual is an important vehicle for group and identity formation; how it generates and transmits beliefs and values; how it can be used to exploit and oppress; and how it has served as a touchstone for thinking about cultural origins and historical change. Encompassing the breadth and depth of modern ritual studies, Barry Stephenson's Very Short Introduction also develops a narrative of ritual's place in social and cultural life. The Gothic: A Very Short Introduction Nick Groom.2012-09-27 The Gothic is wildly diverse. It can refer to ecclesiastical architecture, supernatural fiction, cult horror films, and a distinctive style of rock music. It has influenced political theorists and social reformers, as well as Victorian home décor and contemporary fashion. Nick Groom shows how the Gothic has come to encompass so many meanings by telling the story of the Gothic from the ancient tribe who sacked Rome to the alternative subculture of the present day. This unique Very Short Introduction reveals that the Gothic has predominantly been a way of understanding and responding to the past. Time after time, the Gothic has been invoked in order to reveal what lies behind conventional history. It is a way of disclosing secrets, whether in the constitutional politics of seventeenth-century England or the racial politics of the United States. While contexts change, the Gothic perpetually regards the past with fascination, both yearning and horrified. It reminds us that neither societies nor individuals can escape the consequences of their actions. The anatomy of the Gothic is richly complex and perversely contradictory, and so the thirteen chapters here range deliberately widely. This is the first time that the entire story of the Gothic has been written as a continuous history: from the historians of late antiquity to the gardens of Georgian England, from the mediaeval cult of the macabre to German Expressionist cinema, from Elizabethan Revenge Tragedy to American consumer society, from folk ballads to vampires, from the past to the present. Structuring Mind Sebastian Watzl.2017-03-09 What is attention? How does attention shape consciousness? In an approach that engages with foundational topics in the philosophy of mind, the theory of action, psychology, and the neurosciences this book provides a unified and comprehensive answer to both questions. Sebastian Watzl shows that attention is a central structural feature of the mind. The first half of the book provides an account of the nature of attention. Attention is prioritizing, it consists in regulating priority structures. Attention is not another element of the mind, but constituted by structures that organize, integrate, and coordinate the parts of our mind. Attention thus integrates the perceptual and intellectual, the cognitive and motivational, and the epistemic and practical. The second half of the book concerns the relationship between attention and consciousness. Watzl argues that attentional structure shapes consciousness into what is central and what is peripheral. The center-periphery structure of consciousness cannot be reduced to the structure of how the world appears to the subject. What it is like for us thus goes beyond the way the world appears to us. On this basis, a new view of consciousness is offered. In each conscious experience we actively take a stance on the world we appear to encounter. It is in this sense that our conscious experience is our subjective perspective.

[Dreaming: A Very Short Introduction](#) J. Allan Hobson.2005-04-21 What is dreaming, and what causes it? Why are dreams so strange and why are they so hard to remember? Replacing dream mystique with modern dream science, J. Allan Hobson provides a new and increasingly complete picture of how dreaming is created by the brain. Focusing on dreaming to explain the mechanisms of sleep, this book explores how the new science of dreaming is affecting theories in psychoanalysis, and how it is helping our understanding of the causes of mental illness. J. Allan Hobson investigates his own dreams to illustrate and explain some of the fascinating discoveries of modern sleep science, while challenging some of the traditionally accepted theories about the meaning of dreams. He reveals how dreaming maintains and develops the mind, why we go crazy in our dreams in order to avoid doing so when we are awake, and why sleep is not just good for health but essential for life. Consciousness Susan Blackmore, Emily T. Troscianko. 2018-04-27 Is there a theory that explains the essence of consciousness? Or is consciousness itself an illusion? Am I conscious now? Now considered the 'last great mystery of science', consciousness was once viewed with extreme scepticism and rejected by mainstream scientists. It is now a significant area of research, albeit a contentious one, as well as a rapidly expanding area of study for students of psychology, philosophy, and neuroscience. This edition of *Consciousness*, revised by author team Susan Blackmore and Emily Troscianko, explores the key theories and evidence in consciousness studies ranging from neuroscience and psychology to quantum theories and philosophy. It examines why the term 'consciousness' has no recognised definition and provides an opportunity to delve into personal intuitions about the self, mind, and consciousness. Featuring comprehensive coverage of all core topics in the field, this edition includes: Why the problem of consciousness is so hard Neuroscience and the neural correlates of consciousness Why we might be mistaken about our own minds The apparent difference between conscious and unconscious Theories of attention, free will, and self and other The evolution of consciousness in animals and machines Altered states from meditation to drugs and dreaming Complete with key concept boxes, profiles of well-known thinkers, and questions and activities suitable for both independent study and group work, *Consciousness* provides a complete introduction to this fascinating field. Additional resources are available on the accompanying companion website: www.routledge.com/cw/blackmore

Atheism: A Very Short Introduction Julian Baggini. 2003-06-26 Do you think of atheists as immoral pessimists who live their lives without meaning, purpose, or values? Think again! *Atheism: A Very Short Introduction* sets out to dispel the myths that surround atheism and show how a life without religious belief can be positive, meaningful, and moral.

The Early Modern Subject Udo Thiel. 2011-09-29 Udo Thiel presents a critical evaluation of the understanding of self-consciousness and personal identity in early modern philosophy. He explores over a century of European philosophical debate from Descartes to Hume, and argues that our interest in human subjectivity remains strongly influenced by the conceptual framework of early modern thought.

Consciousness and the Social Brain Michael S. A. Graziano. 2013-08-01 What is consciousness and how can a brain, a mere collection of neurons, create it? In *Consciousness and the Social Brain*, Princeton neuroscientist Michael Graziano lays out an audacious new theory to account for the deepest mystery of them all. The human brain has evolved a complex circuitry that allows it to be socially intelligent. This social machinery has only just begun to be studied in detail. One function of this circuitry is to attribute awareness to others: to compute that person Y is aware of thing X. In Graziano's theory, the machinery that attributes awareness to others also attributes it to oneself. Damage that machinery and you disrupt your own awareness. Graziano discusses the science, the evidence, the philosophy, and the surprising implications of this new theory.

Nothing: A Very Short Introduction Frank Close. 2009-06-25 What is 'the void'? What remains when you take all the matter away? Can empty space - 'nothing' - exist? This text explores the science & history of the elusive void - from Aristotle's theories to black holes & quantum particles, & why our very latest discoveries about the vacuum can tell us extraordinary things about the cosmos.

Introspection and Consciousness Declan Smithies, Daniel Stoljar. 2012-07-11 The topic of introspection stands at the interface between questions in epistemology about the nature of self-knowledge and questions in the philosophy of mind about the nature of consciousness. What is the nature of introspection such that it provides us with a distinctive way of knowing about our own conscious mental states? And what is the nature of consciousness such that we can know about our own conscious mental states by introspection? How should we understand the relationship between consciousness and introspective self-knowledge? Should we explain consciousness in terms of introspective self-knowledge or vice versa? Until recently, questions in epistemology and the philosophy of mind were pursued largely in isolation from one another. This volume aims to integrate these two lines of research by bringing together fourteen new essays and one reprinted essay on the relationship between introspection, self-knowledge, and consciousness.

Anthropocene: A Very Short Introduction Erle C. Ellis. 2018-02-22 The proposal that the impact of humanity on the planet has left a distinct footprint, even on the scale of geological time, has recently gained much ground. Global climate change, shifting global cycles of the weather, widespread pollution, radioactive fallout, plastic accumulation, species invasions, the mass extinction of species - these are just some of the many indicators that we will leave a lasting record in rock, the scientific basis for recognizing new time intervals in Earth's history. The Anthropocene, as the proposed new epoch has been named, is regularly in the news. Even with such robust evidence, the proposal to formally recognize our current time as the Anthropocene remains controversial both inside and outside the scholarly world, kindling intense debates. The reason is clear. The Anthropocene represents far more than just another interval of geologic time. Instead, the Anthropocene has emerged as a powerful new narrative, a concept through which age-old questions about the meaning of nature and even the nature of humanity are being revisited and radically revised. This *Very Short Introduction* explains the science behind the Anthropocene and the many proposals about when to mark its beginning: the nuclear tests of the 1950s? The beginnings of agriculture? The origins of humans as a species? Erle Ellis considers the many ways that the Anthropocene's evolving paradigm is reshaping the sciences, stimulating the humanities, and foregrounding the politics of life on a planet transformed by humans. The Anthropocene remains a work in progress. Is this the story of an unprecedented planetary disaster? Or of newfound wisdom and redemption? Ellis offers an insightful discussion of our role in shaping the planet, and how this will influence our future on many fronts. Consciousness Susan Blackmore. 2013-11-26 Is there a theory that explains the essence of consciousness? Or is consciousness itself just an illusion? The 'last great mystery of science', consciousness is a topic that was banned from serious research for most of the last century, but is now an area of increasing popular interest, as well as a rapidly expanding area of study for students of psychology, philosophy and neuroscience. This ground-breaking textbook by best-selling author Susan Blackmore was the first of its kind to bring together all the major theories of consciousness studies, from those based on neuroscience to those based on quantum theory or Eastern philosophy. The book examines topics such as how subjective experiences arise from objective brain processes, the basic neuroscience of consciousness, altered states of consciousness, out of body and near death experiences and the effects of drugs, dreams and meditation. It also explores the nature of self, the possibility of artificial consciousness in robots, and the question of whether animals are conscious. The new edition has been fully revised to include the latest developments in neuroscience, brain scanning techniques, and artificial consciousness and robotics. The new website includes self-assessment exercises, advanced further reading, flashcards and MCQs. For all those intrigued by what it means to be, to exist, this book could radically transform your understanding of your own consciousness.

Happiness: A Very Short Introduction Daniel M. Haybron. 2013-08-29 Happiness is an everyday term in our lives, and most of us strive to be happy. But defining happiness can be difficult. In this *Very Short Introduction*, Dan Haybron considers the true nature of happiness. By examining what it is, assessing its importance in our lives, and how we can (and should) pursue it, he considers the current thinking on happiness, from psychology to philosophy. Illustrating the diverse routes to happiness, Haybron reflects on contemporary ideas about the pursuit of a good life and considers the influence of social context on our satisfaction and well-being. The Character of Consciousness David J. Chalmers. 2010-10-28 In this book David Chalmers follows up and extends his thoughts and arguments on the nature of consciousness that he first set forth in his groundbreaking

1996 book, *The Conscious Mind*.

Chaos: A Very Short Introduction Leonard Smith.2007-02-22 Chaos exists in systems all around us. Even the simplest system of cause and effect can be subject to chaos, denying us accurate predictions of its behaviour, and sometimes giving rise to astonishing structures of large-scale order. Our growing understanding of Chaos Theory is having fascinating applications in the real world - from technology to global warming, politics, human behaviour, and even gambling on the stock market. Leonard Smith shows that we all have an intuitive understanding of chaotic systems. He uses accessible maths and physics (replacing complex equations with simple examples like pendulums, railway lines, and tossing coins) to explain the theory, and points to numerous examples in philosophy and literature (Edgar Allen Poe, Chang-Tzu, Arthur Conan Doyle) that illuminate the problems. The beauty of fractal patterns and their relation to chaos, as well as the history of chaos, and its uses in the real world and implications for the philosophy of science are all discussed in this Very Short Introduction. Cognitive Neuroscience R. E. Passingham.2016 This volume describes the new field of cognitive neuroscience - the study of what happens in the brain when we perceive, think, reason, remember, and act. Focusing on the human brain, Passingham looks at the most recent research in the field, the modern brain imaging technologies, and what the images can and can't tell us.

In the Theater of Consciousness Bernard J. Baars.1997 Topics like hypnosis, absorbed states of mind, adaptation to trauma, and the human propensity to project expectations on uncertainty, all fit into the expanded theater metaphor.

Free Speech: A Very Short Introduction Nigel Warburton.2009-02-26 'I disapprove of what you say, but I will defend to the death your right to say it' This slogan, attributed to Voltaire, is frequently quoted by defenders of free speech. Yet it is rare to find anyone prepared to defend all expression in every circumstance, especially if the views expressed incite violence. So where do the limits lie? What is the real value of free speech? Here, Nigel Warburton offers a concise guide to important questions facing modern society about the value and limits of free speech: Where should a civilized society draw the line? Should we be free to offend other people's religion? Are there good grounds for censoring pornography? Has the Internet changed everything? This Very Short Introduction is a thought-provoking, accessible, and up-to-date examination of the liberal assumption that free speech is worth preserving at any cost. Thinking and Reasoning: A Very Short Introduction Jonathan St B. T. Evans.2017-09-21 Our extraordinary capacity to reason and solve problems sets us aside from other animals, but our evolved thinking processes also leave us susceptible to bias and error. The study of thinking and reasoning goes back to Aristotle, and was one of the first topics to be studied when psychology separated from philosophy. In this Very Short Introduction Jonathan Evans explores cognitive psychological approaches to understanding the nature of thinking and reasoning, problem solving, and decision making. He shows how our problem solving capabilities are hugely dependent on also having the imagination to ask the right questions, and the ability to see things from a completely new perspective. Beginning by considering the approaches of the behaviourists and the Gestalt psychologists, he moves on to modern explorations of thinking, including hypothetical thinking, conditionals, deduction, rationality, and intuition. Covering the role of past learning, IQ, and cognitive biases, Evans also discusses the idea that there may be two different ways of thinking, arising from our evolutionary history. Philosophy: A Very Short Introduction Edward Craig.2002-02-21 How ought we to live? What really exists? How do we know? This book introduces important themes in ethics, knowledge, and the self, via readings from Plato, Hume, Descartes, Hegel, Darwin, and Buddhist writers. It emphasizes throughout the point of doing philosophy, explains how different areas of philosophy are related, and explores the contexts in which philosophy was and is done. Thought: A Very Short Introduction Tim Bayne.2013-01-31 In this lively Very Short Introduction, Tim Bayne explores the nature of thought. Drawing on research from philosophy, psychology, neuroscience, and anthropology, he examines what we know--and what we don't know--about one of the defining features of human nature: our capacity for thought.--P. Artificial Intelligence: A Very Short Introduction Margaret A. Boden.2018-08-13 The applications of Artificial Intelligence lie all around us; in our homes, schools and offices, in our cinemas, in art galleries and - not least - on the Internet. The results of Artificial Intelligence have been invaluable to biologists, psychologists, and linguists in helping to understand the processes of memory, learning, and language from a fresh angle. As a concept, Artificial Intelligence has fuelled and sharpened the philosophical debates concerning the nature of the mind, intelligence, and the uniqueness of human beings. In this Very Short Introduction, Margaret A. Boden reviews the philosophical and technological challenges raised by Artificial Intelligence, considering whether programs could ever be really intelligent, creative or even conscious, and shows how the pursuit of Artificial Intelligence has helped us to appreciate how human and animal minds are possible. Hermeneutics: A Very Short Introduction Jens Zimmermann.2015-10-22 Hermeneutics is the branch of knowledge that deals with interpretation, a behaviour that is intrinsic to our daily lives. As humans, we decipher the meaning of newspaper articles, books, legal matters, religious texts, political speeches, emails, and even dinner conversations every day. But how is knowledge mediated through these forms? What constitutes the process of interpretation? And how do we draw meaning from the world around us so that we might understand our position in it? In this Very Short Introduction Jens Zimmermann traces the history of hermeneutic theory, setting out its key elements, and demonstrating how they can be applied to a broad range of disciplines: theology; literature; law; and natural and social sciences. Demonstrating the longstanding and wide-ranging necessity of interpretation, Zimmermann reveals its significance in our current social and political landscape. Consciousness Susan Blackmore.2017 Consciousness, the last great mystery for science, remains a hot topic. How can a physical brain create our experience of the world? What creates our identity? Do we really have free will? Could consciousness itself be an illusion? Exciting new developments in brain science are continuing the debates on these issues, and the field has now expanded to include biologists, neuroscientists, psychologists, and philosophers. This controversial book clarifies the potentially confusing arguments, and the major theories, whilst also outlining the amazing pace of discoveries in neuroscience. Covering areas such as the construction of self in the brain, mechanisms of attention, the neural correlates of consciousness, and the physiology of altered states of consciousness, Susan Blackmore highlights our latest findings. The Origin of Consciousness in the Breakdown of the Bicameral Mind Julian Jaynes. 2000-08-15 National Book Award Finalist: "This man's ideas may be the most influential, not to say controversial, of the second half of the twentieth century."—Columbus Dispatch At the heart of this classic, seminal book is Julian Jaynes's still-controversial thesis that human consciousness did not begin far back in animal evolution but instead is a learned process that came about only three thousand years ago and is still developing. The implications of this revolutionary scientific paradigm extend into virtually every aspect of our psychology, our history and culture, our religion—and indeed our future. "Don't be put off by the academic title of Julian Jaynes's *The Origin of Consciousness in the Breakdown of the Bicameral Mind*. Its prose is always lucid and often lyrical...he unfolds his case with the utmost intellectual rigor."—The New York Times "When Julian Jaynes . . . speculates that until late in the twentieth millennium BC men had no consciousness but were automatically obeying the voices of the gods, we are astounded but compelled to follow this remarkable thesis."—John Updike, *The New Yorker* "He is as startling as Freud was in *The Interpretation of Dreams*, and Jaynes is equally as adept at forcing a new view of known human behavior."—*American Journal of Psychiatry*

Knowledge: A Very Short Introduction Jennifer Nagel. 2014-09-25 What is knowledge? How does it differ from mere belief? Do you need to be able to justify a claim in order to count as knowing it? How can we know that the outer world is real and not a dream? Questions like these are ancient ones, and the branch of philosophy dedicated to answering them - epistemology - has been active for thousands of years. In this thought-provoking Very Short Introduction, Jennifer Nagel considers these classic questions alongside new puzzles arising from recent discoveries about humanity, language, and the mind. Nagel explains the formation of major historical theories of knowledge, and shows how contemporary philosophers have developed new ways of understanding knowledge, using ideas from logic, linguistics, and psychology. Covering topics ranging from relativism and the problem of scepticism to the trustworthiness of internet sources, Nagel examines how progress has been made in understanding knowledge, using everyday examples to explain the key issues and debates

Identity Florian Coulmas. 2019 This book introduces identity, one of the most iconic concepts of our time, which is used ubiquitously but rarely explained. It discusses the various uses of 'identity' separately for different fields of study - philosophy, psychology, sociology, gender studies, and linguistics. This book also compares Western concepts and theories of identity with similar concepts in other parts of the world. It explains how contemporary trends in marketization and globalization have made identity increasingly important to us in the last 50 years. This book also outlines the historical background to the concept of identity.

The Oxford Companion to Consciousness Tim Bayne, Axel Cleeremans, Patrick Wilken. 2014 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges. How does the brain's activity result in the rich phenomenology that characterizes our waking life? Are animals conscious? Why did consciousness evolve? How does science proceed to answer such questions? Can we define what consciousness is? Can we measure it? Can we use experimental results to further our understanding of disorders of consciousness, such as those seen in schizophrenia, delirium, or altered states of consciousness? These questions are at the heart of contemporary research in the domain. Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers, but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness. In this light, the Oxford Companion to Consciousness is the most complete authoritative survey of contemporary research on consciousness. Five years in the making and including over 250 concise entries written by leaders in the field, the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain. Structured as an easy-to-use dictionary and extensively cross-referenced, the Companion offers contributions from philosophy of mind to neuroscience, from experimental psychology to clinical findings, so reflecting the profoundly interdisciplinary nature of the domain. Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness. The result is a unique compendium that will prove indispensable to anyone interested in consciousness, from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best characterization of a particular phenomenon.

Psychophysiology of Consciousness Eugene Sokolov, Kirill Chernorizov. 2013-05-17 This is the last major work of Eugene N. Sokolov, Professor of Psychophysiology at Moscow State University from 1950 to 2008. It summarizes the contributions of a lifetime on the neural mechanism of consciousness. Working at the intersection of psychology, neurophysiology and mathematics, Sokolov early introduced the concept of quantifiable 'difference in neuronal activity' and 'cognitive distance' as corresponding metrics in the physical and mental models of reality. He demonstrated the power of multidimensional vector mathematics to represent the neural computations that mediate between the brain's neural model and the mind's mental model of reality. Sokolov and colleagues showed a mathematical commonality among the neuronal mechanisms that mediate the perception of basic features of visual stimuli including color, brightness, line orientation and motion. This led to a general vector model linking perceptual and memory processes to adaptive motor mechanisms. They extended the model to encompass broader, more complex functions, such as the perception of emotions in facial expressions, semantic differences in verbal stimuli and differential executive control mechanisms.

Integrating evidence from human psychophysics, animal neurophysiology and vector mathematics they developed a unified model to characterize quantitatively many complex relations between objective and subjective aspects of reality. Sokolov's studies of neuronal mechanisms of mental phenomena led him to distinguish two categories of neurons: 'consciousness neurons' directly associated with awareness of perceptual, emotional and cognitive events, and neurons that are necessary for, but not directly involved in, conscious processes. The book integrates his findings with major themes shaping twenty-first century understanding of the brain-mind relationship. It relates the findings both to work of other Russian investigators, such as Pavlov, Luria, and Rusinov, and to work of many Western researchers, including von Bekesy, Eccles, Edelman, Ehrenstein, Grossberg, John, Koch and Crick, Ledoux, Llinas, Milner, Penfield, Penrose, Posner, and Schrödinger.

Conversations on Consciousness Susan J. Blackmore. 2007 In *Conversations on Consciousness*, Susan Blackmore interviews some of the great minds of our time, a who's who of eminent thinkers, all of whom have devoted much of their lives to understanding the concept of consciousness. The interviewees, ranging from major philosophers to renowned scientists, talk candidly with Blackmore about some of the key philosophical issues confronting us in a series of conversations that are revealing, insightful, and stimulating. They ruminate on the nature of consciousness (is it something apart from the brain?) and discuss if it is even possible to understand the human mind. Some of these thinkers say no, but most believe that we will pierce the mystery surrounding consciousness, and that neuroscience will provide the key. Blackmore goes beyond the issue of consciousness to ask other intriguing questions: Is there free will? (A question which yields many conflicted replies, with most saying yes and no.) If not, how does this affect the way you live your life; and more broadly, how has your work changed the way you live? Paired with an introduction and extensive glossary that provide helpful background information, these provocative conversations illuminate how some of the greatest minds tackle some of the most difficult questions about human nature.

Consciousness Susan J. Blackmore. 2005 A lively introduction that combines the perspectives of philosophy, psychology and neuroscience - written by the top name in the field, Susan Blackmore.

Time: A Very Short Introduction Jenann Ismael. 2021-10-28 What is time? What does it mean for time to pass? Is it possible to travel in time? What is the difference between the past and future? Until the work of Newton, these questions were purely topics of philosophical speculation. Since then we've learned a great deal about time, and its study has moved from a subject of philosophical reflection to instead became part of the

subject matter of physics. This Very Short Introduction introduces readers to the current physical understanding of the direction of time, from the Second Law of Thermodynamics to the emergence of complexity and life. Jenann Ismael charts the line of development in physical theory from Newton, via Einstein's Theory of Relativity, to the current day. Einstein's innovations led to a vision of time very different from the familiar time of everyday sense. In this new vision, time is one of the dimensions in which the universe is extended alongside the spatial dimensions. The universe appears as a static block of events, in which there is no more a difference between past and future than there is between east and west. Discussing the controversy and philosophical confusion which surrounded the reception of this new vision, Ismael also covers the contemporary mixture of statistical mechanics, cognitive science, and phenomenology that point the way to reconciling the familiar time of everyday sense with the vision of time presented in Einstein's theories. Autobiography: A Very Short Introduction Laura Marcus.2018-05-31 Autobiography is one of the most popular of written forms. From Casanova to Benjamin Franklin to the Kardashians, individuals throughout history have recorded their own lives and experiences. These personal writings are central to the work of literary critics, philosophers, historians and psychologists, who have found in autobiographies from across the centuries not only an understanding of the ways in which lives have been lived, but the most fundamental accounts of what it means to be a self in the world. In this Very Short Introduction Laura Marcus defines what we mean by 'autobiography', and considers its relationship with similar literary forms such as memoirs, journals, letters, diaries, and essays. Analysing the core themes in autobiographical writing, such as confession, conversion and testimony; romanticism and the journeying self; Marcus discusses the autobiographical consciousness (and the roles played by time, memory and identity), and considers the relationship between psychoanalysis and autobiography. Exploring the themes of self-portraiture and performance, Marcus also discusses the ways in which fiction and autobiography have shaped each other. Philosophy of Mind Barbara Gail Montero.2022 Is the neurophysiology of pain all there is to pain? How do words and mental pictures come to represent things in the world? Do computers think, and if so, are their thought processes significantly similar to our thought processes? Or is there something distinctive about human thought that precludes replication in a computer? These are some of the puzzles that motivate the philosophical discipline called philosophy of mind, a central area of philosophy. This Very Short Introduction introduces the philosophy of mind, and looks at some of the most interesting and important topics in this fascinating field, including the mind-body problem and dualism. Barbara Montero also discusses minds other than our own, and the problems associated with defining consciousness in animals, aliens and machines. Considering these and other such thorny issues such as physicalism and intentionality, she demonstrates how questions of the philosophy of mind also infiltrate disciplines outside of philosophy, including psychology, neuroscience, economics, evolutionary biology, and linguistics. As she observes, most everyone, at some time or another, has ruminated over the relation between mind and matter. Causation: A Very Short Introduction Stephen Mumford, Rani Lill Anjum.2013-11-28 Causation is the most fundamental connection in the universe. Without it, there would be no science or technology. There would be no moral responsibility either, as none of our thoughts would be connected with our actions and none of our actions with any consequences. Nor would we have a system of law because blame resides only in someone having caused injury or damage. Any intervention we make in the world around us is premised on there being causal connections that are, to a degree, predictable. It is causation that is at the basis of prediction and also explanation. This Very Short Introduction introduces the key theories of causation and also the surrounding debates and controversies. Do causes produce their effects by guaranteeing them? Do causes have to precede their effects? Can causation be reduced to the forces of physics? And are we right to think of causation as one single thing at all? ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area.
