Manifesto Mike Busch.2014-07-07 "There's a dirty little secret about aviation maintenance: it often breaks aircraft instead of fixing them." "Manifesto" is the much-anticipated first book from renowned aviation columnist and speaker Mike Busch. Written in typical no-nonsense style, it lays out the basis of Mike's "minimalist" maintenance philosophy for owner-flown general aviation aircraft. An owner who follows the book's guidance can save a small fortune on maintenance costs and end up with a safer, more reliable aircraft. Owners are advised to perform the absolute least amount of maintenance required to make their aircraft safe, reliable and legal... and nothing more. The book explains in detail why engine and propeller TBOs and most other manufacturer-prescribed maintenance intervals should be disregarded. And "Manifesto" explains exactly how to do it. About the Author: Mike Busch is arguably the best-known A&P/IA in general aviation. In 2008, he was honored by the FAA as "National Aviation Maintenance Technician of the Year." Mike has been a prolific aviation writer for more than four decades. His "Savvy Aviator" columns have appeared in numerous publications including EAA Sport Aviation, AOPA's Opinion Leader's Blog, AVweb, and magazines for the three largest GA type clubs (ABS, CPA, and COPA). He is renowned for his free monthly maintenance webinars and his standing-room-only forums at EAA AirVenture Oshkosh. Mike has been a pilot and aircraft owner for 45 years with 7,500+ hours logged, and he is a CFIA/I/ME. He's founder and CEO of Savvy Aircraft Maintenance Management, Inc., the world's largest firm providing maintenance-management services for owner-flown aircraft.

Defense Modeling, Simulation, and Analysis National Research Council,Division on Engineering and Physical Sciences,Board on Mathematical Sciences and Their Applications,Committee on Modeling and Simulation for Defense Transformation.2006-09-22 Modeling, simulation, and analysis (MS&A) is a crucial tool for military affairs. MS&A is one of the announced pillars of a strategy for transforming the U.S. military. Yet changes in the enterprise of MS&A have not kept pace with the new demands arising from rapid changes in DOD processes and missions or with the rapid changes in the technology available to meet those demands. To help address those concerns, DOD asked the NRC to identify shortcomings in current practice of MS&A and suggest where and how they should be resolved. This report provides an assessment of the changing mission of DOD and environment in which it must operate, an identification of high-level opportunities for MS&A research to address the expanded mission, approaches for improving the interface between MS&A practitioners and decision makers, a discussion of training and continuing education of MS&A practitioners, and an examination of the need for coordinated military science research to support MS&A.

Mike Busch on Engines Mike Busch, Mike Busch A&P/IA.2018-05-12 The risk of engine failure is greatest when your engine is young, NOT when it's old. You should worry more about pediatrics than geriatrics. -Mike Busch A&P/IA Mike Busch on Engines expands the iconoclastic philosophy of his groundbreaking first book Manifesto to the design, operation, condition monitoring, maintenance and troubleshooting of piston aircraft engines. Busch begins with the history and theory of four-stroke spark-ignition engines. He describes the construction of both the top end (cylinders) and bottom end (inside the case), and functioning of key systems (lubrication, ignition, carburetion, fuel injection, turbocharging). He reviews modern engine leaning technique (which your POH probably has all wrong), and provides a detailed blueprint for maximizing the life of your engine. The second half presents a 21st-century approach to health assessment, maintenance, overhaul and troubleshooting. Busch explains how modern condition monitoring tools-like borescopy, oil analysis and digital engine monitor data analysis-allow you to extend engine life and overhaul strictly on-condition rather than at an arbitrary TBO. The section devoted to troubleshooting problems like rough running, high oil consumption, temperamental ignition and turbocharging issues is worth its weight in gold. If you want your engine to live long and prosper, you need this book.

Working for Wildlife Ross Galbreath.1993 ... Describes the development of wildlife administration and management in New Zealand which led to this combination of functions in the Wildlife Service, and the changes in attitudes towards wildlife and conservation which eventually in 1987 brought about its replacement. Against this background of shifting ideas and policies, Working for wildlife also presents the exploits and achievements of the dedicated band of Wildlife officers. They were pre-eminently people of action rather than bureaucratic administrators: fisheries technicians wading in chilly streams to record and measure migrating trout; fauna conservation field officers and scientists searching for the last of the kakapo in the precipitous Fiordland country, or scaling the cliffs of Little Mangere Island to find ways to rescue the black robins ; deer-cullers in the hills fighting the Deer Menace. They were the original good keen men; the exploits of those who worked for Wildlife will stir the pride of all New Zealanders.--Back cover.

Performance of Light Aircraft John T. Lowry.1999 Pilots, aviation students, kitplane builders, aircraft fleet operators and aeronautical engineers can all determine how their propeller-driven airplanes will perform, under any conditions, by using the step-by-step bootstrap approach introduced in this book. A few routine flying manoeuvres (climbs, glides, a level speed run) will give the necessary nine numbers. High-school level calculations then give performance numbers with much greater detail and accuracy than many other methods - for the reader's individual aircraft.

Andreas and the Ambiguity of Courtly Love Paolo Cherchi.1994 A resolution to the vexed problem whether a troubadour's love is erotic or spiritual is offered by Paolo Cherchi through a new reading of Andreas Capellanus' De Amore (written around 1186-1196). He suggests that Andreas, using a rhetorical strategy that creates ambiguity, condemns courtly love because its claim that passion generates virtue is untenable and deceitful. Although Andreas grasped the core of the courtly love 'system,' namely, the relation between passion and ethics, he failed to consider the notion of mezura, that courtly virtue through which troubadours transformed nature into culture, and erotic passion into social discourse. Cherchi offers an innovative interpretation and a close reading of selected poems. He traces the history of Provençal lyric poetry, highlighting some of the significant personalities and movements.
