Technics and Civilization Lewis Mumford. 2010-10-30 Technics and Civilization first presented its compelling history of the machine and critical study of its effects on civilization in 1934—before television, the personal computer, and the Internet even appeared on our periphery. Drawing upon art, science, philosophy, and the history of culture, Lewis Mumford explained the origin of the machine age and traced its social results, asserting that the development of modern technology had its roots in the Middle Ages rather than the Industrial Revolution. Mumford sagely argued that it was the moral, economic, and political choices we made, not the machines that we used, that determined our then industrially driven economy. Equal parts powerful history and polemic criticism, Technics and Civilization was the first comprehensive attempt in English to portray the development of the machine age over the last thousand years—and to predict the pull the technological still holds over us today. “The questions posed in the first paragraph of Technics and Civilization still deserve our attention, nearly three quarters of a century after they were written.”—Journal of Technology and Culture

New Strategies Combating Bacterial Infection Iqbal Ahmad, Farrukh Aqil. 2008-11-21 Combating bacterial infections calls for a multidisciplinary approach and this is what is on offer here. Written by an experienced international team of researchers from various fields ranging from biotechnology to traditional medicine, the book provides complete and comprehensive coverage of topics relevant to new antibacterial drugs. This ready reference and handbook adopts a novel approach, focusing on combating multi-drug resistance in bacteria by developing antibacterials with new target sites, using new advances in drug discovery as well as natural products. Divided into three sections, the first describes the problem of drug resistance and the need for new drugs, while the second treats recent trends and new classes of drugs, including relevant developments in transcriptomics and proteomics leading to new antimicrobial drug discovery, and a new generation of antibiotics and non-antibiotics. The third section on natural products discusses the antibacterial action of phytochemicals, plant extracts, essential oils and honey as well as the role of probiotics in bacterial infections. Invaluable to students of medicine, pharmaceutical sciences, phytomedicine and microbiology and all those wanting to know about the possibilities and limitations of new antibacterial drugs. Furthermore, its coverage of plants and other natural products makes this relevant to the pharmaceutical and herbal industries.

Climate Impacts on the Baltic Sea: From Science to Policy Marcus Reckermann. 2014-05-09 The Baltic Sea area is an old cultural landscape with a well developed international framework for monitoring, assessing and managing its marine ecosystems. It provides a good case study for other regions where such management is being set up. The chapters in this book are based on lectures given at a summer school on the Baltic Sea island of Bornholm in the summer of 2009. They cover a range of topics, spanning from detailed descriptions of political agreements that protect the marine environment, to basic modelling instructions, to an assessment of the possible impacts of climate change on the marine ecosystem, to a reflection on the role of climate scientists and their

responsibility in society. This interdisciplinary book is primarily directed at students and lecturers of the environmental disciplines to provide an overview of the possible impacts of climate change on the Baltic Sea. It is also intended to serve as a background reference for scientists and policy makers, both for the Baltic Sea area and more generally. The book is a contribution to the BALTEX programme and to the BONUS+ projects ECOSUPPORT and Baltic-C.

Rave Culture and Religion Graham St John.2004-06-01 The collection provides insights on developments in post-traditional religiosity (especially 'New Age' and 'Neo-Paganism') through studies of rave's Gnostic narratives of ascensionism and re-enchantment, explorations of the embodied spirituality and millennialist predispositions of dance culture, and investigations of transnational digital-art countercultures manifesting at geographic locations as diverse as Goa, India, and Nevada's Burning Man festival. Contributors examine raving as a new religious or revitalization movement; a powerful locus of sacrifice and transgression; a lived bodily experience; a practice comparable with world entheogenic rituals; and as evidencing a new Orientalism. Rave Culture and Religion will be essential reading for advanced students and academics in the fields of sociology, cultural studies and religious studies.

Expletives in Existentials Jutta Hartmann.2008 This thesis refutes the generally accepted claim within Generative Grammar that English there is an expletive (meaningless element) that is only present to satisfy a syntactic requirement. Instead it is argued that there is a proform that picks up a situation (or location) from the context. There is a part of the predication structure in existential sentences, which state about the situation that it contains an individual (or amount of a property) specified by the postverbal noun phrase. New data that are relevant for the definiteness effect are presented and it is demonstrated that we need to distinguish between two types of there-sentences: the results of a Magnitude Estimation Experiment for example show that these so-called there-BE and there-V sentences behave differently with respect to wh-movement (among other differences). Therefore, the two construction types are analysed differently: in there-BE sentences, there is proposed to function as the subject of predication, whereas it functions as the predicate in there-V sentences (just like in the locative inversion construction). The thesis concludes with applying the result of the investigation of English there to German da, and shows that also da is a proform that can pick up locations, times and complex situations in the context. The study offers new insights into the analysis of existential sentences and has implications for the analysis of potential subject positions, the EPP, and the classification of expletives in the Germanic languages. It is therefore interesting for scholars working in these fields and syntax in general.--P. [4] of cover.

Collective Memory and Dutch East Indies DOOLAN.2021-09-27 This book examines the afterlife of decolonization in the collective memory of the Netherlands. It offers a new perspective on the cultural history of representing the decolonization of the Dutch East Indies, and maps out how a contested collective memory was shaped. Taking a transdisciplinary approach and applying several theoretical frames from literary studies, sociology, cultural anthropology and film theory, the author reveals how mediated memories contributed to a process of what he calls unremembering. He analyses in detail a broad variety of sources, including novels, films, documentaries, radio interviews, memoirs and historical studies, to reveal how five decades of representing and remembering decolonization fed into an unremembering by which some key notions were silenced or ignored. The author concludes that historians, or the historical guild, bear much responsibility for the unremembering of decolonization in Dutch collective memory.

Innovative Models for Sustainable Development in Emerging African Countries Niccolò Aste, Stefano Della Torre, Cinzia Talamo, Rajendra Singh Adhikari, Corinna Rossi. 2019-12-30 This open access book explores key issues and presents recent case studies in areas of importance for the transition to a circular model of development in emerging African countries that will minimize resource consumption and waste production. The topics covered include the development of sustainable housing models, energy and environmental issues in building design and technical systems, recycling for a sustainable future, models for humanitarian emergencies, and low-cost and web-based digital tools with applications in architecture and archaeology. The aim is to contribute to a necessary paradigm shift with respect to urban planning and usage of territories, moving from a linear urban metabolism based on the "take, make, dispose" approach to a circular metabolism. Such a change requires a focus on the relationship between the architectural, urban, and physical aspects of new developments, climate, and energy demand, as well as the identification and integration of strategies and infrastructures to achieve a high level of efficiency and self-sufficiency. The book will appeal to all with an interest in sustainable development in the African context.

Management of rare adult tumours Yazid Belkacemi, René-Olivier Mirimanoff, Mahmut Ozsahin. 2011-02-02 Why a book dedicated to rare cancer management? Given the large variety of rare cancers, they take up a significant part of our daily practice. Therefore, we owe it to our patients with rare tumours that we use the knowledge gained in the treatment of the more common cancers to provide them with a better future. This knowledge comes from recent developments in molecular diagnostics, systemic treatments with new drugs and targeted therapies together with advanced technologies in the areas of radiology and radiation therapy. Our authors have analysed the literature and recommend treatments for rare cancers based on results from past studies. We hope that this book will be an aid to those treating rare cancer cases about which, up to now, little has been published, and will reassure our patients that they have not been forgotten.

Advances in Cleaner Production. Volume 2 Biagio F. Giannetti,Feni Agostinho,Silvia H. Bonillo.2015-02 Cleaner Production is an emerging field of research that comprises concepts and methodologies from different disciplines in a problem-oriented manner. Research efforts are often concentrated in a variety of sectoral domains; and, for understanding the global change which embraces a variety of processes on several scales, a variety of environmental and sustainability aspects can be addressed. This book brings contributions from researchers that participated in editions of the International Workshop Advances in Cleaner Production (www.advancesincleanerproduction.net) held in São Paulo, Brazil. The book includes contributions from researchers from various countries for the development of Cleaner Production. Divided into three sections, the book addresses national experiences for the implementation of CP programs, research related to the metrics used to assess the effects of CP initiatives in the production sector and discussions that emerge before and after the implementation of these programs. Methodological approaches presented can be useful in the design and management of production systems, for policy development, environmental risk reduction, and prevention/mitigation strategies.

African Herbal Pharmacopoeia Thomas Brendler.2010 The African Herbal Pharmacopoeia (AfrHP) provides comprehensive, up to date botanical, commercial and phytochemical information on over fifty of the most important African medicinal plants. The technical data were made on plant samples sourced from across the continent. These monographs prepared by leading African scientists, have been reviewed by international experts. Additional data includes micro morphology of the plant material, distribution maps and TLC Chromatograms. These data are crucial for producers, collectors and traders in medicinal plants and extracts as well as researchers, manufacturers and practitioners. The scope, quality and standard of these herbal monographs are comparable to those prepared in Europe, North America and Asia. Whilst this is the very first edition, it is being proposed to proceed to a second edition, quickly, as more plant species will be covered.

Ecoregionalism Jon Marco Church.2020-05-25 This book provides a comprehensive understanding of environmental regionalism at the international level, analyzing the concept and identifying recurring patterns from six in-depth case studies. While ecoregions or environmental regions are defined on ecological boundaries rather than administrative criteria, ecoregionalism is the idea that regional dynamics should cluster around ecoregions, while ecoregionalization is the tendency of regional dynamics to cluster around ecoregions. Focusing on the international level, this book presents six cases of ecoregional processes from around the world and the regional environmental agreements: two are terrestrial, the Alps and the Andes; two are marine, the Mediterranean Sea and the Baltic Sea; two are related to freshwater ecosystems: the Amu Darya in Central Asia and the Great Lakes in North America. The book analyzes both ecoregional processes focused on the environment, as well as intersectoral ecoregional processes. The case studies are analyzed based on the ecoregional governance framework, developed by the author for this book. Despite the diversity of context, the similarity of the governance system of the six cases is striking. Several recurring patterns have been identified, which may also extend to the subnational level. They are not design principles, but may be taken into consideration for the design or redesign of current and future regional environmental agreements and processes. This book will be of great interest to students and scholars of environmental politics, natural resource management, spatial planning and international relations.

High Altitude Physiology and Medicine W. Brendel,R. A. Zink.2012-12-06 High altitude physiology and medicine has again become important. The exceptional achievements of mountaineers who have climbed nearly all peaks over 8,000 m without breathing equipment raise the question of maximal adaptation capacity of man to low oxygen pressures. More importantly, the increase in tourism in the Andes and the Himalayas brings over 10,000 people to sites at altitudes above 4,000 and 5,000 m each year. At such heights several kinds of high altitude diseases are likely to occur, and these complications require detailed medical investigations. Medical authorities need to inform both mountaineers and tourists as to how great a physical burden can be taken in the mountain environment without risk to health. Physicians need to know what kind of prophylaxis is to be employed at high altitudes to prevent the development of diseases and what therapeutic measures should be used once high altitude diseases have occurred. Moreover, the physical condition of the indigenous population living at higher altitudes such as the Andes and the Himalayas, who are exposed continuously to the stress of high altitude, requires our attention. We have become familiar with symptoms characteristic of chronic high-altitude disease: under special conditions this population has a tendency to develop pulmonary hypertension, which is associated with pulmonary edema, pulmonary congestion, and right heart failure.

A Grammar of Modern Breton Ian J. Press.2011-05-12 The series builds an extensive collection of high quality descriptions of languages around the world. Each volume offers a comprehensive grammatical description of a single language together with fully analyzed sample texts and, if appropriate, a word list and other relevant information which is available on the language in question. There are no restrictions as to language family or area, and although special attention is paid to hitherto undescribed languages, new and valuable treatments of better known languages are also included. No theoretical model is imposed on the authors; the only criterion is a high standard

of scientific quality.

The resulting survey will provide a firm basis upon which other students may build their work, whether they seek to decipher the text or simply to learn more about the problem.
