Mount Vernon each year—drawn to the stature and beauty of Washington's family estate. Art historian Joseph Manca systematically examines Mount Vernon—its stylistic, moral, and historical dimensions—offering a complete picture of this national treasure and the man behind its enduring design. Manca brings to light a Washington deeply influenced by his wide travels in colonial America, with a broader architectural knowledge than previously suspected, and with a philosophy that informed his aesthetic sensibility. Washington believed that design choices and personal character mesh to form an ethic of virtue and fulfillment and that art is inextricably linked with moral and social concerns. Manca examines how these ideas shaped the material culture of Mount Vernon. Based on careful study of Washington's personal diaries and correspondence and on the lively accounts of visitors to his estate, this richly illustrated book introduces a George Washington unfamiliar to many readers—an avid art collector, amateur architect, and leading landscape designer of his time.

Making up Numbers: A History of Invention in Mathematics

Ekkehard Kopp.2020-10-23 Making up Numbers: A History of Invention in Mathematics offers a detailed but accessible account of a wide range of mathematical ideas. Starting with elementary concepts, it leads the reader towards aspects of current mathematical research. The book explains how conceptual hurdles in the development of numbers and number systems were overcome in the course of history, from Babylon to Classical Greece, from the Middle Ages to the Renaissance, and so to the nineteenth and twentieth centuries. The narrative moves from the Pythagorean insistence on positive multiples to the gradual acceptance of negative numbers, irrationals and complex numbers as essential tools in quantitative analysis. Within this chronological framework, chapters are organised thematically, covering a variety of topics and contexts: writing and solving equations, geometric construction, coordinates and complex numbers, perceptions of 'infinity' and its permissible uses in mathematics, number systems, and evolving views of the role of axioms. Through this approach, the author demonstrates that changes in our understanding of numbers have often relied on the breaking of long-held conventions to make way for new inventions at once providing greater clarity and widening mathematical horizons. Viewed from this historical perspective, mathematical abstraction emerges as neither mysterious nor immutable, but as a contingent, developing human activity. Making up Numbers will be of great interest to undergraduate and A-level students of mathematics, as well as secondary school teachers of the subject. In virtue of its detailed treatment of mathematical ideas, it will be of value to anyone seeking to learn more about the development
